
TectoMT: Machine Translation System

Martin Popel

ÚFAL (Institute of Formal and Applied Linguistics)
Charles University in Prague

FEAST (Forum Entwicklung und Anwendung von Sprach-Technologien)
November 16, 2010, Saarbrücken, Germany

Outline

- Treex (framework) vs. TectoMT (MT system)
- Demo translation step by step
- Annotation of translation errors
- Improvements
 - Hidden Markov Tree Models (HMTM)
 - Combining dictionaries
 - Maximum Entropy dictionary
- Results
- Examples of translation

Treeex vs. TectoMT

HMTM in MT

Source sentence:

Strojový překlad by měl být snadný.

Target sentence:

Machine translation should be easy.

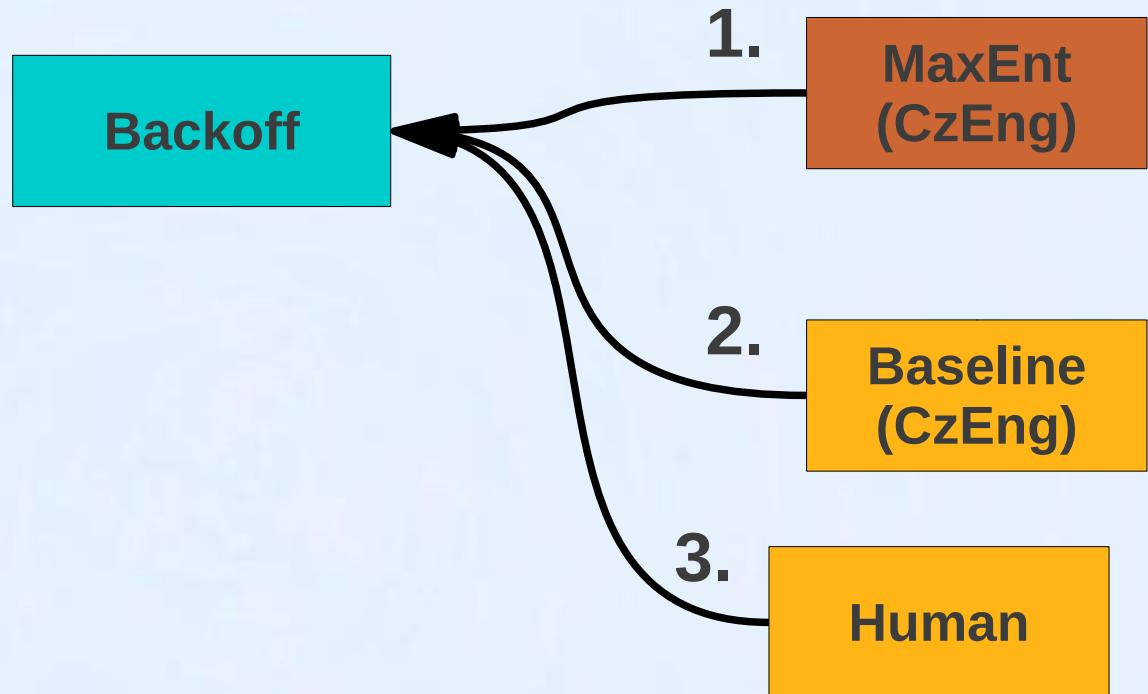

$P_E(\text{source} \mid \text{target})$... emission probabilities ... **translation model**

$P_T(\text{dependent} \mid \text{governing})$... transition probabilities ... **target-language tree model**

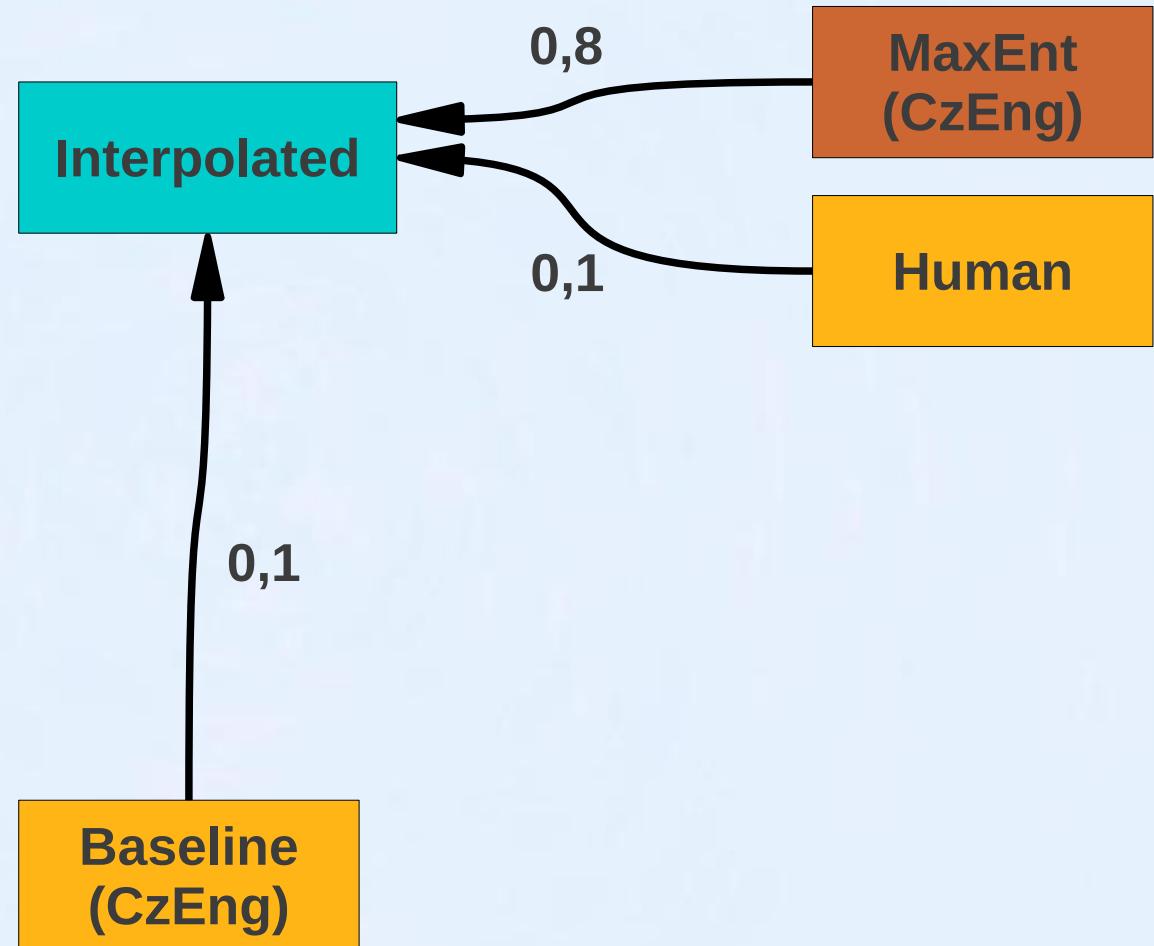

Combining Dictionaries

- new general interface (for lemmas and formems)
`$dict->get_translations($input_label, $features)`
returns a list of translation variants including probabilities
- OOP style, dictionary constructor can take another dictionary (or more) as a parameter → hierarchy
- Four basic types of dictionaries:
 - Static plain** loaded from a file „lemma → lemma“
 - Context** loaded from a file „lemma,features → lemma“
 - Derivational** translations derived dynamically, input dictionary
 - Combinational** combination of more input dictionaries

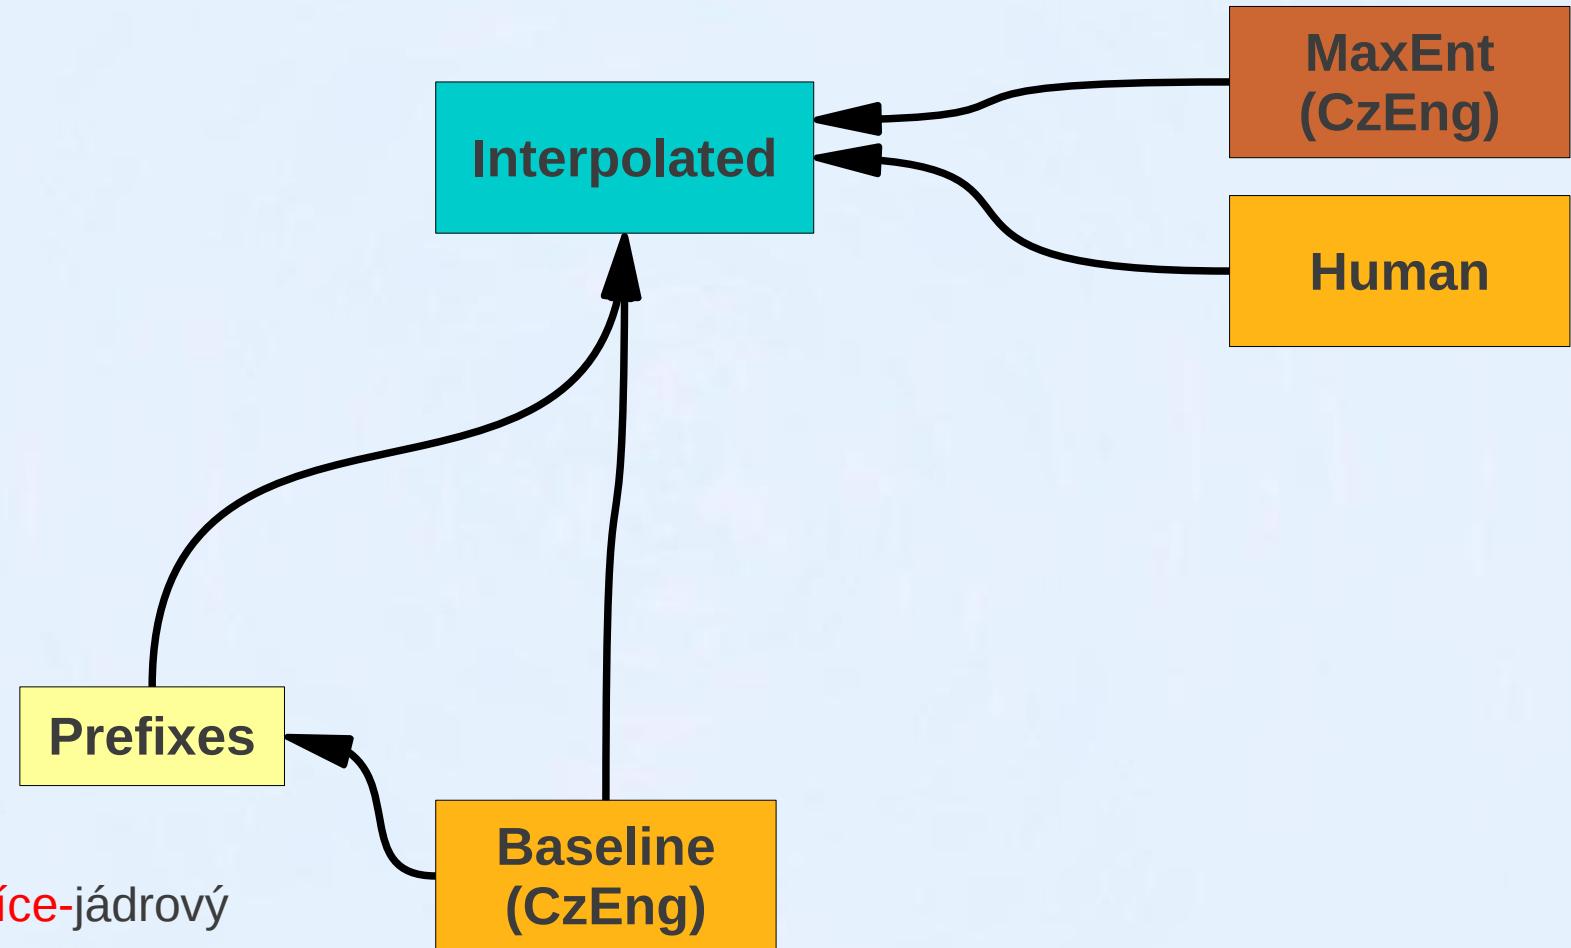

Hierarchy of lemma dictionaries

multi-core → více-jádrový
více-jádro
multi-jádrový
multi-jádro

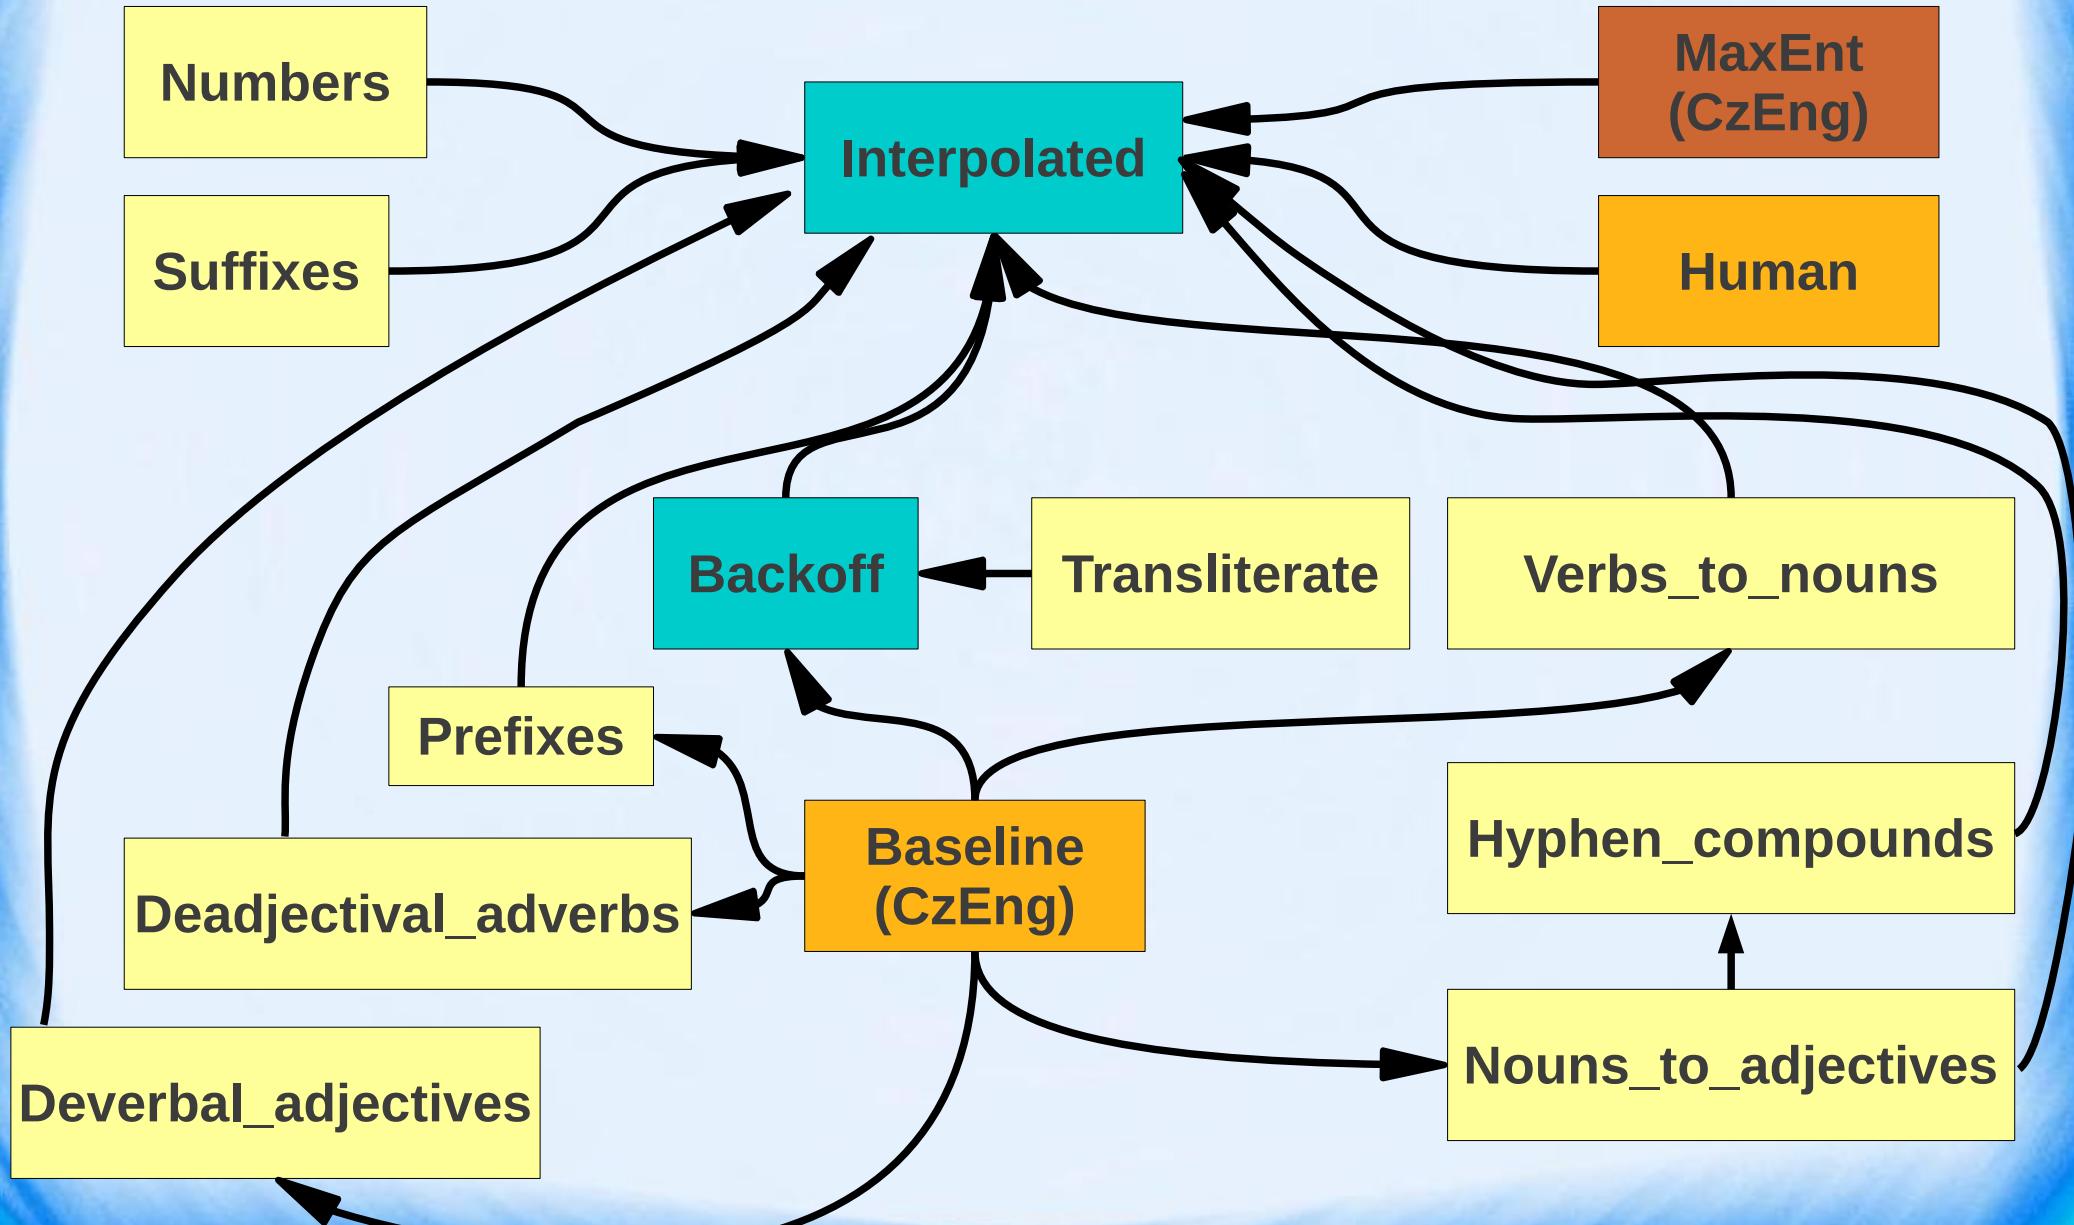

Hierarchy of lemma dictionaries

Hierarchy of lemma dictionaries

Hierarchy of lemma dictionaries

Maximum Entropy Dictionary

Baseline Dictionary

$$p(y|x) = \frac{\text{count}(x, y)}{\text{count}(x)}$$

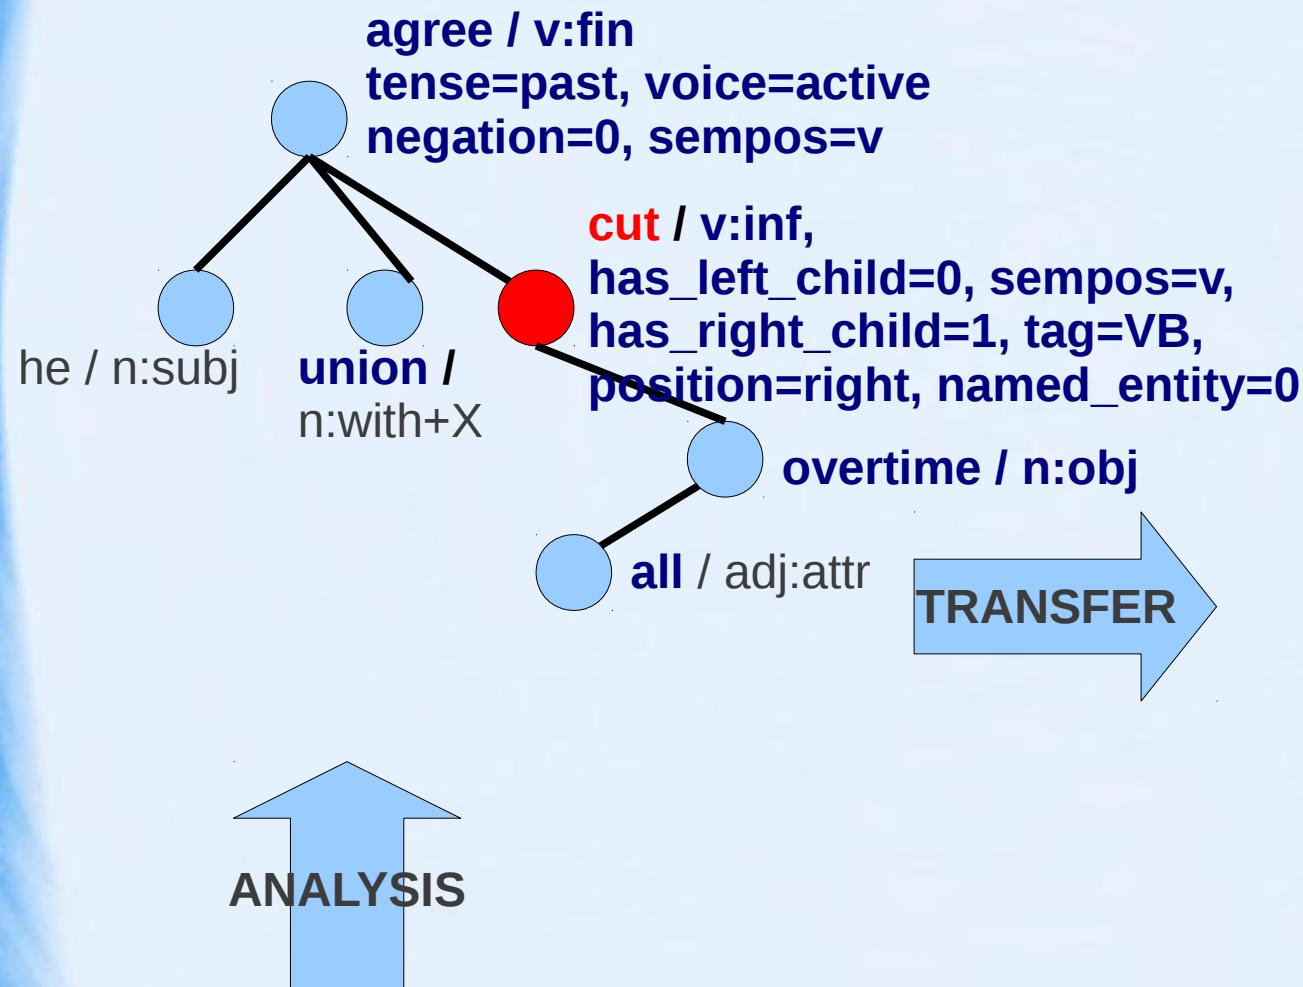

- Maximum likelihood estimates (from the training sections of CzEng 0.9)
- Pruned by thresholds on $p(x|y)$ and $p(y|x)$
- No context used
 x = source lemma
 y = target lemma

MaxEnt Dictionary

$$p(y|x) = \frac{1}{Z(x)} \exp \sum_i \lambda_i f_i(x, y)$$

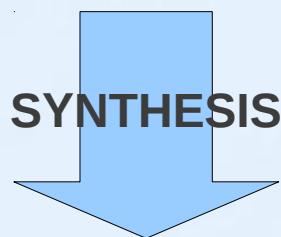

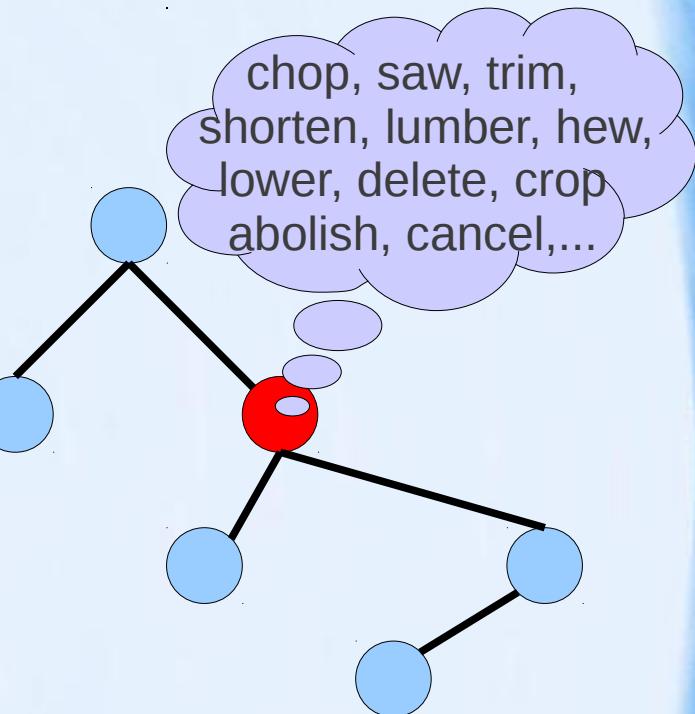

- One MaxEnt model for each source lemma (same training data as for the Baseline Dict.)
- Interpolated with Baseline Dict. (due to pruning)
- Context features used (x = source context)
 - local tree context
 - local linear context
 - morphological & syntactic categories
 - ...

Maximum Entropy Dictionary

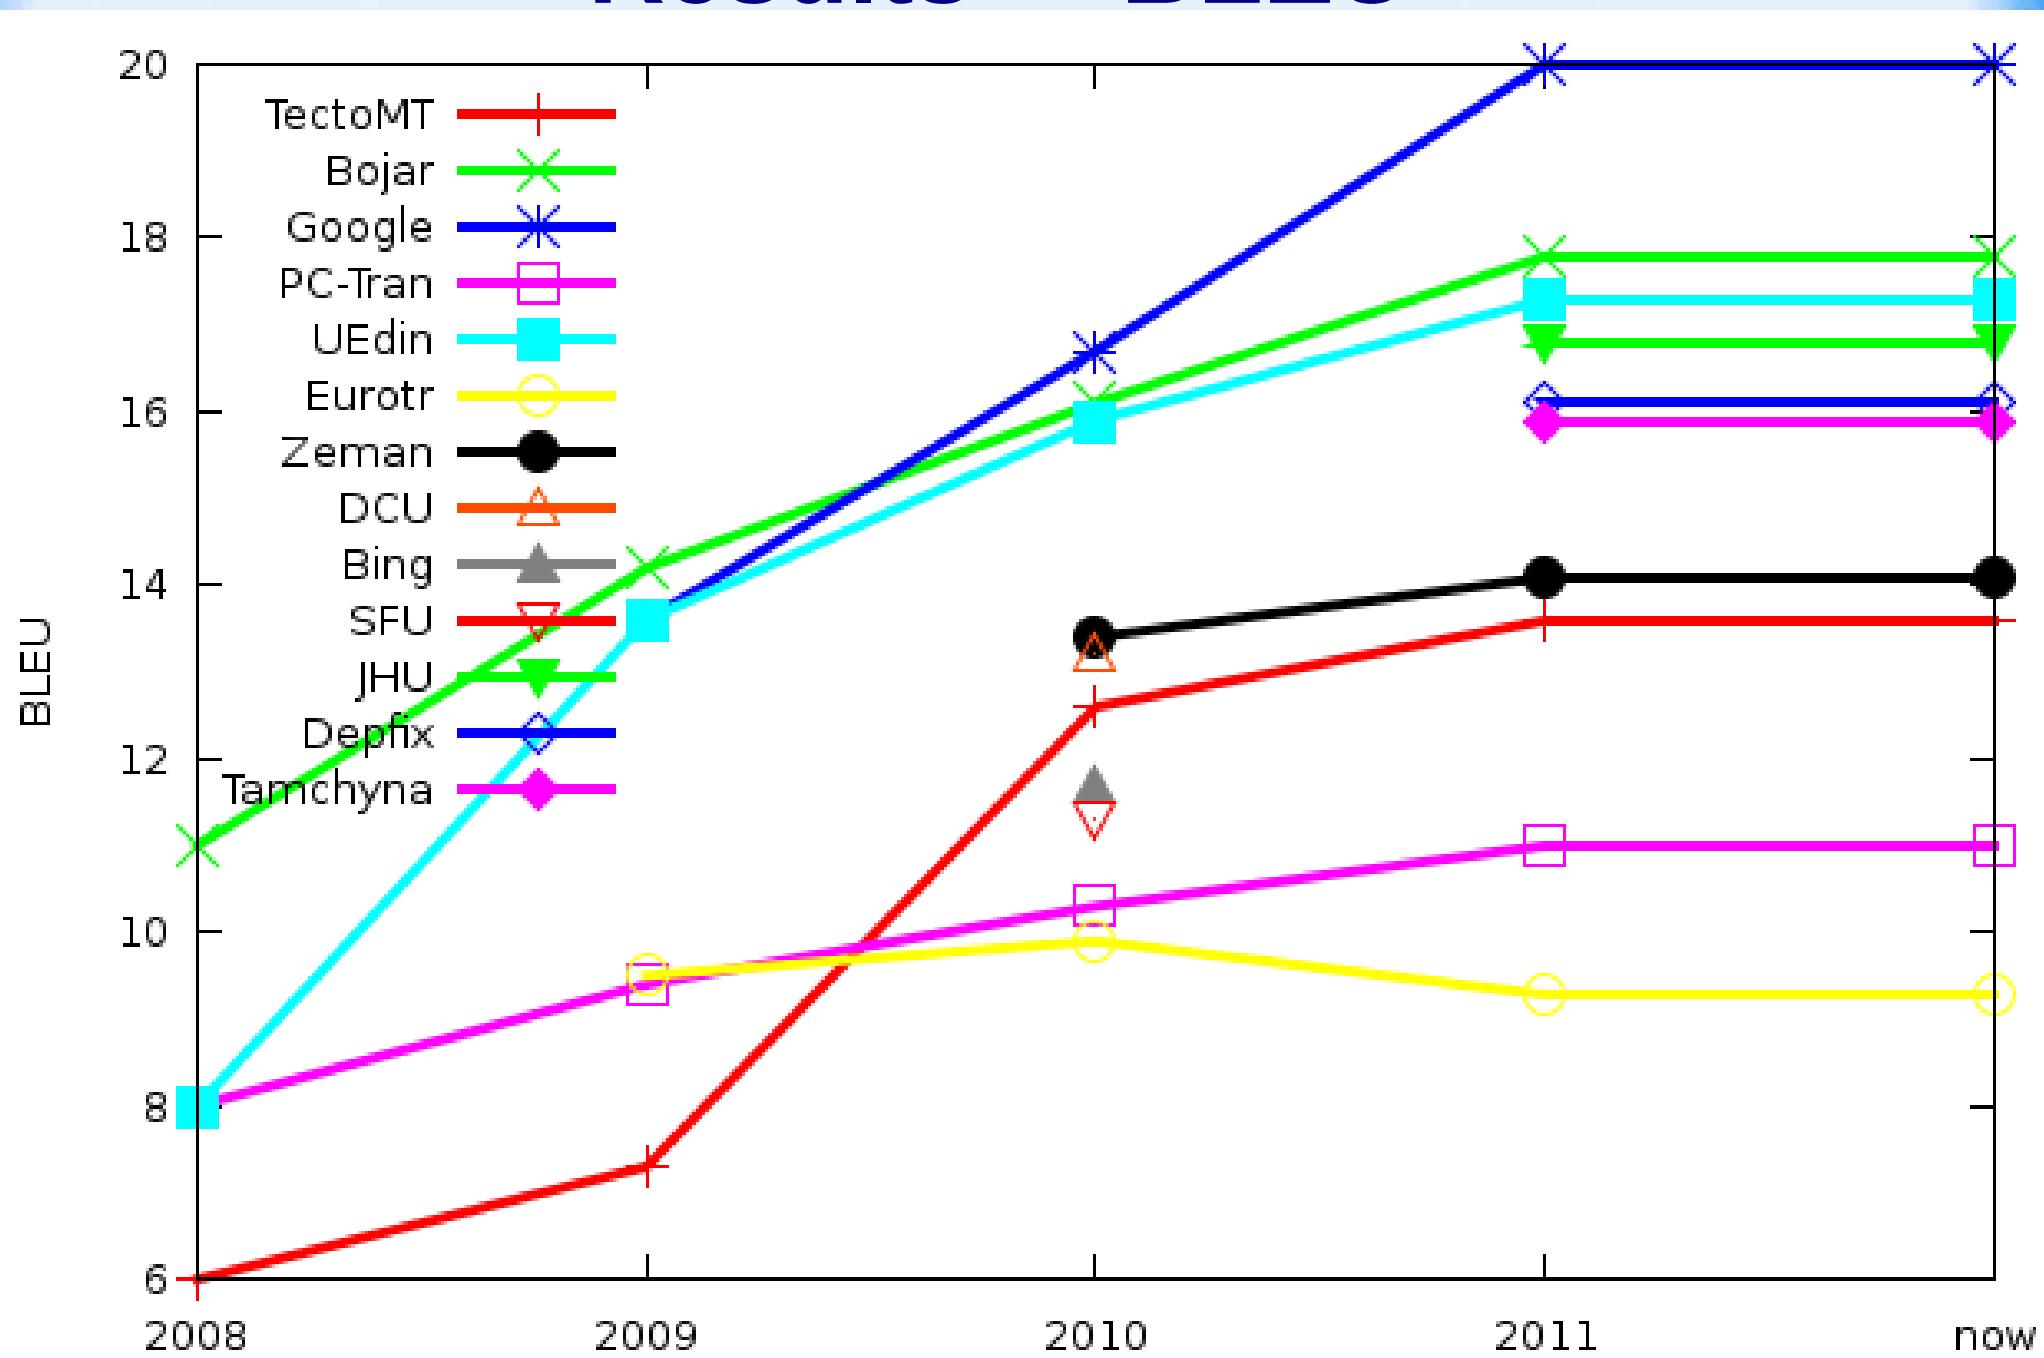

He agreed with the unions to cut all overtime.

Dohodl se s odbory na zrušení všech přesčasů.

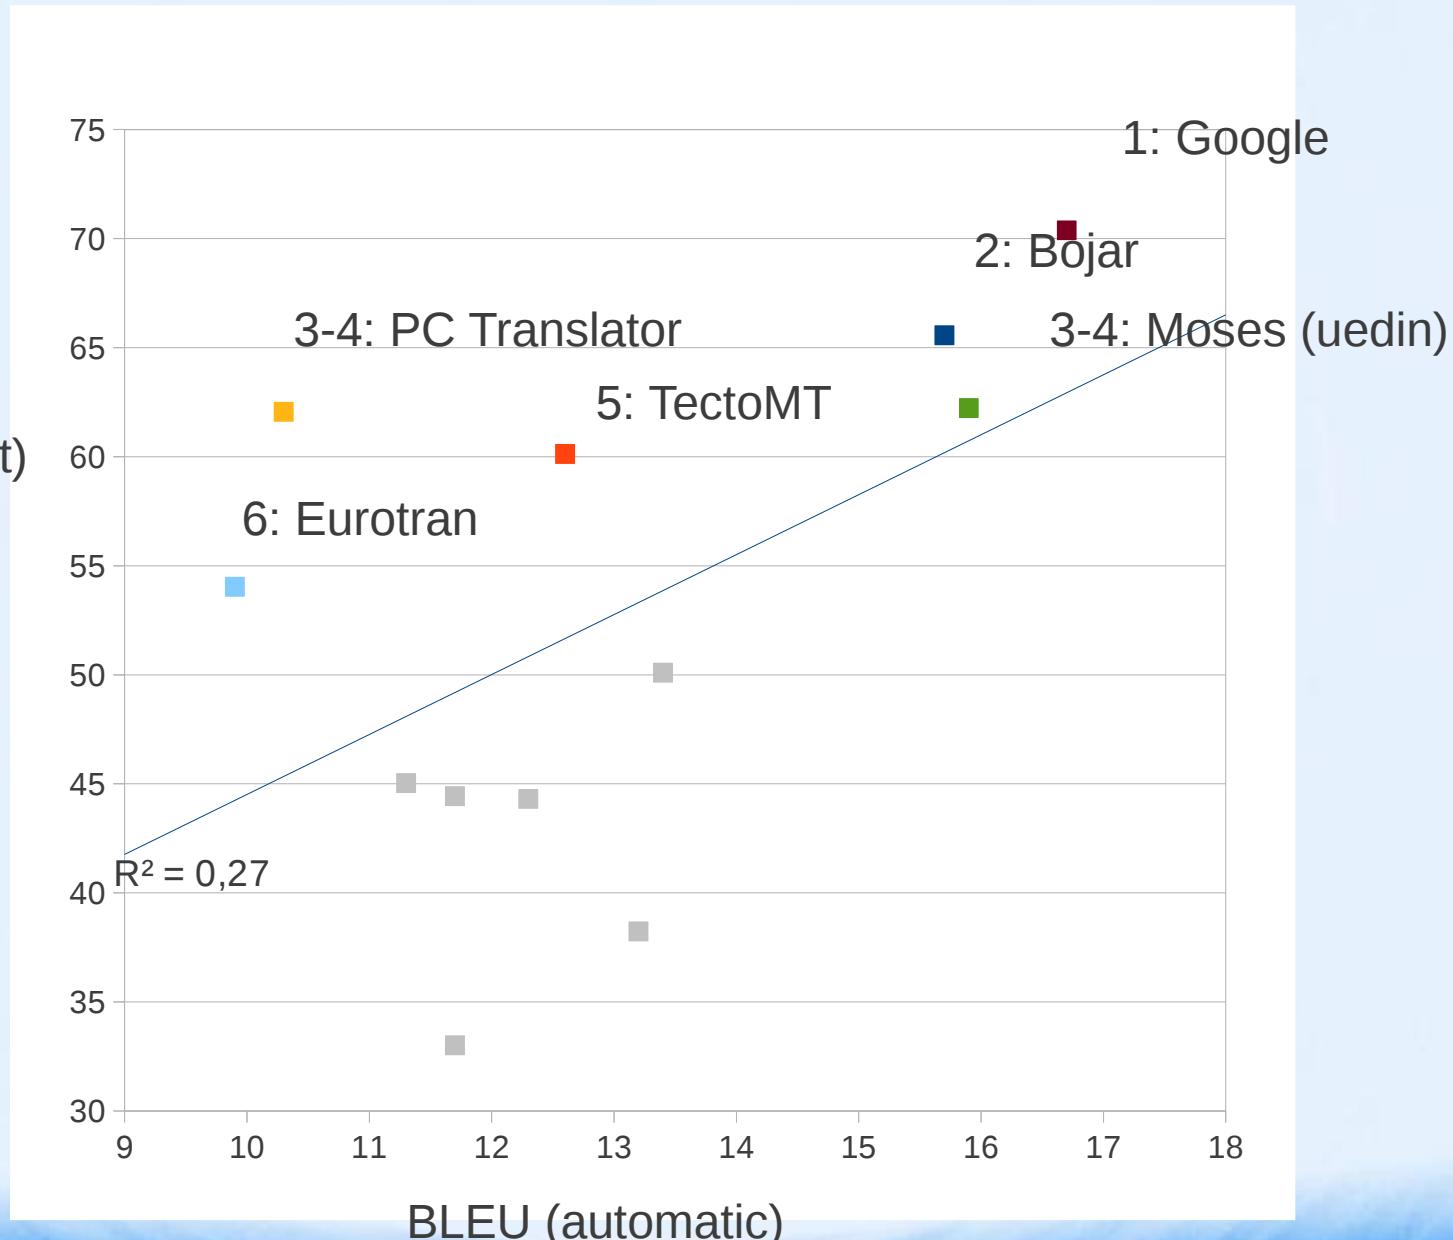

Results – BLEU

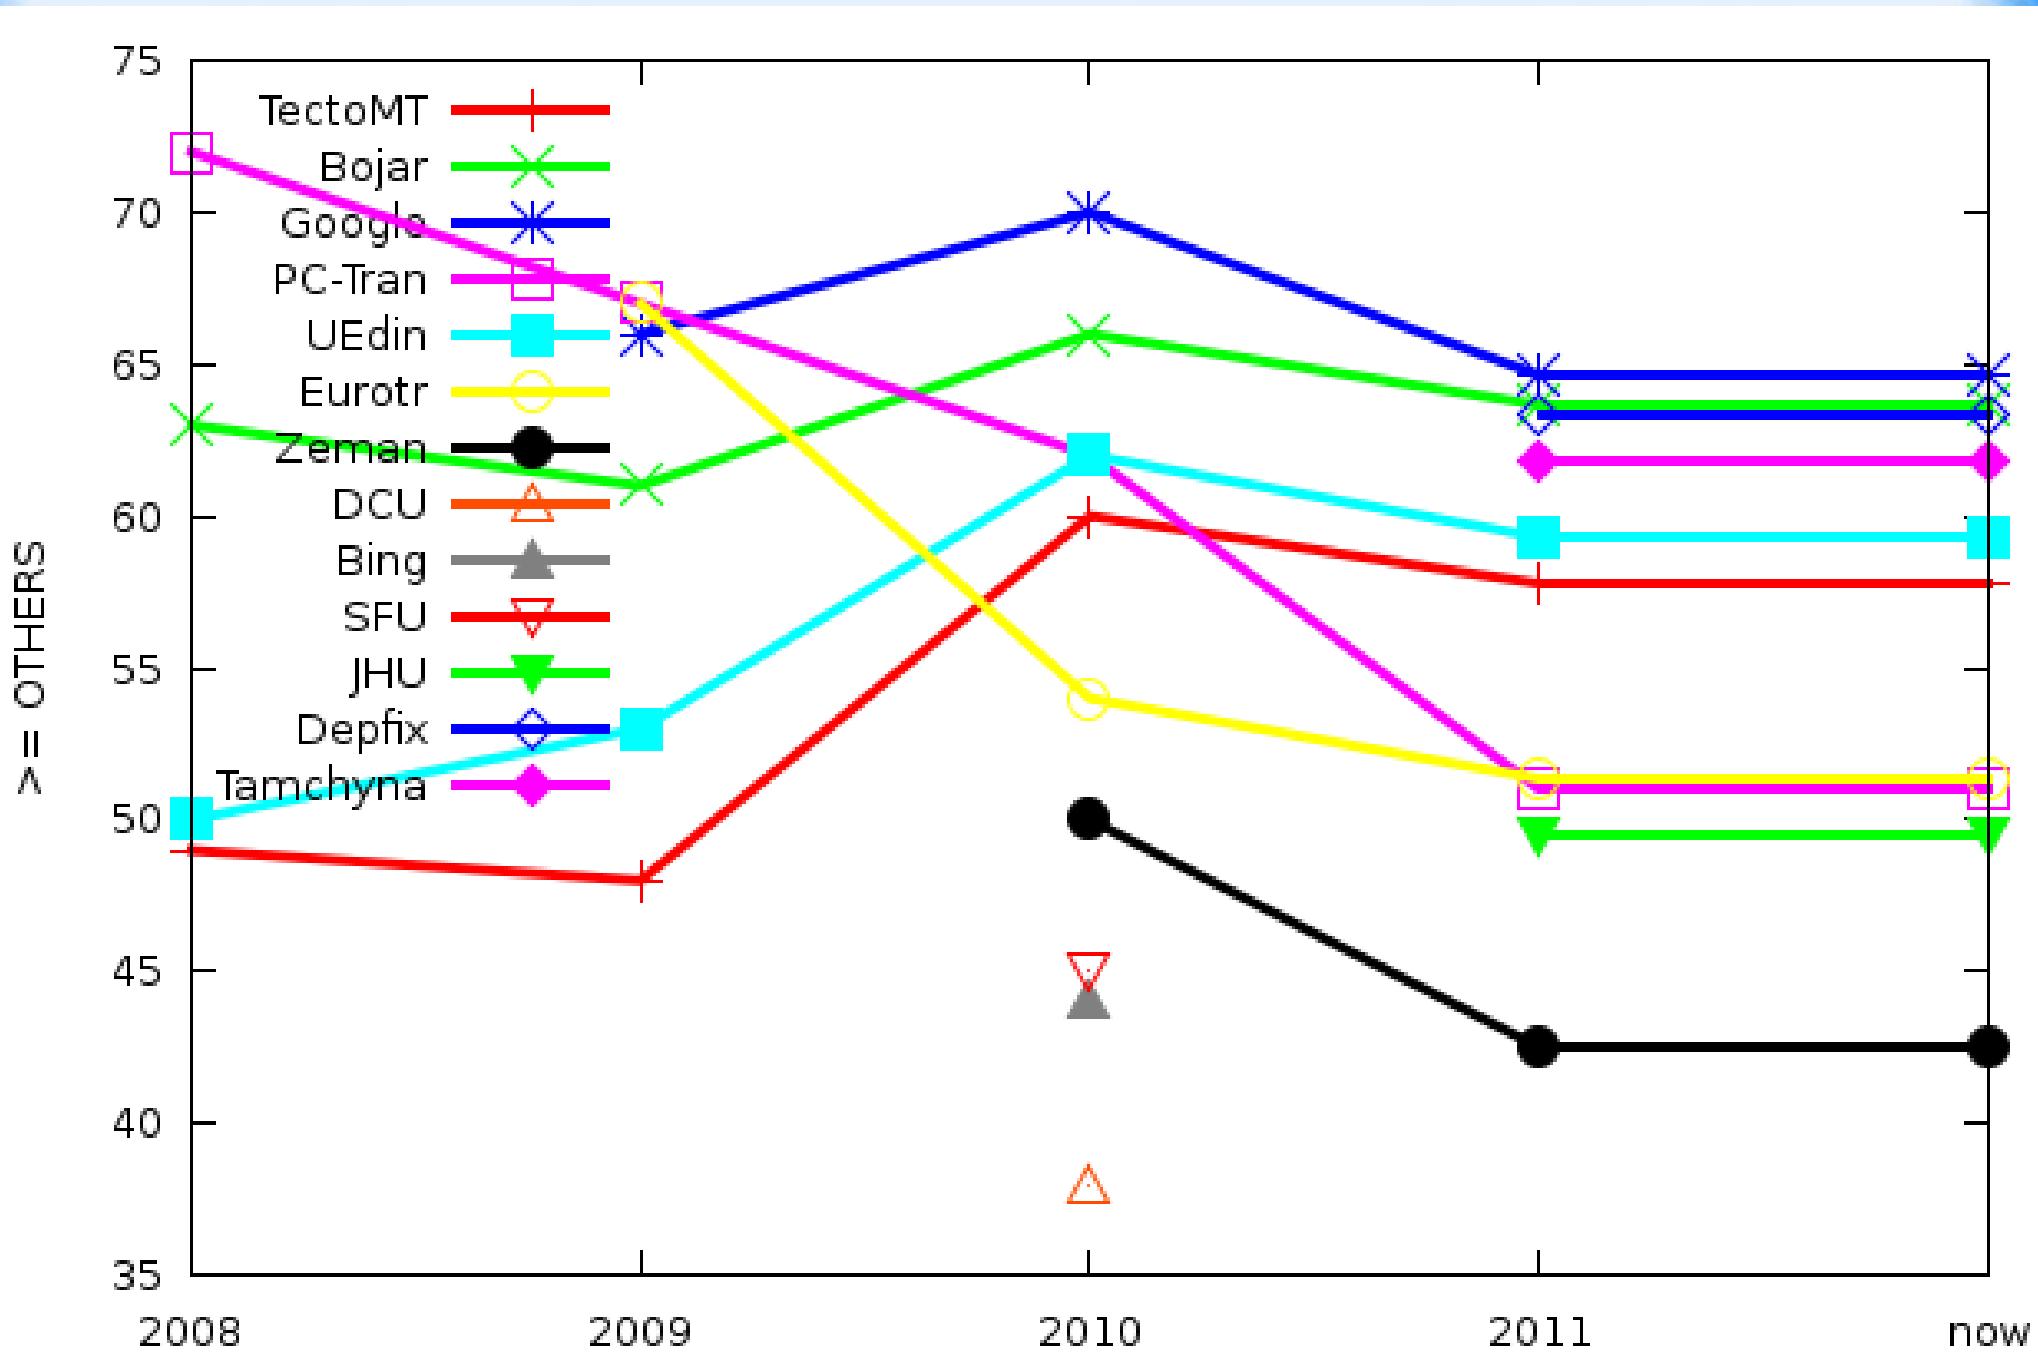

Results – BLEU vs. Ranks (WMT 2010)

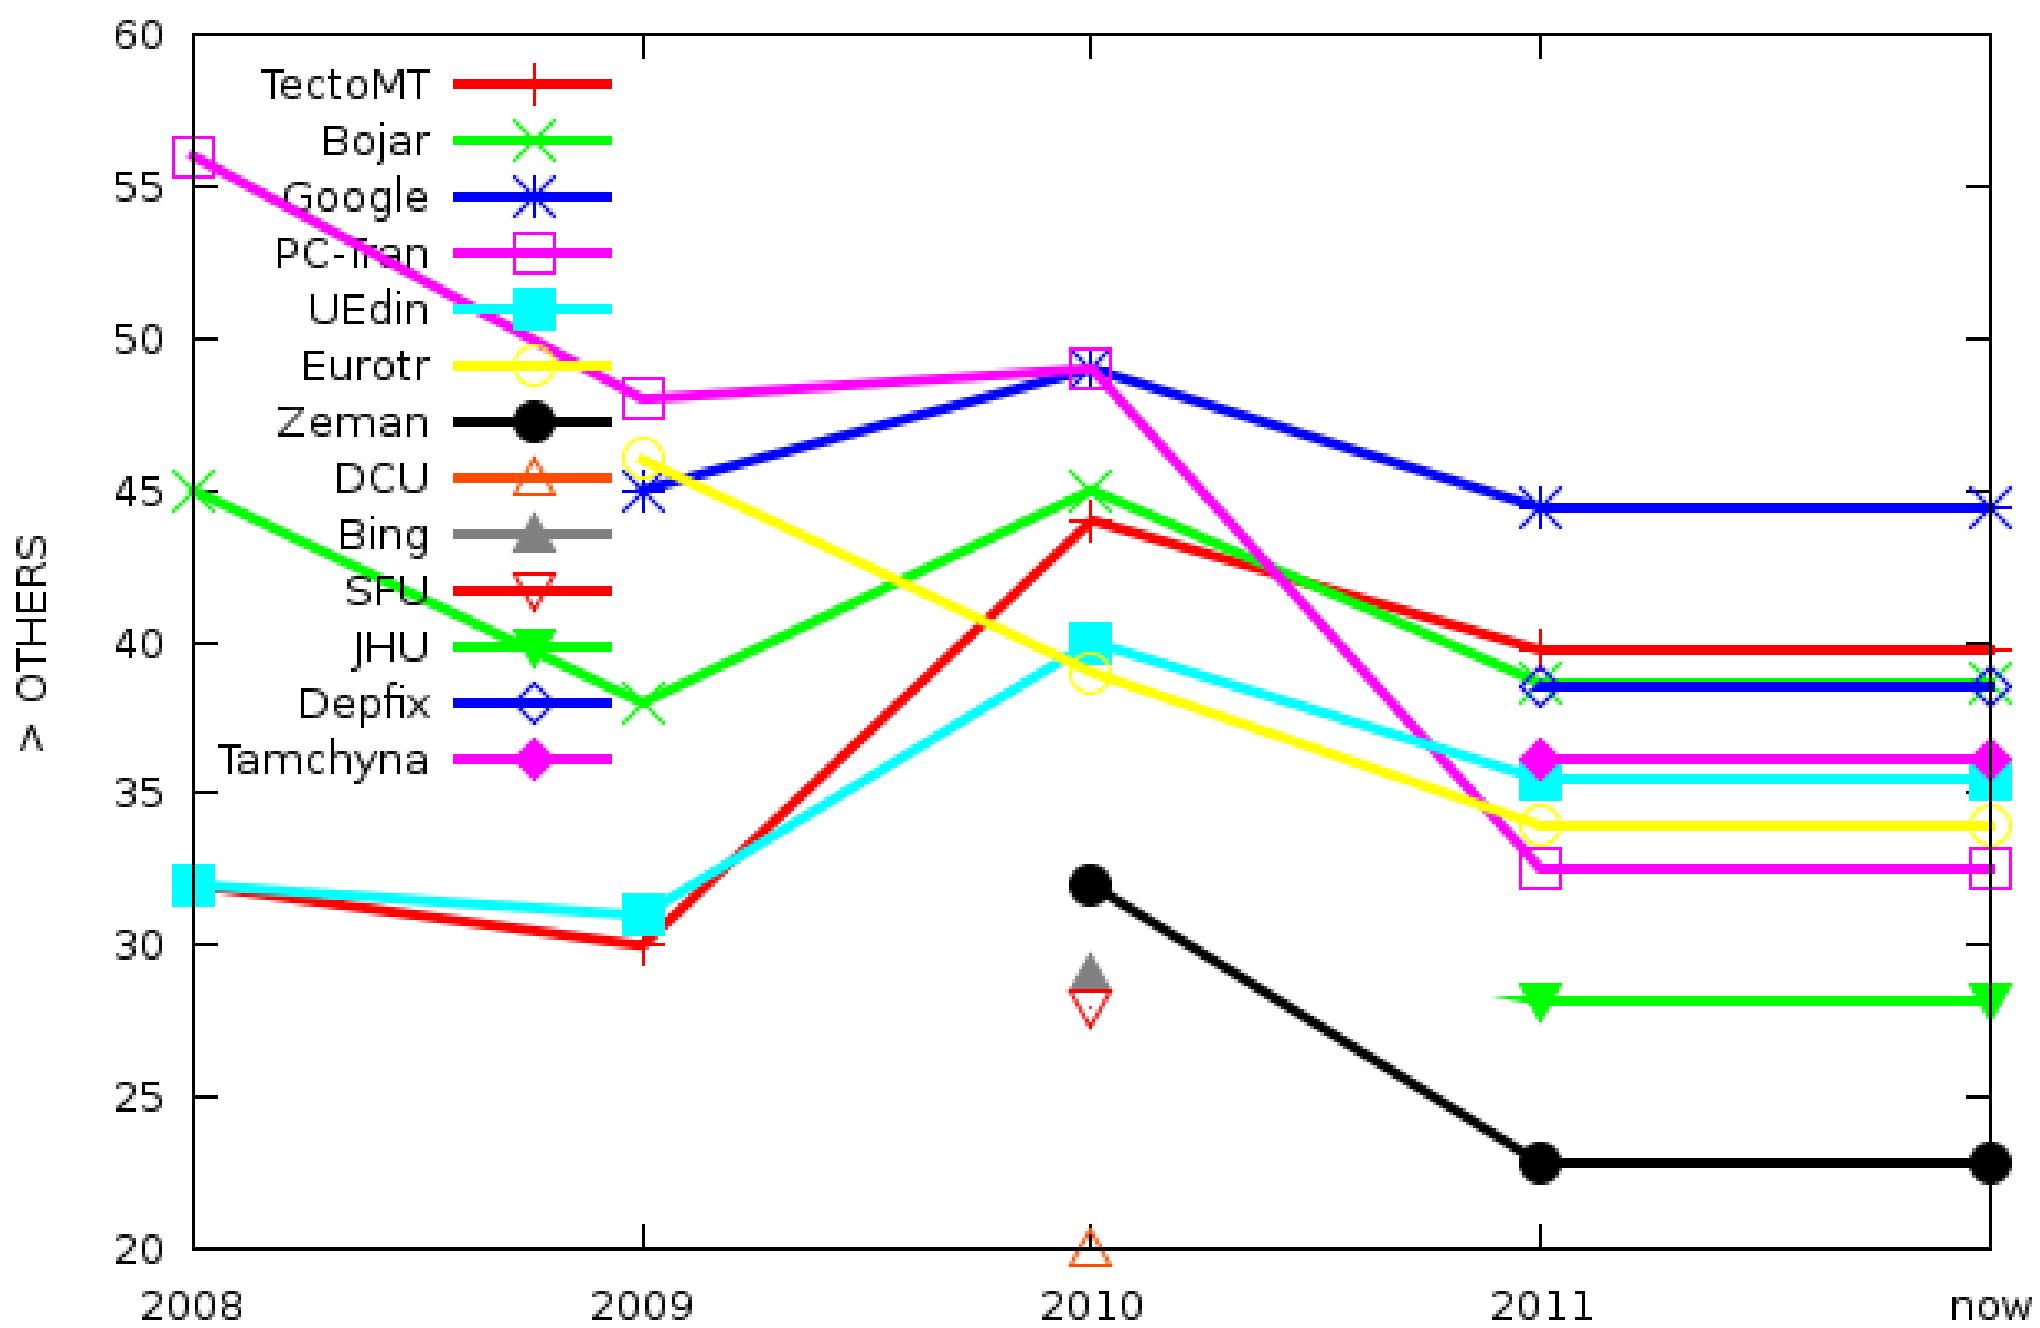

Rank
(human judgement)

Results – manual ranking (\geq others)

Results – manual ranking (> others)

Examples of Translation (2009)

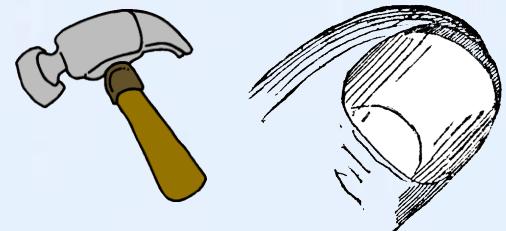

A miss by an inch
is a miss by a mile.

Slečna palec je slečna miliónu.

I'd rather be a hammer
than a nail.

Spíše bych byl kladivo než nehét.

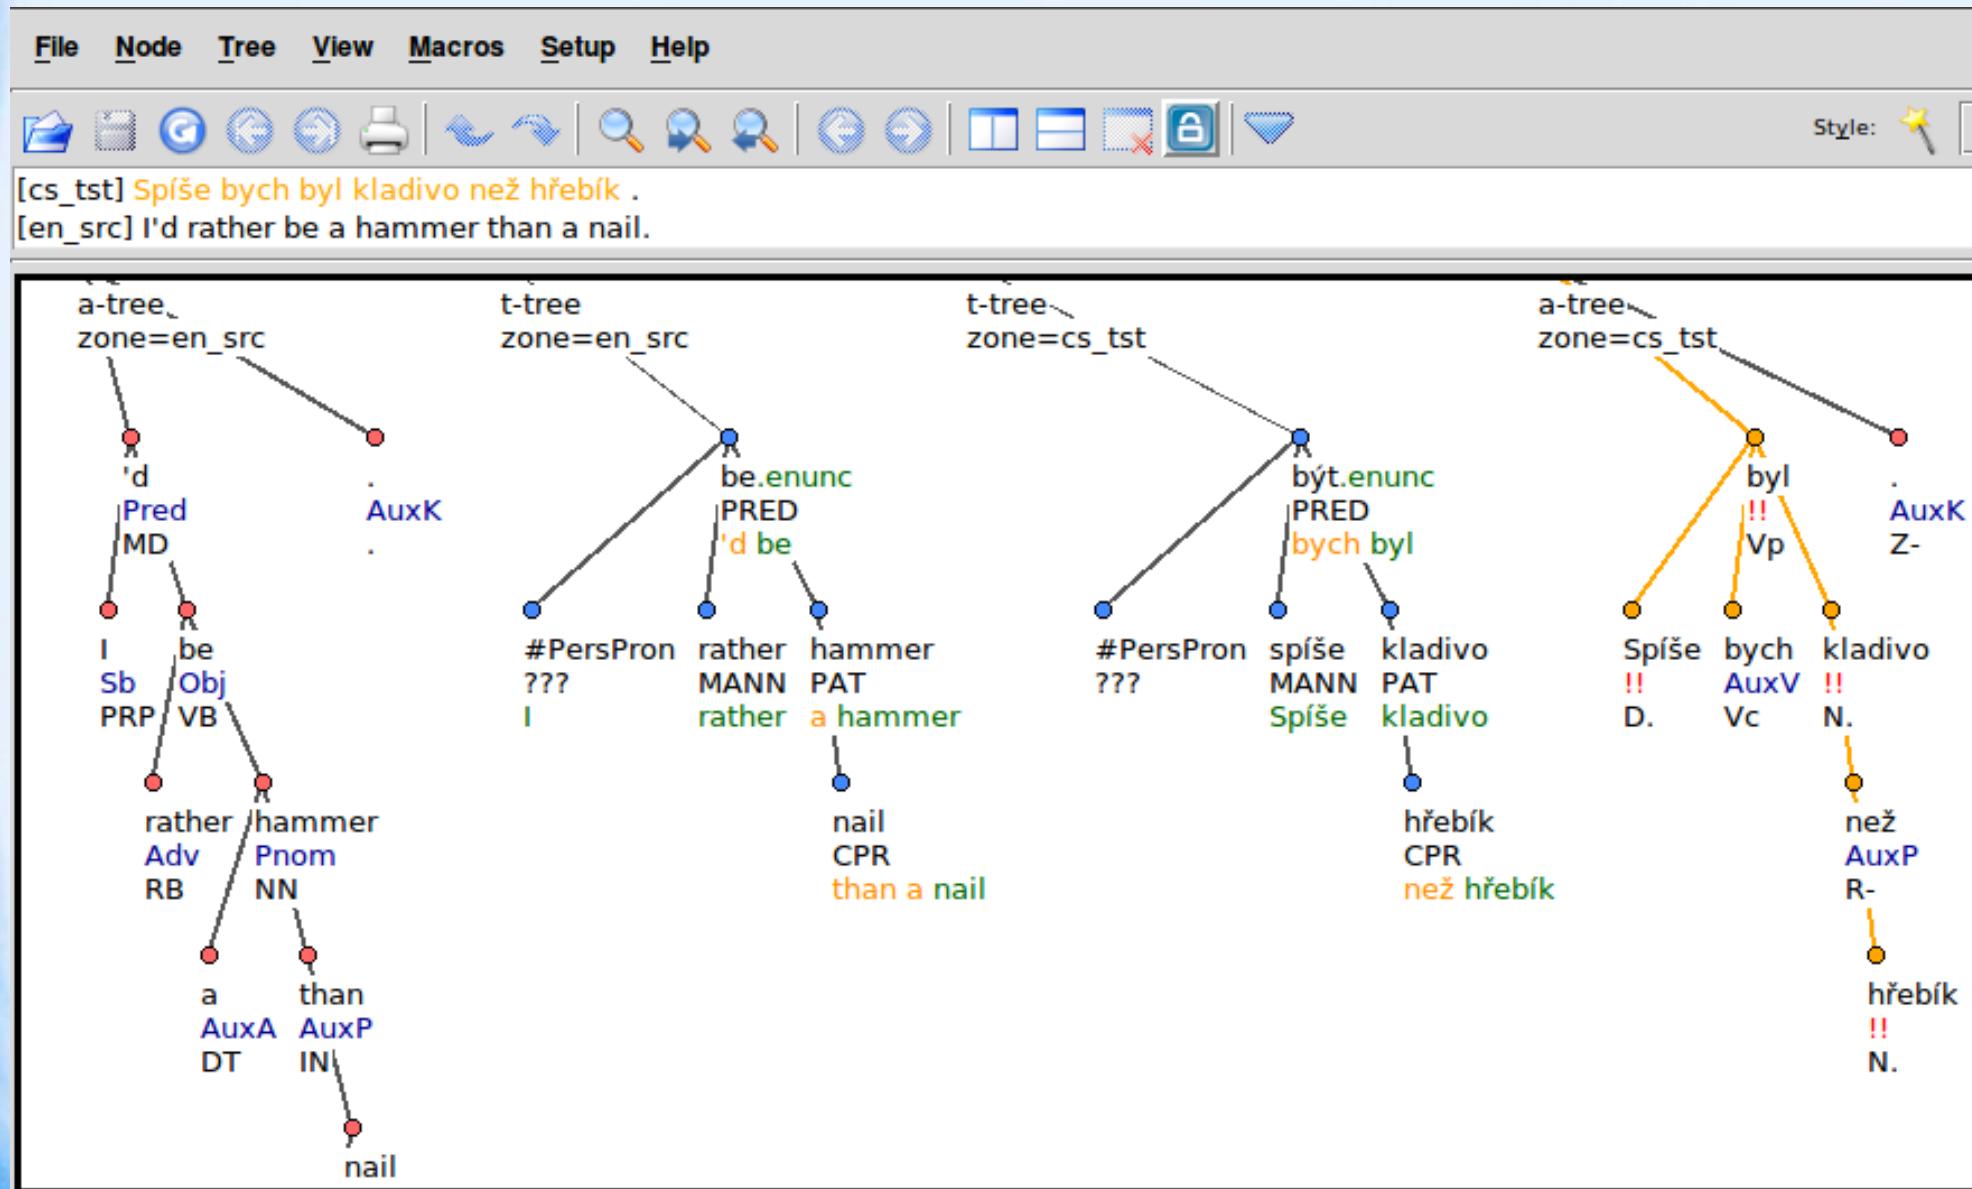

A bird in the hand is worth
two in the bush.

Pták v ruce je cenný
dvakrát v Bushovi.

Cooperation is welcome

- Exploit English a-layer or t-layer for your project
- Try your dependency parser instead of MST
(extrinsic evaluation)
- Try your machine learning (CRF, SVM, NN,...)
instead of our MaxEnt dictionary

Thank you
