11 Errors in PDT 1.0 ..... 59

## Preface

We are pleased to publish the first version of the manual for morphological annotation of Czech sentences. We believe that such guidelines can be of use to the users of Prague Dependency Treebank 1.0 (PDT 1.0), as well as for preparation of new data.

Let us recall the most important steps we passed in order to get about two million morphologically annotated words (PDT 1.0). At the very beginning, we put together a team of eight annotators - we did introduce them to a system of morphological tags we designed to describe Czech morphological properties; we also introduced them a morphological analyzer for processing isolated words we use (as a preprocessing step), and, last but not least, we did rely on their knowledge of Czech morphology they have acquired while studying at secondary school, i.e. we did not offer them any annotation guidelines.

One can assume that this strategy is too hazardous - how to deal with discrepancies the annotators produce to ensure the consistency of annotation? First, two annotators annotated each text file. Then, by a "blind" automatic procedure (no matter what word is processed - just comparing two strings) we detected words annotated differently. Consequently, the only one annotator (as a member of just two-member team) handled these cases and, also, checked the morphological annotations against the syntactic-analytical annotations. This way we replaced the absence of annotation guidelines by sequential elimination of discrepancies across both the morphological and syntactic-analytical levels of annotation.

Along the way we were writing this annotation manual. It is not intended as a comprehensive guide to the morphological annotation of Czech sentences (in contrast to the manual for syntactic-analytical annotations). The authors concentrate "only" on those cases which caused the most ambiguities and problems while annotating PDT 1.0. The ongoing effort is directed to the treating of not- yet-solved problematic cases in accord with the conventions of automatic morphological analyzer.

The morphological annotation of PDT 1.0 was carried out in the framework of experimental verification of the definition of formal representation of the analysis of Czech sentences (the project GAČR 405/96/0198, "Formal representation of language structures"). The material obtained in this way (data) is used in many domains of research in computational linguistics, above all as basic (training) data in projects of the automatic language analysis, the MŠMT research project MSM113000006, the "Laboratory for Language Data Processing" (the MŠMT project VS961510) and the Center for Computational Linguistics (the MŠMT project LN00A063). These data have been also used as verification material for various partial projects within the complex program GAČR 405/96/K214 ("Czech Language in Computer Age"). The "Center for Computational Linguistics" project financially supported work on these morphological annotation guidelines.

We are grateful to Petr Pajas - this document "as it is" would not appear without his XML and LaTex skills.

## Typographical conventions

Vertical bar on the outer side of the page is used to highlight comments we make or suggestions we propose.
Gray is used to highlight something what should be checked.

## Chapter 1

## Introduction

Sometimes, the writer uses the word incorrectly - e.g. a name of a woman as a name of a man, surname as a first name, etc. it is necessary to annotate the real usage not the shouldbe usage.

Maybe it should be somehow marked, if we encounter it.
To get an idea what a foreign name, etc. mean it is useful to try to find using an internet portal, in an encyclopedia, on a map, etc. During annotation, we have found the following internet links useful:

## Portals

http://www.seznam.cz - for Czech products, companies
http://search.seznam.cz/search.cgi?mod=f\&hlp=y-for Czech companies
http://www.google.com
http://www.altavista.com (shop section for various searching products)

## Encyclopedias

http://www.britannica.com
http://www.encyclopedia.com
http://www.encarta.msn.com

## Dictionaries

http://dictionary.oed.com/entrance.dtl-Oxford English Dictionary
http://slovnik.seznam.cz-various dictionaries

## Maps

http://mapy.atlas.cz-Czechia
http://www.mapquest.com/maps - U.S.A and the world

## Chapter 2

## Lemma and tag structure

### 2.1 Lemma structure

Lemma in PDT 1.0 has two parts. First part, the lemma proper, has to be a unique identifier of the lexical item. Usually it is the base form (e.g. infinitive for a verb) of the word, possibly followed by a number distinguishing different lemmas with the same base forms. Second part (optional) is not part of the identifier and contains additional information about the lemma, e.g. semantic or derivational information.

Note: There is a convention that if lemmas use numbers to distinguish lexical items with the same base form, they all have to use them- i.e. instead of sets of lemmas $\{X, X-1, X-2\}$ or $\{\mathrm{X}, \mathrm{X}-2, \mathrm{X}-3\}$, there should be a set $\{\mathrm{X}-1, \mathrm{X}-2, \mathrm{X}-3\}$

Note: The lemmas having different semantic suffixes should have different numbers.
In this manual we behave as the annotator. We try to mark such improper numbers by roman font (other part of the lemma is in italics). For example stop in akce Stop million will be marked as stop-1_;m and not stop-1_;m).

Table 2.1: Examples

| Whole lemma | Lemma proper | Second part |
| :---: | :---: | :---: |
| Chemik | chemik |  |
| maso_^(jídlo_apod.) | maso | -^(jídlo_apod.) |
| Bonn_; $G$ | Bonn | -;G |
| vazba-1_^(obviněného) | vazba-1 | - ${ }^{\text {(obviněného) }}$ |
| vazba-2_^(spojení) | vazba-2 | - ^(spojení) |
| Martinův-1_; $\left.Y_{-} \wedge^{*}{ }^{*} 4-1\right)$ | Martinův-1 | _; $\left.Y_{-}{ }^{(*}{ }^{*} 4-1\right)$ |

### 2.1.1 Derivational Information

The morphological component used in PDT 1.0, handles only inflection, not derivations it means lemmas are rather shallow. However, sometimes the lemma contains information about lemmas it is derived. For example lemmas of possessive adjectives contain information about the noun they are derived from (otci̛v $\leftarrow$ otec). The information is encoded in the following way - how many characters you have to remove from the end, and what string you have to add to get the deeper lemma. Only the proper lemmas are both input and output of this process.

## Following examples illustrate this:

kardinálův_(**2) - remove two letters: kardinál
Karlův_; $Y_{-}^{\wedge}{ }^{(* 3 e l)}$ - remove 3 characters, add "el": Karel
přijetí-2_^(např._návrh)_(*5mout-2) - remove 5 characters, add "mout-2": přijmout-2
Martinův-1_; $Y_{-}^{\prime}\left({ }^{*} 4-1\right)$ - remove 4 characters, add "-1": Martin-1

## Other examples:

Sorosův_;-__^(*2)
chlapcův_へ(*3ec)
Máchův_; $\left.S_{-}^{\wedge} \wedge^{*} 2 a\right)$
Hlinkův-1_;S_ - (*4a-1)
podání__(něco_[někomu]_[někam])_(*3at)
prohlášení_^(*4sit)
protiprávnost_^(*3y)

### 2.1.2 Semantic Information

Some lemmas (esp. names) contain suffixes expressing semantic information about their use, etc.:

G - geographical name: Praha, Ústí nad Labem
Y - given (first) name, formely used as default: Petr, John
S - surname (last name): Dvořák, Zelený, Agassi, Bush
E - name of a nationality: Čech, Kolumbijec
R - name of a product: Tatra (the car),
K - name of a company: Tatra (the company)
m - default - names of mines, stadiums, guerilla bases, etc; also used for functional words in names.

### 2.2 Tag Structure

### 2.2.1 Positional tags

A positional tag is a string of 15 characters. Every position encodes one morphological category using one character (mostly upper case letters or numbers).

| Position | Name | Description |
| :--- | :--- | :--- |
| 1 | POS | Part of speech |
| 2 | SubPOS | Detailed part of speech |
| 3 | Gender | Gender |
| 4 | Number | Number |
| 5 | Case | Case |
| 6 | PossGender | Possessor's gender |
|  |  | continued on next page |

continued from previous page

| Position | Name | Description |
| :--- | :--- | :--- |
| 7 | PossNumber | Possessor's number |
| 8 | Person | Person |
| 9 | Tense | Tense |
| 10 | Grade | Degree of comparison |
| 11 | Negation | Negation |
| 12 | Voice | Voice |
| 13 | Reserve1 | Reserve |
| 14 | Reserve2 | Reserve |
| 15 | Var | Variant, style |

Some of the characters encode aggregation of more atomic values - for example: ' $\mathrm{X}^{\prime}$ means any value, ' $\mathrm{Y}^{\prime}$ means masculine animate ( ${ }^{\prime} \mathrm{M}^{\prime}$ ) or inanimate ( ${ }^{\prime} \mathrm{I}$ '). Dash ( ${ }^{\prime}-\mathrm{B}^{\prime}$ ) means no value (e.g. tense for nouns).

Not all combinations of tag values are possible. There is about 4 K tags ${ }^{1}$.

## Examples:

hraniční: AAIS4----1A---- standard adjective, masc. inanimate, singular, accusative, positive
potok: NNIS4-----A---- noun, masc. inanimate, singular, accusative, positive karikaturistou: NNMS 7-----A---- noun, masc. animate, singular, instrumental, positive ODS: NNFXX-----A---8 noun, feminine, any number, any case, positive, abbreviation podle: RR--2----------- preposition (non vocalized), requiring genitive
volen: VsYS---XX-AP--- verb, passive participle, masculine, singular, any person, any tense, positive, passive

### 2.2.1.1 1 - Part of speech

| Value | Description |
| :--- | :--- |
| A | Adjective |
| C | Numeral |
| D | Adverb |
| I | Interjection |
| J | Conjunction |
| N | Noun |

continued on next page

[^0]continued from previous page

| Value | Description |
| :--- | :--- |
| P | Pronoun |
| V | Verb |
| R | Preposition |
| T | Particle |
| X | Unknown, Not Determined, Unclassifiable |
| Z | Punctuation (also used for the Sentence Boundary token) |

### 2.2.1.2 2 - Detailed part of speech

Further subcategorizes POS. The POS value is uniquely specified by SubPOS value.
Table 2.4: SUBPOS

| Value | Description | POS |
| :---: | :---: | :---: |
| \# | Sentence boundary |  |
|  | Word krát (lit.: times) | C-numeral |
| , | Conjunction subordinate (incl. aby, kdyby in all forms) | J - conjuction |
| \} | Numeral, written using Roman numerals (XIV) | C-numeral |
| : | Punctuation (except for the virtual sentence boundary word \#\#\#, which uses the 2.4 SUBPOS \#) |  |
| $=$ | Number written using digits | C-numeral |
| ? | Numeral kolik (lit. how many/how much) | C - numeral |
| @ | Unrecognized word form | X-unknown |
| , | Conjunction (connecting main clauses, not subordinate) | J conjunction |
| 4 | Relative/interrogative pronoun with adjectival declension of both types (soft and hard) (jaký, který, čí, ..., lit. what, which, whose, ...) | P - pronoun |
| 5 | The pronoun he in forms requested after any preposition (with prefix $n$-: nĕj, nëho, ..., lit. him in various cases) | P - pronoun |
| 6 | Reflexive pronoun se in long forms (sebe, sobě, sebou, lit. myself / yourself / herself / himself in various cases; se is personless) | P - pronoun |

continued on next page
continued from previous page

| Value | Description | POS |
| :---: | :---: | :---: |
| 7 | Reflexive pronouns se (2.8 CASE $=4)$, si $(2.8 \mathrm{CASE}=3)$, plus the same two forms with contracted -s: ses, sis (distinguished by 2.11 PERSON = 2; also number is singular only) This should be done somehow more consistently, virtually any word can have this contracted -s (cos, polívkus, ...) | P - pronoun |
| 8 | Possessive reflexive pronoun sviij (lit. my/your/her/his when the possessor is the subject of the sentence) | P - pronoun |
| 9 | Relative pronoun jenž, již, ... after a preposition ( $n$-: něhož, niž, ..., lit. who) | P - pronoun |
| A | Adjective, general | A - adjective |
| B | Verb, present or future form | V - verb |
| C | Adjective, nominal (short, participial) form rád, schopen, ... | A - adjective |
| D | Pronoun, demonstrative (ten, onen, ..., lit. this, that, that ... over there, ... ) | P - pronoun |
| E | Relative pronoun což (corresponding to English which in subordinate clauses referring to a part of the preceding text) | P - pronoun |
| F | Preposition, part of; never appears isolated, always in a phrase (nehledě (na), vzhledem ( $k$ ), ..., lit. regardless, because of) | R - <br> preposition |
| G | Adjective derived from present transgressive form of a verb | A - adjective |
| H | Personal pronoun, clitical (short) form (mě, mi, $t i, m u, . .$.$) ;$ these forms are used in the second position in a clause (lit. me, you, her, him), even though some of them (mě) might be regularly used anywhere as well | P - pronoun |
| I | Interjections | I interjection |
| J | Relative pronoun jenž, $j i z ̌, ~ . . . ~ n o t ~ a f t e r ~ a ~ p r e p o s i t i o n ~(l i t . ~$ who, whom) | P - pronoun |
| K | Relative/interrogative pronoun kdo (lit. who), incl. forms with affixes $-z$ and $-s$ (affixes are distinguished by the category 2.16 VAR (for -z) and 2.11 PERSON (for -s)) | P - pronoun |
| L | Pronoun, indefinite všechnen, sám (lit. all, alone) | P - pronoun |
| M | Adjective derived from verbal past transgressive form | A - adjective |
| N | Noun (general) | N - noun |
| O | Pronoun svi̛j, nesvůj, tentam alone (lit. own self, not-in-mood, gone) | P - pronoun |

continued on next page
continued from previous page

| Value | Description | POS |
| :---: | :---: | :---: |
| P | Personal pronoun já, ty, on (lit. I, you, he ) (incl. forms with the enclitic -s, e.g. tys, lit. you're); gender position is used for third person to distinguish on/ona/ono (lit. he/she/it), and number for all three persons | P - pronoun |
| Q | Pronoun relative/interrogative co, copak, cožpak (lit. what, isn't-it-true-that) | P - pronoun |
| R | Preposition (general, without vocalization) | R - <br> preposition |
| S | Pronoun possessive můj, tvůj, jeho (lit. my, your, his); gender position used for third person to distinguish jeho, její, jeho (lit. his, her, its), and number for all three pronouns | P - pronoun |
| T | Particle | T-particle |
| U | Adjective possessive (with the masculine ending -uiv as well as feminine -in) | A - adjective |
| V | Preposition (with vocalization -e or -u): (ve, pode, ku, ..., lit. in, under, to) | Rpreposition |
| W | Pronoun negative (nic, nikdo, nijaký, žádný, ..., lit. nothing, nobody, not-worth-mentioning, no/none) | P - pronoun |
| X | (temporary) Word form recognized, but tag is missing in dictionary due to delays in (asynchronous) dictionary creation |  |
| Y | Pronoun relative/interrogative co as an enclitic (after a preposition) (oč, nač, zač, lit. about what, on/onto what, after/for what) | P - pronoun |
| Z | Pronoun indefinite (nĕjaký, nëkterý, čikoli, cosi, ..., lit. some, some, anybody's, something) | P - pronoun |
| a | Numeral, indefinite (mnoho, málo, tolik, nëkolik, kdovíkolik, ..., lit. much/many, little/few, that much/many, some (number of), who-knows-how-much/many) | C - numeral |
| b | Adverb (without a possibility to form negation and degrees of comparison, e.g. pozadu, naplocho, ..., lit. behind, flatly); i.e. both the 2.14 NEGATION as well as the 2.13 GRADE attributes in the same tag are marked by - (Not applicable) | D - adverb |
| c | Conditional (of the verb být (lit. to be) only) (by, bych, bys, bychom, byste, lit. would) | V - verb |
| d | Numeral, generic with adjectival declension (dvojí, desaterý, ..., lit. two-kinds/..., ten-...) | C - numeral |
| e | Verb, transgressive present (endings -e/-ě, -íc, -íce) | V - verb |

continued on next page
continued from previous page

| Value | Description | POS |
| :---: | :---: | :---: |
| f | Verb, infinitive | V - verb |
| g | Adverb, forming negation (2.14 NEGATION set to A/N) and degrees of comparison 2.13 GRADE set to $1 / 2 / 3$ (comparative/superlative), e.g. velký, $z a \backslash-j \hat{\imath} \backslash-m a \backslash-v y ́, ~ . . ., ~ l i t . ~$ big, interesting |  |
| h | Numeral, generic; only jedny and nejedny (lit. one-kind/sort-of, not-only-one-kind/sort-of) | C-numeral |
| i | Verb, imperative form | V - verb |
| j | Numeral, generic greater than or equal to 4 used as a syntactic noun (čtvero, desatero, ..., lit. four-kinds/sorts-of, ten-...) | C-numeral |
| k | Numeral, generic greater than or equal to 4 used as a syntactic adjective, short form (čtvery, ..., lit. four-kinds/sorts-of) | C-numeral |
| 1 | Numeral, cardinal jeden, dva, tři, čtyři, půl, ... (lit. one, two, three, four); also sto and tisic (lit. hundred, thousand) if noun declension is not used | C-numeral |
| m | Verb, past transgressive; also archaic present transgressive of perfective verbs (ex.: udělav, lit. (he-)having-done; arch. also udělaje (2.16 VAR $=4$ ), lit. (he-)having-done) | V - verb |
| n | Numeral, cardinal greater than or equal to 5 | C-numeral |
| O | Numeral, multiplicative indefinite (-krát, lit. (times): mnohokrát, tolikrát, ..., lit. many times, that many times) | C-numeral |
| p | Verb, past participle, active (including forms with the enclitic - $s$, lit. 're (are)) | V - verb |
| q | Verb, past participle, active, with the enclitic $-\check{t}$, lit. (perhaps) - could-you-imagine-that? or but-because- (both archaic) | V - verb |
| r | Numeral, ordinal (adjective declension without degrees of comparison) | C-numeral |
| S | Verb, past participle, passive (including forms with the enclitic-s, lit. 're (are)) | V - verb |
| t | Verb, present or future tense, with the enclitic $-t$, lit. (perhaps) -could-you-imagine-that? or but-because- (both archaic) | V - verb |
| u | Numeral, interrogative kolikrát, lit. how many times? | C-numeral |
| v | Numeral, multiplicative, definite (-krát, lit. times: pětkrát, ..., lit. five times) | C-numeral |

continued from previous page

| Value | Description | POS |
| :--- | :--- | :--- |
| w | Numeral, indefinite, adjectival declension (nejeden, tolikátý, <br> ..., lit. not-only-one, so-many-times-repeated) | C-numeral |
| y | Numeral, fraction ending at -ina; used as a noun (pětina, lit. <br> one-fifth) | C-numeral |
| z | Numeral, interrogative kolikátý, lit. what (at-what-position- <br> place-in-a-sequence) | C-numeral |

Table 2.5: Obsolete values

| Value | Description |
| :--- | :--- |
| $!$ | Abbreviation used as an adverb |
| $\cdot$ | Abbreviation used as an adjective |
| $;$ | Abbreviation used as a verb |
| 3 | Abbreviation used as a noun |
| x | Abbreviation used as a numeral |

### 2.2.1.3 3-Gender

| Value | Description |
| :--- | :--- |
| F | Feminine |
| H | $\{\mathrm{F}, \mathrm{N}\}$ - Feminine or Neuter |
| I | Masculine inanimate |
| M | Masculine animate |
| N | Neuter |
| Q | Feminine (with singular only) or Neuter (with plural only); used only with <br> participles and nominal forms of adjectives |
| T | Masculine inanimate or Feminine (plural only); used only with participles <br> and nominal forms of adjectives |
| X | Any |
| Y | \{M, I\} - Masculine (either animate or inanimate) |
| Z | \{M, I, N $\}$ - Not fenimine (i.e., Masculine animate/inanimate or Neuter); <br> only for (some) pronoun forms and certain numerals |

### 2.2.1.4 4 - Number

| Value | Description |
| :--- | :--- |
| D | Dual , e.g. nohama |
| P | Plural, e.g. nohami |
| S | Singular, e.g. noha |
| W | Singular for feminine gender, plural with neuter; can only appear in <br> participle or nominal adjective form with gender value Q |
| X | Any |

2.2.1.5 5 - Case

Table 2.8: CASE

| Value | Description |
| :--- | :--- |
| 1 | Nominative, e.g. žena |
| 2 | Genitive, e.g. ženy |
| 3 | Dative, e.g. ženě |
| 4 | Accusative, e.g. ženu |
| 5 | Vocative, e.g. ženo |
| 6 | Locative, e.g. ženě |
| 7 | Instrumental, e.g. ženou |
| X | Any |

### 2.2.1.6 6 - Possessor's Gender

| Value | Description |
| :--- | :--- |
| F | Feminine, e.g. matčin, jejı́ |
| M | Masculine animate (adjectives only), e.g. otců |
| X | Any |
| Z | $\{\mathrm{M}, \mathrm{I}, \mathrm{N}\}$ - Not feminine, e.g. jeho |

2.2.1.7 7 - Possessor's Number

| Value | Description |
| :--- | :--- |
| P | Plural, e.g. náš |
| S | Singular, e.g. můj |

2.2.1.8 8 - Person

Table 2.11: PERSON

| Value | Description |
| :--- | :--- |
| 1 | 1st person, e.g. píšu, píšeme |
| 2 | 2nd person, e.g. pîšě̌, píšete |
| 3 | 3rd person, e.g. pǐše, píšou |
| $X$ | Any person |

### 2.2.1.9 9 - Tense

| Value | Description |
| :--- | :--- |
| F | Future |
| H | $\{R, P\}$ - Past or Present |
| P | Present |
| R | Past |
| X | Any |

2.2.1.10 10 - Degree of Comparison

Table 2.13: GRADE

| Value | Description |
| :--- | :--- |
| 1 | Positive, e.g. velký |
| 2 | Comparative, e.g. větší |
| 3 | Superlative, e.g. největš̌ |

2.2.1.11 11 - Negation

Table 2.14: NEGATION

| Value | Description |
| :--- | :--- |
| A | Affirmative (not negated), e.g. možný |
| N | Negated, e.g. nemožný |

2.2.1.12 12 - Voice

| Value | Description |
| :--- | :--- |
| A | Active, e.g. pǐ̌ǐící |
| P | Passive, e.g. psaný |

2.2.1.13 15 - Variant

Table 2.16: VAR

| Value | Description |
| :--- | :--- |
| - | Basic variant, standard contemporary style; also used for standard forms <br> allowed for use in writing by the Czech Standard Orthography Rules <br> despite being marked there as colloquial |
| 1 | Variant, second most used (less frequent), still standard |
| 2 | Variant, rarely used, bookish, or archaic |
| 3 | Very archaic, also archaic + colloquial |
| 4 | Very archaic or bookish, but standard at the time |
| 5 | Colloquial, but (almost) tolerated even in public |
| 6 | Colloquial (standard in spoken Czech) |
| 7 | Colloquial (standard in spoken Czech), less frequent variant |
| 8 | Abbreviations |
| 9 | Special uses, e.g. personal pronouns after prepositions etc. |

### 2.2.2 Compact tags

For most (but not all cases) just omit the dashes from positional tags. For more information, see ${ }^{2}$

### 2.2.3 Informal abbreviations

In certain cases (including some places in this manual), the following tag abbreviations are used. Most of them are self-evident (dashes and rarely used fields dropped), as you can see in the following list:

```
Ngnc - noun; NFS1 = NNFS1-----A----
Aagnc - adjective; AAXXX = AAXXX----1A----
Db - adverb; Db = Db-------------
Dg - adverb; Dg = Dg-------1A----
Dgd - adverb; Dga2 = Dg-------2A----
J^ - conjunction; Ј^ = J^--------------
```

[^1]```
\(J,-\) conjunction; \(J,=J,------------\)
Rc, RRc - preposition, RR7 = RR--7
RVc - vocalized preposition, RV7 = RV--7-----------
TT - particle; TT = TT
Ng-8, NNgXX-8 - noun abreviation; NFXX-8 = NNFXX-----A---8
AX-8, AAXXX-8 - adjective abreviation; AAXXX-8 = AAXXX----1A---8
\(\mathrm{Db}-8\) - adverb abreviation; \(\mathrm{Db}-8=\mathrm{Db}-----------8\)
Rc-8, RRC-8 - preposition abreviation; RR7-8 = RR--7--------- 8
```

## Chapter 3

## Names

Proper names (either directly or the lemmas they consist of) have suffixes marking the category of that name:
G - geographical name: Praha, Ústí nad Labem
Y - given (first) name, formely used as default: Petr, John
S - surname (last name): Dvoráák, Zelený, Agassi, Bush
E - name of a nationality: Čech, Kolumbijec
R - name of a product: Tatra (the car),
K - name of a company: Tatra (the company)
m - default - names of mines, stadiums, guerilla bases, etc; also used for functional words in names.

The lemma should start with upper case if the word is always in upper-case in names (Tatra is always in uppercase, but banka not).

Keeping this categorization in the same level as lemmas is quite unsustainable and very unsuitable.

1. In theory every word can occur in any category. For example, new in New York (G), New Jersey Devils (sport club - K), New Jersey Devils cards (product - R), etc. Because it would explode the lexicon, usually common words (besides new and alike, all functional words) have only two lemmas: one for common words and one for all names (using default category m). But such approach is highly unsystematic and works only for a small corpus.
2. But even then, the system is not used consistently - some functional words even do not have the above mentioned two versions (normal and m). For example, nad in Ústí nad Labem, should be nad-2_jm, but there is no such a lemma. Similarly $a$ in $a$.s. should be annotated differently when part of a name of some company and when not, but it is not.
3. Moreover lemmas having different categories are formally not connected, e.g. if you see Martin-3_;K, you do not know if it is derived from Martin-1_; (Martin + Martin, s.r.o) or Martin-2_;G (DS Martin, a.s.).

## Proposed solution:

- The G, K, etc. categories should be independent of the morphology, and should be assigned to phrases on a different level. This would also require some enhancement to the annotation tool DA.
- Only the words that always (i.e. $>90 \%$ or so) belong to some category would marked with that category (e.g. new has no special suffix, England has G).
- Personal name would be annotated as separate lemmas Petr Pánvička - Pánvička_;S not (pánvička)s.
- Names containing name of a person, where the original link is not perceived (usually geographical names that do not contain possessive construction) have separate entries. N.B. that current guidelines require all the following words to be annotated with lemmas containing G (incl. ostrov, and úžina!!)

Columbus (town in Ohio) - Columbus-2_;G not (Columbus-1_;S) ${ }_{\mathrm{G}}$
Martin (town in Slovakia)- Martin-2_; G not (Martin-1_;S) $_{\text {G }}$
Beringova úžina - (Beringův_;S_^(*2) úžina $)_{\mathrm{G}}$ not Beringův-2_;G úžina-2_; $G$
Ostrov Sergeje Kirova - (ostrov Sergej_; Y Kirov-1_;S) ${ }_{\mathrm{G}}$
Kirov (town in Russia) - Kirov-2_;G not (Kirov-1_;S) ${ }_{\mathrm{G}}$

### 3.1 Personal names

Some names are sometimes declined, sometimes not (Bill - o Bill Clintonovi, o Billu Clintonovi, o Billovi). The tag for nondeclined form is NgXXA.

### 3.1.1 von, van, etc.

For names (e.g Ludwig van Beethoven) the van, etc. phrase is perceived as a surname - annotate it that way. For other it is still perceived as geographical name (e.g Kryštof Harant z Polžic a Bezdružic). Of course the borderline is fuzzy.

## Examples:

Ludwig van Beethoven - Ludwig_; $Y$ van-2_,__^(v_hol._jménech) Beethoven_;S
Vincent van Gogh - Vincent_; Y van-2_,__-(v_hol._jménech) Gogh_;S
Kryštof Harant z Polžic a Bezdružic - Kryštof_;Y Harant_;S z-1 Polžice_;G a-1 Bezdružice_;G
Brigida z Háje - Brigida_;Y z-1 Háj_;-G

### 3.1.2 Chinese names

## Usage

The surname precedes the given name. In most cases, the whole name is used (not just the family name). The thing is complicated by the fact, that many Chinese living abroad often change the order of their name or use their given name as a surname, etc. The discussion below can help you to determine, which part of a name is the given name and which part is the surname. If you are in doubt annotate them all as given names $(\mathrm{Y})$.

That was the original recommendation, but probably annotating them as $S$ would be better, because they are often used that way (You can say Clinton for Bill Clinton, but you cannot say Po for Po Li).

## Surnames

There are relatively few surnames in China ( 200 most common surnames account for $>96 \%$ of all surnames). Most of them consist of one syllable (Wang, Li, Chen, etc.) Only few surnames consist of two syllables (Ou-yang, Mo-qi, Si-ma, Pu-yang). Married women do not get their husband's surname.

## Given names

Mostly two syllables, often connected with a dash (however sometimes separated by a space). Some can be widely used, some can be unique. Often it is impossible to say whether it is a name of a male or a female. The second syllable is usually used in informal addressing. The first syllable can be shared by all siblings. In traditional China a person had several given names during his/her life.

## Most common Chinese surnames (in Pinyin):

Cai, Ceng-Zeng, Chen, Chen-Shen, Deng, Gao, Guo, He, Hu, Huang, Li, Liang, Lin, Lui, Ma, She, Sun, Tang, Wang, Wu, Xie, Xu, Yang, Ye, Zhang, Zhao, Zheng, Zhu

## Links

http://www.wlu.edu/ hhill/names.html-Chinese names explained
http://www.geocities.com/Tokyo/3919/atoz.html - Alphabetical Index of Chinese Surnames (incl. Pinyin, Anglicized and other versions)

### 3.1.3 Korean names

Korean names behave similarly as Chinese names. Surname precedes given name. Given name of most Koreans consists of two parts, in Latin alphabet often connected with a dash. Most common Korean surnames are ( $45 \%$ of the population): Kim, Lee (often spelled as Rhee, Yi or Li), Park.

## Examples:

Yang Sung-jin - S: Yang, Y: Sung, jin
Yang Sungjin - S: Yang, Y: Sungjin
Kim Il-Sung (former dictator of North Korea) - S: Kim, Y: Ir, Sen
Kim Ir-Sen (= Kim Il-Sung) - S: Kim, Y: Il, Sung
He Wung - S: He, Y: Wung

### 3.1.4 Foreignized Czech names

Sometimes you can encounter names that are Czech in their origin, but are somehow altered to fit other languages (diacritics is omitted, female and male surnames are the same - e.g. Judy Sedivy).

Use the following guidelines to decide the lemma and tag for such a name:

- a name that does not distinguish female and male variant, should have just one lemma and three different tags (gender M, $\mathrm{F}, \mathrm{X}^{1}$ )

Peter Janda - Janda_; $\mathrm{S}^{+}$NNMXX-----A---- or NNMS1------A----
Jane Janda - Janda_; ${ }^{\text {+ }}$ + NNFXX-----A----
Jane a Peter Janda - Janda_; $\operatorname{+}$ + Nnxxx-----A----

- a name that has the same spelling as in Czech, should use the Czech lemma Jane Janda - Janda_; + + NNFXX-----A----
- a name with altered spelling has its own lemma (with ,t suffix) Judy Sedivy - Sedivy_;S_,t + NNFXX-----A----

[^2]
### 3.2 Compound names (names consisting of other names)

All lemmas of autosemantic words in compound names must have the category determined by the whole name (e.g. K, R). The lemmas of functional words contain default type category (m).

The problem is that a name of one type can occur as part of a name of a different type:
New England - G
New England Association of Chemistry Teachers - K
New England Association of Chemistry Teachers Journal - R
England is $G$ noun in the first, $K$ adjective in the second and $R$ adj. in the third name.
If the lemma of the category you need does not exist and you have to insert a new one, do not care about numbering of lemmas, somebody else will do it (it would impossible to ensure that the numbers were unique across all annotators). That means, if there is other lemma having just different category (e.g. there is England_;G available, but you need England_;i), just change the category label.

Using the above-proposed separation ${ }^{2}$ of morphology and name categorization, the New England example would be annotated quite easily (only England is marked by a category (G) by the morphological analyzer, the rest is done by some other kind of tool):

```
(new England_;G)
((new England_;G)}\mp@subsup{)}{\textrm{G}}{\textrm{association of chemistry teacher)}\mp@subsup{}{\textrm{K}}{}
(((new England_;G)}\mp@subsup{)}{\textrm{G}}{\textrm{association of chemistry teacher)}\mp@subsup{)}{\textrm{K}}{}\mp@subsup{j}{\mathrm{ journal )}}{\textrm{R}}
```

If the annotator did not recognize the components of the name (e.g. it is in Burmese), (s)he would annotate just the highest level.

The categorization is sometimes quite tricky - you do not know, whether to consider a phrase a name or a name plus normal word:
Nobelova nadace - Nobelův_; $K_{\text {nadace_; }} K^{3}$
Nobeliuv stůl (e.g. in a museum) - Nobelův_;S stůl
Nobelova cena - hard to say (m vs. normal), decided: Nobelův_;S cena.

## Examples:

Brownuiv pohyb - Brownův_;S
Cena J. Debrau - Debrau_;S cena
Mérieuxuiv ústav - Mérieuxův_; $K$ ústav (Should be ústav_; $K$ but is not)
Divadlo J. Grossmana - divadlo_;K J-4_:B_;-K Grossman_;K
přiloha Kolumbus (in Lidové noviny) - Kolumbus_;m
v Dobrovského ulici nejezdí ... - Dobrovský_;G
v Dobrovského nejezdí ... - Dobrovský_;G
poliklinika Dobrovského (unofficial, it is located in D. Street) - Dobrovsky__; $G$

Using the separation of morphology and name categorization, this is quite easy:
Nobelova nadace - (Nobelův_; S nadace $_{\text {K }}$
Nobelův stůl (e.g. in a museum) - Nobelův_; Stůl
Nobelova cena - easy to say: (Nobelův_; $S_{\text {cena }}^{\mathrm{m}}$.

[^3]
## Examples:

Brownuiv pohyb - Brownův_;S pohyb
Cena J. Debrau - (Debrau_-S cena)m
Mérieuxův ústav - (Mérieuxův_;S ústav) ${ }_{\mathrm{K}}$
Divadlo J. Grossmana - (divadlo J-0_:B_; Y Grossman_; $S_{\text {K }}$
přiloha Kolumbus (in Lidové noviny) - (příloha Columbus_; ; ) ${ }_{m}$
Dobrovského ulice - (Dobrovský_;S ulice) ${ }_{\text {G }}$
$v$ Dobrovského - (Dobrovský_;S) ${ }_{\mathrm{G}}$
poliklinika Dobrovského(unofficial, it is located in D. street) - (poliklinika $\left.\left(\text { Dobrovsky }_{-} ; S\right)_{\mathrm{G}}\right)_{\mathrm{K}}$

### 3.3 Horses, DJ's etc.

Horses have all kind of names (e.g. Vinná réva, Deprivace, He Shall Reign, La Paloma Monitor, Frýdlant, Gold End, Lučina, Green Peace, Areál, First, Bounty), and quite often you do not know if it is female or male (sometimes even female like names belong to a male horse). One clue is, that in an Oak (a horse contest type), all horses are young mares - females.

In PDT 1.0 the names of horses where mostly not annotated correctly - simply any available name was selected (Otherwise, a new lemma with category Y would have to be inserted in each case: e.g. Deprivace would be Deprivace_; Y, annotated as deprivace, He Shall Reign annotated as normal English phrase: he_,t, shall_,t reign_, $t$ ).

In our opinion, if the Y category were independent of the lemma, the horse name should be annotated correctly.

Similar problem is with the names of musical groups and DJ's. For famous groups and DJ's enter separate lemmas, for others use normal available lemmas.

### 3.4 Sport clubs, etc.

Name of the town in the club name: if only the town is noted, it is annotated as a geographic name (G), if the whole name of the club is noted, it is annotated as an institution (K). It is analogous to countries. (Česko vs. Německo are annotated as G)

## Examples:

Cheb vs. Plzeň - Cheb_;G Plzeň_; $G$
SKP Union Cheb vs. Plzen̆ - SKP_:B_; $K$ Union_; $K^{4}$ Cheb_; $K$ Plzeň_; $G$

Of course, it can be a problem to know it with foreign clubs. If you do not know, annotate it as an institution (K).

## Examples:

Chelsea - part of London, UK
Chelsea - Chelsea_; $G$
Chelsea FC - Chelsea_;K FC-1_:B_;K_; w_^(...)
Ferencvaros - part of Budapest, Hungary
Ferencvaros - Ferencvaros_; $G$

[^4]Ferencvaros TC - Ferencvaros_;K TC-6_:B_;
Sparta - Sparta-2_;K
Sparta Praha - Sparta-2_;K Praha_;K
Viktorie Žižkov - Viktoria-2_;K_^(jméno_sport.klubu) Žižkov_;K
Udinese - Udinese_;K_,t + NNNXX-----A----

It is the adjective of Udine (town in NE Italy), the official name of the football club is Udinese Calcio (calcio = football). However in Czech, the name is perceived as a noun and as the name of that club, therefore it is probably better to use it in that way:

To determine, whether something is a name of a town or a club, you can try to find that name on a map (eg. http://www.expedia.com/pub/agent.dll?qscr=mmfn) and also find the club (e.g. http://www. soccerage.com).

Using the above-proposed ${ }^{5}$ separation of morphology and name categorization, this looks much more consistent:

```
Cheb vs. Plzeň - \(\left(\text { Cheb__; }^{-G}\right)_{\text {K }}(\text { Plzeň_; } G)_{K}\)
SKP Union Cheb vs. Plzeň - (SKP_:B_;K Union_;K Cheb_;G) \()_{\text {K }}(\text { Plzeň_; } G)_{K}\)
Ferencvaros - (Ferencvaros_;G) \({ }_{\mathrm{K}}\)
Ferencuaros TC - (Ferencvaros_;G TC-6_:B_; \(; K)_{K}\)
Chelsea - (Chelsea_; \(G)_{\text {K }}\)
Chelsea FC - (Chelsea_;G FC-1_:B_; \(\left.K_{-} ; W_{-}{ }_{-}(. .).\right)_{K}\)
Viktorie Žižkov - (Viktoria-2_; \(K_{-}\)^(jméno_sport.klubu) Žižkov_; \(\left.G\right)_{\mathrm{K}}\)
Sparta - Sparta-2_;K
Sparta Praha - (Sparta-2_;K Praha_; \(G)_{\text {к }}\)
Udinese - (Udinese_; \(\left.G_{-}, t\right)_{K}\)
Udinese Calcio - (Udinese_; \(G_{-}, t\) calcio_, \(\left.t\right)_{\mathrm{K}}\)
```

The name of the sport club often contains some abbreviation. Some are common and present in the analyzer's lexicon (e.g. $F C, A C$ ) some are quite unusual (e.g. $E V, E R C, E C$, $E R C, E G, V S, A S)$. If they are not present in the lexicon, entering them, suffixing the lemma by _:B_;K_;w and using NNNXX-----A---8 as tag,

### 3.5 Other

Insisting on inclusion of name categories (K, R, etc.), implies explosion of number of lemmas. We follow each examples section by analogous examples using the above- proposed separation of morphology and name categorization (see 3.2).

### 3.5.1 Geographical names

## Streets

We suppose that the word ulice, etc. is always present, even if elided on the surface.

## Examples:

Dlouhá - dlouhý_;G+ AAFS1----1A----
Dlouhá ulice - dlouhý_;G+ AAFS1----1A----ulice + NNFS1-----A----
Palackého, Dobrovského, etc. - Palacký_; G, Dobrovský_;G+ NNMS2-----A-----

[^5]
## Examples:

Dlouhá - (dlouhý $)_{\mathrm{G}}+$ AAFS1----1A----
Dlouhá ulice - (dlouhý ulice) $)_{\mathrm{G}}$ or (dlouhý $)_{\mathrm{G}}$ ulice + AAFS1----1A---- NNFS1-----A-
---
Palackého, Dobrovského, etc. - $\left(\text { Palacký_; }_{-S}\right)_{\mathrm{G}},\left(\text { Dobrovský_; }^{\prime}\right)_{\mathrm{G}}+$ NNMS2-----A----

## Towns

Words in one-word names consisting that were originally adjectives are annotated as nouns.

## Examples:

Hluboká - Hluboká_;G + NFS1
Dobrá Voda - dobrá_;G + AFS1 Voda_;G^(součást_názvu_Odolena_Voda) + NFS1
Ohrada u Hluboké - Ohrada_;G + NFS1 u_;m + RR2 Hluboká_;G + NFS2

## Examples:

Hluboká - Hluboká_; $G^{6}+$ NFS 1
Dobrá Voda - (dobrá voda) $)_{\mathrm{G}}+$ AFS1 NFS1
Ohrada u Hluboké - (ohrada u Hluboká_;G) ${ }_{\mathrm{G}}+$ NFS1 RR2 NFS2

### 3.5.2 Initials

A separate character for aggregate gender $\{\mathrm{M}, \mathrm{F}\}$ would be good (for initials following a letter in newspaper, an initial before a foreign last name, foreign names, etc.).

### 3.5.3 Institutions, companies

This category contains for example companies, foundations, shops, clubs, sport clubs, restaurants, etc. All autosemantic words in names of restaurants have lemmas with K. The exceptions are functional words that are annotated as default type (m)

## Examples:

Porcela Plus: Plus-3 + TT

## Restaurants

## Examples:

Bar Viola - bar-2_;K, Viola-2_;K
U Medvídků - u-2_;m, medvídek-2_;K
La cambusa - Le-1_;m_,t_^(franc._člen_jako_souč.jmen_a_názvů) ${ }^{7}$, cambusa_;K_,t
Restaurant HaPi - restaurant-2_;-K HaPi_;K

[^6]Čínská restaurace Jin Jiang - čínský-2_;K, restaurace-2_;K, jin-2_;K, jiang-2_;K_t
restaurace Jin Jiang - restaurace-1, jin-2_;K, jiang-2_;K_,t
Francouzská restaurace v Obecním domě - francouzsky-2_;K, restaurace-2_;K, v-2_;m obecní-2_;K dům-2_;K
Hospi̊dka U vylitýho mrože - hospůdka-2_;K u-2_;m vylitý-2_;K mrož-2_;K

## Examples:

Bar Viola - (bar, Viola_; $Y_{\mathrm{K}}$ or (bar, viola) $)_{\mathrm{K}}$ (select anyone, if you do not know the orig.)
U Medvídkù - (u-1, medvídek) ${ }_{\mathrm{K}}$
La cambusa - (le-1_,t_^(franc._člen), cambusa_, t) ${ }_{\mathrm{K}}$
Restaurant HaPi- (restaurant, HaPi_; $\mathrm{K}_{\mathrm{K}}$
Čínská restaurace Jin Jiang - (čínský, restaurace, jin, jiang-, t) ${ }_{\mathrm{K}}$
restaurace Jin Jiang - (restaurace, jin, jiang_,t $)_{K}$
Francouzská restaurace v Obecním domě - (francouzský restaurace, v-1 (obecní dům) $\left.)_{k}\right)_{k}$
Hospuidka U vylitýho mrože - (hospůdka, u-1, vylitý, mroz̆) ${ }_{\mathrm{K}}$

### 3.5.4 Sporting and other events

All events should receive special lemmas with $m$. However, if it is registered as a company and used in that meaning, then it should be $K$. If not certain use $m$.

## Examples: ${ }^{8}$

Paris Indoor - Paris-2_;m_, Indoor_;m_,t + NNNXX-----A-----
US Open - US-3_:B_; $\mathrm{m}_{-}, t+$ AAXXX----1A---8 Open-1_,__;m AAXXX----1A---- ${ }^{9}$
akce Stop milión - stop-1_;m milión'1000000_; $\mathrm{m}_{\mathrm{m}}$

Pohár mistrů - pohár_;m mistr_;m
Mistrovství světa - mistrovství_;m svět_;m

## Examples:

Paris Indoor - (Paris-2_-_G_,t Indoor_,_t_m $)_{\mathrm{m}}$
US Open - (US-2_:B_,_t_ (americký) Open-1_,__;m) ${ }_{\mathrm{m}}$
akce Stop milion - (stop-1 milión'1000000) ${ }_{\mathrm{m}}$
Pohár mistrì - (pohár mistr) ${ }_{\mathrm{m}}$
Mistrovství světa - (mistrovství svět) $)_{\mathrm{m}}$

[^7]
### 3.5.5 Televisions

Generally televisions are annotated as institutions (K). Only, if a company runs several channels, then the channels are annotated as products (R); but it is currently used only with Czech(oslovak) public television (ČT1, ČT2 and F1).

## Examples:

ČT - ČT_:B_; $K$
ČT1 - ČT1_:B_; $R$
Nova - Nova_; $K$
NBC - NBC-4_:B_; $K$
CNN - CNN-1_:B_; $K_{-}$; $y_{-} ; b_{-} t$

### 3.5.6 News, Magazines

All autosemantic word in names of news or magazines have lemmas with R. Currently, some of the newspapers are in the lexicon as institutions (e.g. Sme), this is not correct. Foreign names are often used as in plural, even if in the original there are in singular.

## Examples:

Sme - Sme_;R_^(noviny) + Nnxx
Zeitung - Zeitung-1_;R_,_^^(souč._názvu_něm._novin) + NFPX or NISX

### 3.5.7 Song names, etc.

Names of songs, TV programs etc. are annotated as normal words. The only reason is practical - it would cause explosion of the lexicon. If the categories and morphology are separated (see beginning of 3 ), these items can be annotated as R or m .

## Chapter 4

## Abbreviations

For discussion about inserting abbreviation not present in the morphological lexicon, see 10

### 4.1 Gender

Abbreviations can be used with different genders (e.g ODS - feminine (strana) or neuter). Any abbreviation can have neuter gender. If the gender cannot be disambiguated by the context, use the gender used elsewhere in article. If the author mixes genders or there are no disambiguating contexts, use the gender inherent gender of the abbreviation. In Czech, is usually easy to determine - it is the gender of the head of unabbreviated equivalent (e.g. ODS - strana $\rightarrow \mathrm{f})$. With foreign abbreviations it is much more problematic, different people use different genders (e.g. because of different translation). If you are not certain which of the gender is most widely used, use the default neutrum.

## Examples:

UK - F (univerzita)
FBI (Federal Bureau of Investigation) - I (úřad), N (default or byro), F (probably á la CIA), MP (pl., referring to the members of the FBI)
CIA (Central Intelligence Agency) - F (agentura)

### 4.2 Normal abbreviations

Normal abbreviations have sometimes as a lemma the abbreviation (and sometimes the original unabbreviated word. Usually the former method is used for abbreviation that are more common then the unabbreviated word (and for abbreviation of multi word expressions). But it is not always true.

For discussion about determining the gender of an abbreviation, see 4.1

## Examples:

např.: například_:B + Db-------------8
P.S.:
post-2_:B_,t_^(lat.,_po,_např._P.S.) + RR--X---------8
scriptum_: $B_{-} t_{-}{ }^{\wedge}(p \check{.} .-P . S)+$. NNNXX-----A---8
n.L.: nad-1_: $B^{1}+$ RR--7---------8, Labe_: $B_{-} ; G+$ NNNS $7-----A---8$

[^8]r. 1998: rok_: $B+$ NNIXX-----A---8
$r .:$ režie_: $B+$ NNFXX-----A---8
rež.: režie_:B+ NNFXX-----A---8

### 4.3 Isolated letters

Note: The following is still not official.
Isolated letters (e.g. $A$-konto) are handled as abbreviations. The only exception is if they are not in the name (zápas skupiny B). Many of the annotations suggested bellow are still not offered by the morphological analyzer. Moreover, sometimes the morphological analyzer is constrained to offer appropriate lemma and tag only if the letter is followed by a dot. Should be repaired.

You have to select (or insert) the lemma according to the semantic category:
K-O_: $B_{-} ; Y$ - first (and most middle) names
$K-4$ _: $B_{-} ; K-$ names of institutions
$K-5 \_: B-; G$ - geographical names
$K-6 .: B_{-} ; R-$ names of products
K-7_: B_; $m$ - other names (sporting events, etc)
K-9_:B_; $S$ - last (and some middle) names
k-8_:B_^(ost._zkratka) - other abbreviations (not names)
k-3_(označení_pomocí_písmene) - other letters (not abbreviations, not in names)
Frequent abbreviations have their own lemmas, for example V - V-1'volt_: $B$ or k: $A B C$ k.s. - komanditní::B_^(jen_komanditní_společnost).

Tag selection (or insertion):

- noun: gender is known: $\mathrm{NNg} X X-\mathrm{A}-8(\mathrm{~g} \in\{\mathrm{MFIN}\})$
- noun: gender is unknown: Nnxxx-----A---8
- adjective: AAXXX----1A---8 or AAgXX--1A-8
- others: X@------------1 (variant of X@-------------- for one letter words)

## Examples:

A: A-mužstvo - a-3_^(označení_pomocí_písmene) + AAXXX----1A----
d: odst. 1 písm. d) - d-3_^(označení_pomocí_písmene) + NnNXX-----A----
A: 16 A - A-1'ampér_:B + NNIXX-----A---8
A: A konto (or A-konto) - A-6_: B_; R + AAXXX----1A----
a: ABC a.s. - akciovy_:B_^(jen_akciová_společnost) + AAXXX----1A---8
s: na s. 128 - strana-4_:B_^(v_knize,_rukopise,...) + NNFXX-----A---8

1. It is hard to decide, whether an isolated letter is an abbreviation or a label using a letter (e.g. a-3). For example, $B$ in $B$-konto can be from bežný, but $A$ in $A$-konto probably means better than $B$. Maybe not, maybe yes, who knows. What is important, we mostly annotate texts written by people that do not know. Therefore it would be reasonable to merge these two possibilities together. Maybe annotate all single letters as abbreviation, the possible exception could be labels of paragraphs and cases (odst. 1 písm. d) or za a).
2. Letters in similar configuration as nouns in noun cluster should be treated as nouns - they should be annotated as nouns. See also 6.1.1.
3. The category of a name ( $\mathrm{K}, \mathrm{G}, \mathrm{R}, \mathrm{etc}$ ) and lemma selection should be orthogonal see also 3.2.

## Examples:

```
A: A-mužstvo - a-8_^(ost._zkratka_nebo_označení) + NNNXX------A---8
d: odst. 1 písm. d) - d-3_^(př._odst._a,_za_a) + NNNXX-----A---8
A:16 A - A-1'ampér_:B + NNIXX-----A----8
A: A konto (or A-konto) - (a-8_^(ost._zkratka_nebo_označení)...)}\mp@subsup{)}{\textrm{R}}{}+\mathrm{ NNXXX------A--
-8
a: ABC a.s. - (... akciový_:B_^(jen_akciová_společnost))}\mp@subsup{)}{K}{}+ AAXXX----1A---
s: na s. 128 - strana-4_:B_^(v_knize,_rukopise,...) + NNFXX-----A---8
```

### 4.4 RM-systém, samopal SA-58

An abbreviation preceding a noun is an adjective, an abbreviation following a noun is a noun. We would suggest to annotate them all as nouns (see 6.1.1). Does it mean that HIV in HIV virus and virus HIV have different POS.

## Examples:

RM-systém - RM_:B_; $K$ + AAXXX----1A---8 NNXXX-----A---8
samopal SA-58 - SA-2_:B_; $R$ + NNXXX-----A---8
virus $A H 3 B-A H-1$ : $: B+$ NNXXX-----A---8
virus HIV- HIV_:B_;-L_;U_^(lidský_virus_způsobující_AIDS) + nNXXX-----A---8

### 4.5 Units of measurements

Units called after some males person ( $V$-volt, $A$ - ampér, etc.), have inanimate gender. However, units using degrees ( ${ }^{\circ} \mathrm{C},{ }^{\circ} \mathrm{F}$ ) have masculine animate gender, because the word stupen is always present (even if omitted in the written text). Absolute temperature uses as the unit called Kelvin (K) not degree of Kelvin. Therefore the unit has inanimate masculine gender. However, if the author uses it errorneously as degree, the tag as to be masculine animate.

## Examples:

C: Ráno byly $3^{\circ} \mathrm{C}$. - Celsius_: $B$ - nnmxx-----A--- $8^{\circ}$
C: Ráno byly 3 C. (read as Ráno byly tři stupně Celsia) - Celsius_: $B$ - NnMXX-----A---8
K: Teplota 5000 K. - Celsius_: B - NNMXX-----A---8
K: Teplota $5000{ }^{\circ} \mathrm{K}$.- Celsius_: $B$ - NnMXX-----A--- $8^{\circ}$

If the $C$ character is preceded by some character trying to look as the degree symbol ${ }^{\circ}$ (eg. - $\mathrm{C}, ~ o \mathrm{C}, ~ O C$ ), then you should mark it as an error - as lemma insert the degree ${ }^{2}$ symbol ${ }^{\circ}$ and as tag X@-----------1. It should be converted into a punctuation mark.

[^9]
### 4.6 Authors abbreviations

The author's name abbreviations used in newspapers (e.g. Ber, mas, jst, ... ) have lemma as the form + -99_:B_; $S$ and tag nnXXX-----A---8. There is $X$ for gender because usually we do not know it. If the $\{\mathrm{M}, \mathrm{F}\}$ gender is introduced, it should be used here. These abbreviations are not present in the lexicon, therefore you have to insert them.

## Examples:

ač: PRAHA (ČTK, ač) Problém Gabčîkova ... - ač-99_:B_;-S - NNXXX-----A---8
gap: DUKOVANY (gap) Na základě posudku ... - gap-99_:B_;SNNXXX-----A---8

### 4.7 Academic titles

Titles distinguish genders - there has to be one lemma for men, and one lemma for women (JUDr-1_:B_^(doktor_práv) vs. JUDr-2_:B_^(doktorka_práv)); to keep it consistent the masculine has number 1, the feminine has number 2. We think, the titles should have the same form for women and men. Just the tag should be different, with possibility to have X if the gender is not known (e.g. a letter subscribed as Dr. A. B.)

## Chapter 5

## Colloquial Czech

If an official alternative to the colloquial form exist, then the the colloquial form has the same tag except a different variant ('5', '6', '7', ev. '3' - see 2.2.1.13).

## Examples:

které: stavení, které - P 4NP 4--------- 5
Novákovic: Novákovic pes - Novákův_;S_^(*2) -AUXXXM--------6 ${ }^{1}$
takovejhlema: takovýhle - AAFP 7----1A---6
hovadinama: hovadina - NNFP7-----A---6
naši: pro naší atletiku (officially short: naši) - můj_^(přivlast.) - PSFS4-P1------6

### 5.1 Cos, jaks, kdys ...

We tagged these words as if they were without -s and added -9 at the end.
In our opinion it would be better to divide such an expression in two words (e.g. $\cos \rightarrow$ co + být, analogous to $a b y c h \rightarrow a b y+b y ́ t)$ and tag them like two normal words, just with some variant recognize it.

### 5.2 Suffix -é in plural of neuter

Should not be treated as misspelling, but annotated as (colloquial) variant of official -á forms (variant ' 5 ').

## Examples:

které: stavení, které - P 4NP 4----------5

[^10]
## Chapter 6

## Foreign words and phrases

## General rule

1. For a longer phrase (or citations) in a foreign language, use morphology of that language (but distinguish genders M and I ??) (Hence citation use).
2. For a single word or shorter phrase use Czech morphology. (Hence word use) The borderline is fuzzy, of course.

### 6.1 Part of speech

Many foreign words used in Czech sentence can have different part of speech than in their original language. Usually the hint is how it behaves in different context, if it is declined as a noun, if agrees with its head, etc.

All foreign lemmas have ,,t suffix.
It would be good to somehow distinguish foreign words in word or citation use.

### 6.1.1 English noun clusters

All nouns in attributive use are annotated as adjectives.
That's quite problematic:

1. Virtually all English nouns can be used as attributes of other nouns
2. It is imported to Czech: Staropramen Extraliga, Český Telecom Cup, etc.

We think, it should be annotated as two nouns.

### 6.1.2 Examples

$V$ kostele XY zpívala Musica Bohemica.
Bohemica annotated as a noun; in Latin it is an adjective.
Reason: When the phrase is declined, Bohemica is declined as a noun (žena): pozvali Musicu Bohemicu, *pozvali Musicu Bohemicou
Annotation: Musica_, $t_{-} ; K+N F S 1 A, B_{1}$ (
To je trochu ad hoc.
hoc is annotated as a noun; in Latin it is an adverb.
Annotation: ad_, $t$ RRX, hoc_, $t$ NXXXA
In the following, the section headers refer to the categories of the foreign language.

### 6.2 Articles

English an should be a form of $a$.
Articles merged with a preposition (fra du, ita della, deu im, aufs, zur) are treated as prepositions (?Split into two words?)

Arabic short words (\#\#)(?articles, ?prepositions) are treated as articles.

### 6.2.1 Citation use

Same as single words
Should distinguish gender, number, and/or case Therefore: TTgnc or AAgnc ??

### 6.2.2 Word use

Tag: TT--------------
Lemma: Usually the same as the form
Originally, we wanted to treat articles as adjectives. Forms having different gender, number and/or case, would have the same lemma (der for forms der, die, das, des, dem, den). The problem is that Czech does not respect the original categories (nebezpečný La Manche - la in French F, in Czech the phrase is I; Los Angeles - in Spanish pl, in Czech sg.)

### 6.2.3 Examples

l' l-5_, t_^(př._l'Arc,_stažený_tvar_fr._členu) + TT
$L^{\prime} L-10_{-}^{\wedge}\left(p \check{r} . \_L^{\prime} A q u a, \_\right.$stažený_tvar_fr._členu) + TT (should be m ${ }^{1}$ )
la la-2_,t + TT
il il_,t_(it.__len) + TT
as as_t + TT (Arabic)
al al_t +TT (Arabic)
el el_,t + TT (Arabic)
della della_, $t+\operatorname{RRX}$ (sometimes incorrectly annotated as AAXXX)
am am_t + RRX

### 6.3 Nouns

### 6.3.1 Citation use

### 6.3.1.1 English

To keep it simple, number of English nouns is annotated in the same way in citation use as in word use. That means $X$ is used instead $S$ for nouns in singular. The difference is in $X$ is used instead $S$ for nouns in singular. The difference is in cases - in citation use, the case is always $X$, but word use it can sometimes be declined.

[^11]
### 6.3.2 Word use

### 6.3.2.1 English

The nouns in singular in English have number annotated as X (English singular. is often used in Czech as plural). For nouns that are usually declined mark the case even if in base form, for nouns that are nondeclined mark it as X.

## Examples:

flow: oba dva cash flow (oficiální i skutečný) ... - flow_,t-NNIXX-----A----
statement: v cash flow statementu ... - statement_, t- NNIS 6-----A----
statement: Náš cash flow statement ... - statement_, t-NNIS1-----A----
flow: Náš cash flow ... - flow_,t-NNIXX-----A----
girl: Beatles: Girl - girl_,t-NNFXX-----A----
girls: A ted̆ zahrajeme písničku Girls. - girl_,t- NNFXX-----A----

### 6.4 Verbs

### 6.4.1 Citation use

### 6.4.1.1 English verbs

The following tags are applied:

- Present non3sg: go VB-X---XP-AA---
- Present 3sg: goes VB-S---3P-AA---
- Imperative: go Vi-X---X--A----
- Infinitive: go Vf--------A----
- Past tense: went Vp-x---XR-AA---
- Passive participle gone Vs-X---XX-AP---

If it is hard to determine the base form usage, annotate it as infinitive. If it is hard to decide between past tense and passive participle, use past tense. In PDT 1.0, most of the verbs using base form were annotated using the default - infinitive.

## Examples:

be: to be or not to be - be_,t_^(angl._být,_V_názvech_apod.) - Vf---------------
do: Do it right now! - do-2_,t-Vi-X---X--A----

### 6.4.2 Word use

Usually the tags and lemmas are the same as in citation use.

### 6.5 Slovak language

If a Slovak word has the same form as corresponding Czech one (e.g. prepositions), you should annotate it as if it were Czech. Otherwise it has to be annotated as any other foreign language.

## Chapter 7

## Errors

The text can contain errors. It is reasonable to correct some of them, preserving the original form. However, only low-level errors - spelling and morphology should be corrected (We do not want to correct Engels' text into Heidegger's). Never correct a colloquial form by an official one (e.g. zelené města * $\rightarrow$ zelená města, bez noh* bez nohou), even if the analyzer does not know the form ${ }^{1}$.

The errors have to be just marked, do not edit the file. Try to insert lemma and tag as if the form is correct, and use the DA support for marking errors - it inserts the text "(Chyba)" at the end of lemma or tag. If the lemma is correct, insert it after the tag, otherwise insert it after the lemma, if you do not know just insert it somewhere. If you want to add some comment, write it before the closing parenthesis, preceded by a dash (e.g. (Chyba-nad c by měla být čárka, ne háček)). This convention makes it easy to find the errors automatically.

### 7.1 Characters

Sometimes, foreign characters had been be screwed (e.g. Fran?oise), and therefore the morphological analyzer did not recognize the whole word. Mark it as a lemma error (do not edit the file), it has to be corrected and run thru the analyzer once more. There is a problem with letters not contained in Latin 2, they should be replaced by corresponding characters without diacritics. In the future, Unicode (2 bytes or UTF) should be considered.

### 7.2 Separators, etc.

Sometimes, the text contains $o$ or $I$ as bullets or separators. They should be marked for deletion (Press L (delete) in the lemma or tag list).

[^12]
## Chapter 8

## Hard to decide

## 8.1 až

$a z ̌-1+\mathrm{J}^{\wedge}$
2 až 3 (but not od 2 až do 3 - see až-3)
nabízí přiblížení až přijetí
až-2 + J,
tak .. až: Nabízí se tak okatě, až je to hanba.
.. začnou pochybovat, až nakonec uvěř̌, že ..
Bylo mi 24, a byl jsem plný touhy se pomstit. Až jsem se ocitl před člověkem, který
dostal zabrat víc než já.
$a z ̌-3+D b$
If omitted, the sentence stays grammatical. It is often possible replaceable by teprve.
Dostanete až 250 mil zdarma.
kam až: Kam až půjdeš?
Až on me přesvědčil, že tomu tak bude.
Modifies functional word (should be probably TT)
$a \check{z}+$ conj: Je geolog a až pak filozof
$a z ̌ ~+~ p r e p: ~ z ~ B r n a ~ a z ̌ ~ d o ~ P r a h y ~(C f . ~ a z ̌-1) ~$

## 8.2 jak

jak-1_;L_^(živočich) + NNMnc-----A----
Obvious.
jak-2 + J,

1. Meaning že (cannot be replaced by jakpak)

Jak řekl M. Zeman, bude třeba ..
Jak ukazuje vývoj poslednich let, je to ..
Jak známo, ...
Skutečnost, jak už to býva, byla trochu jiná. However, rarely it can be D.b - depending on the interpretation

Viděl, jak upadla.
Meaning Viděl, že upadla. - J,

Meaning Viděl, jakým způsobem upadla. - Db
Kamera zabírá poslance, jak otvírají krabici
2. Time, meaning $k d y z ̌, a z ̌$, jakmile Přijdu, (hned) jak budu hotovssč. Hned jak budu moct, zavolám.
3. In comparison, meaning než, jako:

Byl věť̌̌̌ jak onssč
rychlý jak vítrsč
4. Condition (coll.), having the meaning jestliže, když Jak budeš zlobit, nepůjdeš nikam ${ }^{\text {ssč }}$

```
Japonskému turistovi upadla lžička, jak chtěl zmáčknout spouš̌̌ fỡáku.
Poslední šancí, jak se probojovat do .., bude ..
Stát to mël spravovat zolăšním ministerstvem (jak je tomu např. v Rakousku)
jak-2 + Ј^
In the phrase jak ... tak ... , having the meaning of i...i . However cf. jak-3 2.
Byli tam jak odborníci, tak amatéři.
jak-3 + Db
Pronominal adverb
```

1. Interrogative - manner or extend (expr. jak pak).
Jak se jmenuješ?
Jak je to možné?
Sometimes expressing large extend (often in exclamations).
Jak ten čas lettisci
Jak (pak) by ne ${ }^{s s \bar{c}}$. Japa by ne.
Líbí se ti to? - A jak!.
2. Relative - marks subordinative adverbial clause (mostly manner expressing compari-
son, often with tak - however cf. jak-2 + J^)
Jak řekli, tak udĕlališ ${ }^{\text {sé }}$
tak dlouho, jak je možné (tak .., jak ..)
Jak si kdo ustele, tak si lehne
3. Relative (coll.) - meaning co, který
ten človêk, jak jsem ti o něm řikalsš̌
4. Indefinite
bud̆ jak buă (the verb is repeated)
jak kdo, jak kde, jak kdy,
??Jak se kưže sama obnovuje, postupně vylučuje ..
?? Jak jsem chodil o berlích, tak jsem si zničil i druhé koleno.

## 8.3 málo

Similar to moc.
málo-1_^(málo_+_2._p.,_málo_peněz) + Ca--c-----------
It has to be modified (in the shallow syntax) by a noun in genitive. Has only two forms: málo and mála (only in genitive).
Máme málo zájemcù.
bez mála penĕz
před málo lety ${ }^{\text {sč }}$
Je jen o málo důsledněǰǐi. - but Je málo důsledný. is málo-3 (Dg)
Udělal to jako jeden z mála odbornîkư, ..
Udělal to jako jeden z mála. - ?? not modified by anything
Udēlal to jako jeden z mála, co přisili.
málo-2_^(př._to_málo_co_měl) + NNNnc-----A----
vystačit s málem ${ }^{\text {ssc }}$
vařit z máláas ${ }^{\text {ssic }}$
Dẽkuji. - Za málo. ${ }^{\text {ssč }}$
málo-3_^(málo_+_příd._jm.,_př._byl_málo_důsledný) + Dg-------dA----
Málo mluví, hodně děláa.š ${ }^{\text {š }}$
Je málo duisledný.
Ve srounání s loňskou sezónou je to velmi málo. - you can say méně.
Zdržím se jen málos ${ }^{\text {sséc }}$.

## 8.4 moc

Similar to málo.
moc-1_^(nad_někým;_politická,_vojenská;_plná,...)
Obvious.
prevzít moc
moc proletariátu
udēlám, co je v mé moci
mermo mocí
moc-2_^(mnoho_něčeho_[se_subst._v_gen.]) + Ca--X-----------
Cannot be replaced by velmi. Can mean prúliš, but is more colloquial. It has to be modified (in the shallow syntax) by a noun in genitive.
Má moc peněz.
Všho moc škodí.
moc-3_^(velmi,_ve_spojení_s_adj.,_př._moc_hezká) + Db
Can be replaced by velmi (except ellipses). Modifies an adjective, adverb or verb.
Je moc hezká.
Vím to moc dobře.
Moc se snažil.
Ve srounání s loňskem je to moc. - ellipse.

## 8.5 proto

proto-1_(proto;_a_proto,_ale_proto,...) + J^
Coordinative conjunction expressing consequence (implication). Structure: reason $\rightarrow$ consequence. Replaceable by tedy. Usually a proto or a ... proto
Nesplnil úkol, (a) proto nedostal odměnu.
Každé proč má své proto.
Německo se začalo dusit, a rozhodlo se proto omezit ...
proto-2_^(dal_mu_co_proto,_tak_proto!) + Db
Pronominal adverb. Refers to the subordinative clause Structure: what $\rightarrow$ reason
proto, že: Udělal to proto, že musel.
Udělal to proto, aby/že mu pomohl.
co proto: dát nëkomu co proto; dostat co proto
no proto: Říkal, že tam přece jen píjde - No proto! (Sometimes classified as a modal particle)

## 8.6 svůj

svůj-1_^(přivlast.) + P8gnc---------v
Obvious.
svůj-2_^(být_svůj) + AOgn-----------v
Problem with tags, analyzer probably needs update.
Vzit za své.
Víme sué. Víme sooje.

## 8.7 tak

In general:

- replaceable by a proto $\Rightarrow \mathrm{J}^{\wedge}$
- replaceable by tím zpisobem, stejně, zroona $\Rightarrow \mathrm{Db}$
tak-2 + J^
Coordinative conjunction. If one of the clause is subordinative then tak has the meaning of an adverb: (Cf. Bál se, tak si pískal. - J^ vs. Kdyby se bál, tak si pískal - Db)

1. A consequence - meaning (a) proto, tedy

Bál se, (a) tak si pískal. ${ }^{\text {ssi }}$
Neudëlali..., př̌ispěvek tak budou muset vrátit.
Byly zakázané, a tak pritahovaly
Zmizí bariéry, a tak bude možné využívat ..
Zpozdila se, a tak musela bĕžet.
Jsou profici, tak ať se podle toho zařídí/
Počitá se s tím, že nêkteré se sloučí, i tak bude třeba ..
2. A conjunction - in $j a k$ - tak
tak-3 + Db

1. Refering to something known, to other sentence, etc.
tak - jak: Bylo to tak, jak jsem myslel. ssí
jak - tak: Jak řekli, tak udělali.
Přesně tak.
tak zoaný
Ǎ̌ je to tak nebo tak ...ss ${ }^{\text {sct }}$
jen tak: Udělal to jen tak.
tak tak: Stihl to (jen) tak tak.
to: Stalo se tak při ..
Tak se tehdy žilo ${ }^{\text {ssc }}$
Sub-Clause, tak Main-clause:
Když - tak: Když jsem počital já, tak mi vyšlo velké číslo.
Pokud - tak: Pokud to není diskriminace, tak nevidím divood ..
Dokud se človèk raduje, tak je život pêkný.
Kdyby - tak: Kdyby/Pokud by se bál, tak by si pískal.
(Cf. Bál se, tak si pískal. - Ј^)
2. Expressing amount (usually large) of a property, etc.

Kam tak rychle? ${ }^{\text {ssc }}$
tak jako: Je tak velký jako já.
Zmizel z povědomí tak jako jeho pomnik;
Nabizí se tak okatě, až je to hanba.
To je ale tak daleko .
tak vysoká; tak oslaben, že ...
Bud̆te tak laskav. sis
ani tak o ..., jako o ...: Nejde ani tak o mzdu, jako o ...
přibližně: Dostane se na burzu asi tak trétí den od ..
hned tak: Hned tak nepřijde. (koneckocui)
odmítá to, stejně tak jako ...
.. a zroona tak hyzdit;
tak jako tak

## Chapter 9

## Sólokapři

## Hradec Králové

Králová_;G_-S_-(Dvůr_Králové) + NNFS2-----A---- It is hradec that belonged to králová

```
strana
na jedné straně ..., na druhé straně ...: druhý-1 (jiný), strana-1_^(v_prostoru) nerespektované ze
strany Israele: strana-3_^(u_soudu, ..
stát
stane se ministrem: stát-2_^(něco_se_přihodilo)
s=to
být sto něco udělat lemma = sto-3_^(být_sto), znacka TT---------------
tudíž
always J^ ##Why is there the other possibility
vážit
vážit cestu - vážit na váze? nebo ctít někoho
vedení
Everything except elektrické vedení type, is considered as form of vedení-1
Examples:
pod vedenim kamarádky - vedení-1_^(*7ést-1)
vedení podniku - vedení-1_^(*7ést-1)
čínské vedení - vedení-1_^(*7ést-1)
elektricke vedení - vedení
```

### 9.1 Date and time

v +
a day - accusative (4): v sobotu, v neděli
a month - locative (6): v lednu, v zárín
an hour - accusative (4): ve 4 hodiny, $v 6$ hodin
ve dne - locative (6) - NNIS 6-----A---9 -special kind of locative that occurs only in this context ( $v$ noci is also in locative):
month in a date - genitive (2): 25. září, 2. října

### 9.2 Numbers, numerals and quantifiers

An adjective modifying a quantified expression agrees in case with the noun not the numeral.

## Examples:

za (gen) těch (gen) mizerných (acc) deset (gen) korun
Deset (nom) nejlepších (gen) sportovců (gen) ukázalo

## 1x

Lemma: as form. Tag Cv--------------

## Example

$1 x-1 x+C v-----------$

## $4 \times 5$

Should be split into three parts. E.g. $4 x 5 \rightarrow 4, x, 5$

### 9.3 Hyphenated composites

If the hyphenated word ends with -o, and by a replacement of that -o by an adjective ending we obtain an adjective (normal or possesive), the lemma for the word is that adjective (e.g. česko-německý - česko $\rightarrow$ český, Karlo-Ferdinanova - Karlo $\rightarrow$ Karlův). Some word cannot be viewed as derived from adjectives, but rather from nouns (e.g. rap- jazzová - rap $\rightarrow$ rap vs. rapovo-jazzová - rapovo $\rightarrow$ rapový). However, the lemma of that noun cannot be used as a lemma for the hyphenated form, and a new lemma (having different number) has to be introduced.

That is extremely inconvenient (padlý na hlavu) - virtually any noun can be used in such a context, therefore for every noun, there have to be two lemmas - one for normal usage and one for hyphenated usage. We strongly suggest to allow any noun to have a hyphenated form in several variants - at least the bare base form and form ending in -o (variant '1').

## Examples:

srbsko-černohorská - srbský- A2--------A----
Univerzita Karlo-Ferdinandova - Karlův_;K_^(*3el) -A2--------A---- ${ }^{1}$

[^13]Univerzita Karel-Ferdinandova - Karel-2_; $K$ - A2--------A----
rap-jazzová: rap-2-A2--------A----
\| Better: rap-A2--------A----
rapo-jazzová: rap-2 - A2--------A----
\| Better: rap-A2--------A---1
rapovo-jazzová: rapový-A2--------A-----

## Chapter 10

## Insertion

If the possibilities offered by morphological analyzer are not suitable, you have to insert new lemma and/or tag. If you insert a new lemma, you have to ensure, that the lemma (lemma proper) you insert is not already used. That usually means adding unique numbers to distinguish lexical items having the same base form.

### 10.1 Possessive adjectives

Lemmas of possessive adjectives show how the get the noun they are derived from (see also 2.1.1). For example:
kardinálův_( $\left.{ }^{*} 2\right)$ - remove two letters: kardinál
Karlů $V_{-} ; Y_{-} \wedge^{(* 3 e l)}$ - remove 3 characters, add "el": Karel
Martinův-1_; $\left.Y_{-} \wedge^{*} 4-1\right)$ - remove 4 characters, add "-1": Martin-1

## Examples:

premiérův_( ${ }^{*}{ }^{2}$ )
Sorosův_;S_^(*2)
chlapcův_^(*3ec)
Švehlův_; $\left.S_{-} \wedge^{( }{ }^{*} 2 a\right)$
Máchův_;S_^(*2a)
Hlinkův-1_;S_^(*4a-1)
Benderův-1_;S_^(*4-1)

### 10.2 Words ending with -ismus, -izmus

The base form should use -izmus ending, the form using -ismus is treated as variant ' 1 '. Currently still some entries do not follow this convention.

## Examples: ${ }^{1}$

mechanizmus: mechanizmus - NNIS1-----A----
mechanismus: mechanizmus - NNIS1-----A---1
exhibicionismus: exhibicionismus - NNIS1-----A----

[^14]exhibicionismus: exhibicionismus - NNIS1-----A---1
nacionalizmus: nacionalizmu - NNIS1-----A----
nacionalismus: nacionalizmus - NNIS1-----A---1

### 10.3 Strange and unique things

## Transcription of pronunciation

Lemma: as the form, tag: NNXXX

## Examples:

vyslovujeme "zpjev" - zpjev + NNXXX

## Isolated morphemes

Lemma: as the form, tag: NNXXX

## Examples:

...ve slovech končících na -ství píšeme...: ství + NNXXX

## Geometry

We can meet an article about a geometric theme sometimes. It means, that there occur a lot of triangles ABC , abscissas (lines) $\mathrm{PQ}, \mathrm{RS}, \mathrm{AB}$ and so on in that article. It is necessary to create a new lemma ending 98 for every mentioned figure.

## Chess codes

Lemma: The code + -1_;w. Tag NNNXX-----A---8 (neuter because pole is neuter)

## Example

Jh8 - Jh8-1_; $w+$ NNNXX-----A--- 8

## Crippled forms

Lemma: the same as the form ${ }_{+}, t$
Tag: normal if possible, otherwise NNXXX / AAXXX according to the POS

## Examples:

Waklaf Hafel - Waklaf_, $t$ + NNMS1, Hafel_, $t$ + NNMS 1
Gaptschikowo - Gaptschikowo_,t + NNNS1
v Gaptschikowo - Gaptschikowo_,t + NNNXX

### 10.4 Other

This section contains especially examples of previously inserted lemmas/tag. Some of them are already in the dictionary, however they mainly serve as an inspiration, when inserting similar things.
ad hoc
ad- $x_{-}, t+\operatorname{RRX}$, hoc- $x_{-}, t+\mathrm{N}$
pele-mele
For example as a heading in a newspaper pele +TT , mele +TT

## zprostředkovací vs. zprostředkovat

The morphology is rather shallow. It means, for example, that lemma for zprostředkovací is zprostreedkovací (precisely zprostředkovací_ ${ }^{\wedge}\left({ }^{*} 2 t\right)$ ), and zprostředkovat as it was in the past.

## Chapter 11

## Errors in PDT 1.0

- HaDivadlo_; $Y \rightarrow$ HaDivadlo_;K
- Theaters - most of the theaters do not have K category (search for Divadlo case sensitive): Divadlo v Celetné, Divadlo Husa, etc.
- S/NWS/1993/mf930701:105-p4s1 - los should be los-2
- které should be P 4NP 4---------5 not corrected as an error. (look for $w<$ spell $>$ které)
- <s id="S/NWS/1992/lnd92251:095-p1s1">: US should be with m (US-3_:B_;m_,t) not K.
- Novákovic, Perotovic, .. should be AUMS1M---------6, but it is either AUgncM-6 or NNXXX-----A---6 (e.g. S/NWS/1992/lnd92254:051-p5s8)
- S/NWS/1992/lnd92258:077-p91s1

|  | cash | flow | statement |
| :---: | :---: | :---: | :---: |
| Is | cash_, $t$ | flow | statement |
|  | AAXXX----1A--- | NNFXX-----A--- | NNIS1-----A---- |
| Should be | cash-2_,t | flow-2_,t | statement_,t |
|  | A2--------A-- | AAXXX----1A--- |  |
| Should be | cash_, $t$ | flow_,t |  |
|  | NNIXX-----A---- | NNIXX-----A---- |  |

[^0]:    ${ }^{1}$ See also: http://ufal.mff.cuni.cz/pdt/Morphology_and_Tagging/Doc/docc0pos.pdf, for quick reference: http://ufal.mff.cuni.cz/pdt/Morphology_and_Tagging/Doc/hmptagqr.html.

[^1]:    ${ }^{2}$ http://ufal.mff.cuni.cz/pdt/Morphology_and_Tagging/Doc/compact_tags.pdf

[^2]:    ${ }^{1}$ If $\{\mathrm{M}, \mathrm{F}\}$ gender is introduced, the tag $\mathrm{NN}\{\mathrm{M}, \mathrm{F}\} \mathrm{XX}----\mathrm{A}----$ should be used.

[^3]:    ${ }^{2}$ See the beginning of 3 .
    ${ }^{3}$ The lemmas have different numbers (e.g. Nobelův-1_;S, Nobelův-2_;K).

[^4]:    ${ }^{4}$ In PDT 1.0, the lemma is Union, but it should Union_;K

[^5]:    ${ }^{5}$ See the beginning of the 3 .

[^6]:    ${ }^{6}$ Frequent names of towns and names when POS changes, have separate entries. Therefore not (hluboká) ${ }_{G}$
    ${ }^{7}$ In the current morphological lexicon, the $m$ is missing.

[^7]:    ${ }^{8}$ Many of these entries are not in the lexicon, therefore the actual numbers can be different once it is there. See note in 2.1, e.g. mistrovství: mistrovství-1, mistrovství-2_;m, mistrovství-3_;R, etc.
    ${ }^{9}$ We think, it is perceived as noun, probably inanimate, in Czech.

[^8]:    ${ }^{1}$ Should be nad-2_:B_; m , but is not.

[^9]:    ${ }^{2}$ On Czech keyboards usually Shift+<key-on-the-left-from-1>, followed by Space. Or on any keyboard Alt+0176.

[^10]:    

[^11]:    ${ }^{1}$ If the name categories and lemmas were independent, everything annotated as L-10 would become l-5 (see 3.2)

[^12]:    ${ }^{1}$ You have to insert a new lemma and/or tag - see 10 for more details.

[^13]:    ${ }^{1}$ Better: KarlůV_; $Y_{-} \wedge^{*}\left({ }^{*} 3 e l\right)$ - A2---------A-----. See 3.2

[^14]:    ${ }^{1}$ The examples show the desired state, in the current version of morphological analyzer they are regarded as separate lexical items (they have different lemmas)
