Outline

- Motivation
 - searching in complex lexicons
- Valency lexicons for a demonstration
- PML format
 - Viewing – TrEd
 - Searching – PML-TQ
 - Interlinking

Motivation

- Electronic lexical resource (an example):
 - Simple bilingual dictionary
- What we need to find?
 - search the lemma *look* 1. (*gaze, stare*) regarder; 2. ...

Motivation

- Electronic lexical resource (an example):
 - Simple bilingual dictionary
- What we need to find?
 - search the lemma *look* 1. (*gaze, stare*) regarder; 2. ...
 - fulltext search "*looking forward to*"

Motivation

- Electronic lexical resource (an example):
 - Simple bilingual dictionary

- What we need to find?

- search the lemma *look* 1. (*gaze, stare*) regarder; 2. ...
- fulltext search "*looking forward to*" ... c. she's **looking forward to** going on holiday → elle a hâte de partir en vacances ...
- regular expressions */look.* to/*

Motivation

- Electronic lexical resource (an example):
 - Simple bilingual dictionary

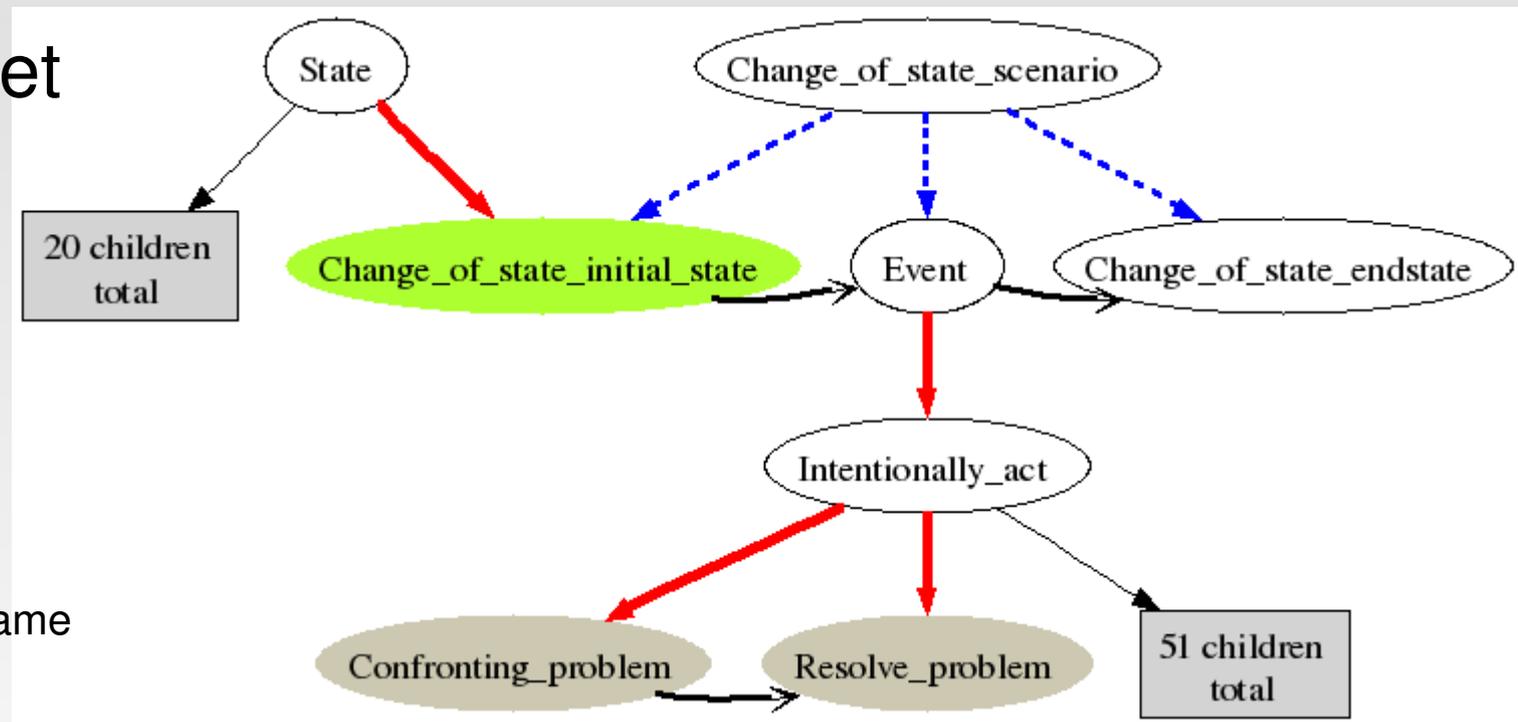

- What we need to find?

- search the lemma *look* *1. (gaze, stare) regarder; 2. ...*
- fulltext search *"looking forward to"* *... c. she's **looking forward to** going on holiday → elle a hâte de partir en vacances ...*
- regular expressions */look.* to/*
- advanced search? *"a word with more than five translations"* ***stand** → 1. se lever; 2. tenir debout; 3. se trouver; 4. marcher sur; 5. rester valable; 6. se présenter; ...*

Motivation (2)

- Lexicons with complex hierarchical structure (1)

- FrameNet

Searching for:

- lemma
- name of the frame

Motivation (3)

- Lexicons with complex hierarchical structure (2)
 - VerbNet

Searching for:

- lemma

ROLES		REF
♦	AGENT [+ANIMATE +ORGANIZATION]	
♦	THEME	
♦	SOURCE [+ANIMATE [+LOCATION & -REGION]]	
♦	BENEFICIARY [+ANIMATE]	

FRAMES		REF	KEY
NP V NP			
EXAMPLE	"The thief stole the paint."		
SYNTAX	<u>AGENT</u> V <u>THEME</u>		
SEMANTICS	MANNER(DURING(E), ILLEGAL, AGENT) HAS_POSSESSION(START(E), ?SOURCE, THEME) HAS_POSSESSION(END(E), AGENT, THEME) NOT(HAS_POSSESSION(END(E), ?SOURCE, THEME)) CAUSE(AGENT, E)		
NP V NP PP.SOURCE			
EXAMPLE	"The thief stole the paint from the museum."		
SYNTAX	<u>AGENT</u> V <u>THEME</u> {+SRC} <u>SOURCE</u>		
SEMANTICS	MANNER(DURING(E), ILLEGAL, AGENT) HAS_POSSESSION(START(E), SOURCE, THEME) HAS_POSSESSION(END(E), AGENT, THEME) NOT(HAS_POSSESSION(END(E), SOURCE, THEME)) CAUSE(AGENT, E)		
NP V NP PP.BENEFICIARY			
EXAMPLE	"The thief stole the paint for Mary."		
SYNTAX	<u>AGENT</u> V <u>THEME</u> {FOR} <u>BENEFICIARY</u>		
SEMANTICS	MANNER(DURING(E), ILLEGAL, AGENT) HAS_POSSESSION(START(E), ?SOURCE, THEME) HAS_POSSESSION(END(E), BENEFICIARY, THEME) NOT(HAS_POSSESSION(END(E), ?SOURCE, THEME)) CAUSE(AGENT, E)		

Motivation (4)

- Lexicons with complex hierarchical structure (3)
 - Corpus Pattern Analysis

Last

No.	%	Pattern / Implicature
<u>1</u>	86%	[[Eventuality Physical Object Psych]] last [NO OBJ] [Adv[Time]] [[Eventuality Physical Object Psych]] continues (to exist) for a particular length of time expressed by [Adv[Time]]
<u>2</u>	13%	[[Eventuality Physical Object]] last [NO OBJ] [NO ADVL] [[Eventuality Physical Object]] continues to exist for a long time
<u>3</u>	2%	[[Physical Object]] last [[Human]] [Adv[Time]] [[Physical Object]] does not run out and is enough for [[Human]] for [Adv[Time]]

Searching for:

- lemma

Motivation (5)

- Lexicons with complex hierarchical structure (4)

- VerbaLex

vyčkat₁^{pf} **vyčkávat**₁^{impf} **počkat**₂^{pf} **čekat**₅^{impf}
definition: odkládat něco na pozdější dobu
class: linger-53.1
passive: no

Searching for:

- lemma

Lists for

- verb roles
- morphemic roles
- verb classes, etc.

1 čekat₅, vyčkat₁, vyčkávat₁, počkat₂ ≈

-frame: **AG**<person:1>_{kdo1}^{obl} **VERB**^{obl} **ACT**<act:2>_{s+čím7}^{obl}

-example: počkal s nákupy (pf)

-example: vyčkal s odjezdem (pf)

-example: čekal s přípitkem (impf)

-synonym:

-use: prim

-reflexivity: no

2 čekat₅, vyčkat₁, vyčkávat₁, počkat₂ ≈

-frame: **AG**<person:1>_{kdo1}^{obl} **VERB**^{obl} **ACT**<act:2>_{s+čím7}^{obl} **TIME**<point:6>_{do+čeho2}^{obl}

-example: počkali se zahájením porady do čtyř hodin (pf)

-synonym:

-use: prim

-reflexivity: no

Motivation (6)

- Example query
 - find a reflexive verb
with optional TIME complement
realized in other than prepositional genitive case
that has more than two synonyms
 - hardly by a regular expression

Motivation (6)

- Example query
 - find a reflexive verb with optional TIME complement realized in other than prepositional genitive case that has more than two synonyms
 - hardly by a regular expression

3 objevit se₁, objevovat se₁, vzniknout₁, vznikat₁, vyvinout se₃, vyvíjet se₃ ≈
-frame: **ENT**<entity:1>^{obl}_{col} **VERB**^{obl} **LOC**<origin:1>^{obl}_{v+čem6, na+čem6} **TIME**<start:2>^{opt}_{v+čem6}
-example: *pivo se objevilo v Čechách v 10. století (pf)*
-example: *pivo vzniklo na našem území (pf)*
-synonym: dělat se₁, vzejít₄, vzcházet₄
-use: prim
-reflexivity: no (vzniknout, vznikat); refl (objevit se, objevovat se, vyvinout se, vyvíjet se)

Motivation (6)

- Example query
 - find a reflexive verb with optional TIME complement realized in other than prepositional genitive case that has more than two synonyms
 - hardly by a regular expression

3 objevit se₁, objevovat se₁, vzniknout₁, vznikat₁, vyvinout se₃, vyvíjet se₃ ≈
-frame: **ENT**<entity:1>^{obl}_{col} **VERB**^{obl} **LOC**<origin:1>^{obl}_{v+čem6, na+čem6} **TIME**<start:2>^{opt}_{v+čem6}
-example: pivo se objevilo v Čechách v 10. století (pf)
-example: pivo vzniklo na našem území (pf)
-synonym dělat se₁, vzejít₄, vzcházet₄
-use: prim
-reflexivity: no (vzniknout, vznikat) refl objevit se, objevovat se, vyvinout se, vyvíjet se)

Motivation (6)

- Example query
 - find a reflexive verb with optional TIME complement realized in other than prepositional genitive case that has more than two synonyms
 - hardly by a regular expression

3 objevit se₁, objevovat se₁, vzniknout₁, vznikat₁, vyvinout se₃, vyvíjet se₃ ≈
-frame: **ENT**<entity:1>^{obl}_{col} **VERB**^{obl} **LOC**<origin:1>^{obl}_{v+čem6, na+čem6} **TIME**<start:2>^{opt}_{v+čem6}
-example: pivo se objevilo v Čechách v 10. století (pf)
-example: pivo vzniklo na našem území (pf)
-synonym: dělat se₁, vzejít₄, vzházet₄
-use: prim
-reflexivity: no (vzniknout, vznikat) **refl** objevit se, objevovat se, vyvinout se, vyvíjet se)

Motivation (7)

- What (and how) we want to search in lexicons?
- How we want to display it?

- a sophisticated way to search lexicons with complex structure

Goal: Universal advanced searching

- As a case study: PDT-VALLEX and VALLEX 2.5
 - similar approaches, different formats and information
- What we want to do with them?
 - interlink lemmas and their lexical units
 - facilitate searching and browsing in linked lexicons
- Tools
 - search engine and viewer
 - universal, adaptable for other lexicons

Two Czech lexicons

Lexicons	PDT-VALLEX	VALLEX 2.5
PoS	verbs, some nouns and adjectives	verbs
lemmas	at least once in PDT	most frequent ones and their aspectual counterparts
frames	at least once in PDT	~ all
frame information - core	frame, gloss, example	
- further	syntactic information on functors, frame frequency in data	reciprocity, reflexivity, grammatical control, syntactico-semantic class
- linking	linked with the occurrences in PDT	no linking
lexicon unit	lemma	lexeme

Unit: Lemma vs. Lexeme

Why lexemes?

- Advantages

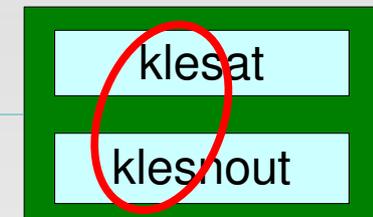

- theoretical adequacy
- compact representation
- convenience for human users

- Disadvantages

- complex format, hard to process

The common vallex_pml format

The common vallex_pml format

The common vallex_pml format

Prague Markup Language

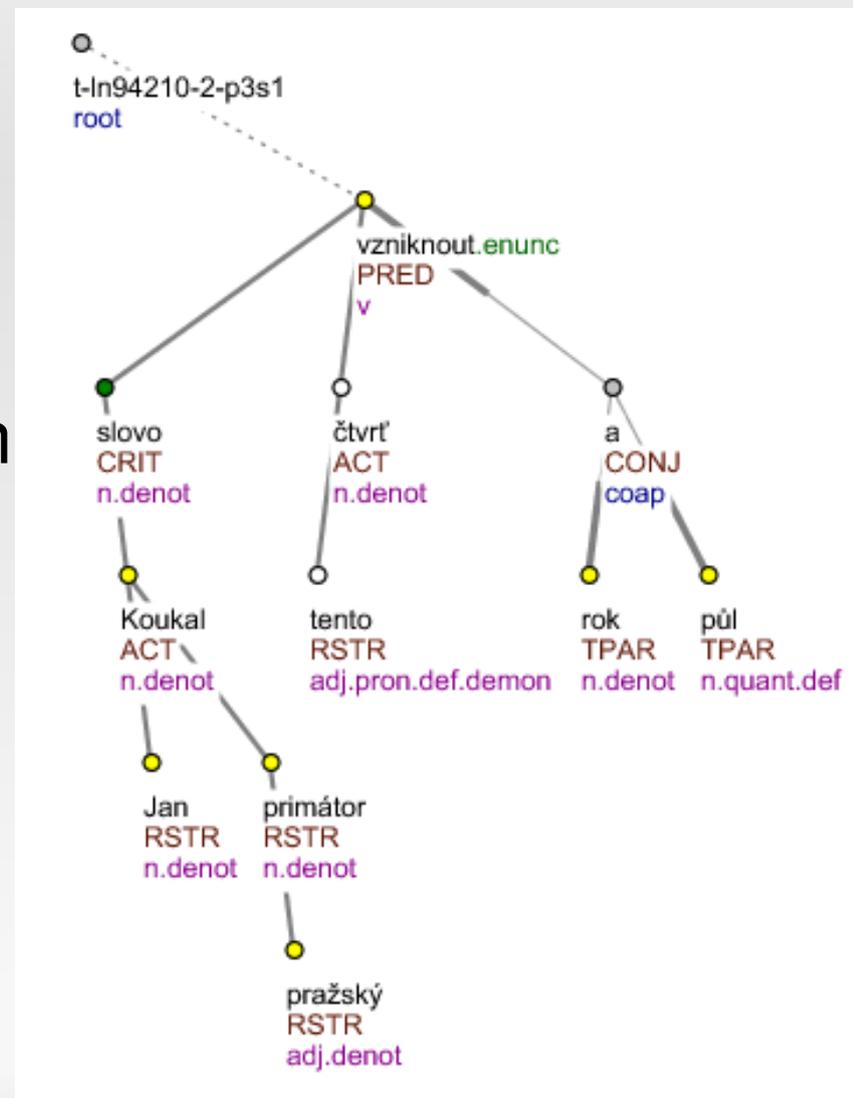

- Lexicon transformed into PML format
 - <http://ufal.mff.cuni.cz/jazz/PML>
 - XML-based
 - described by a PML-schema
 - automatically from DTD
 - PML roles (next slide)

Prague Markup Language (2)

- Reasons for PML
 - suitable common representation
 - can be displayed as a tree in the tree editor TrEd
 - PML roles (define nodes etc.)
 - and searched by PML-TQ

Prague Markup Language (2)

- Reasons for PML
 - suitable common representation
 - can be displayed as a tree in the tree editor TrEd
 - PML roles (define nodes etc.)
 - and searched by PML-TQ

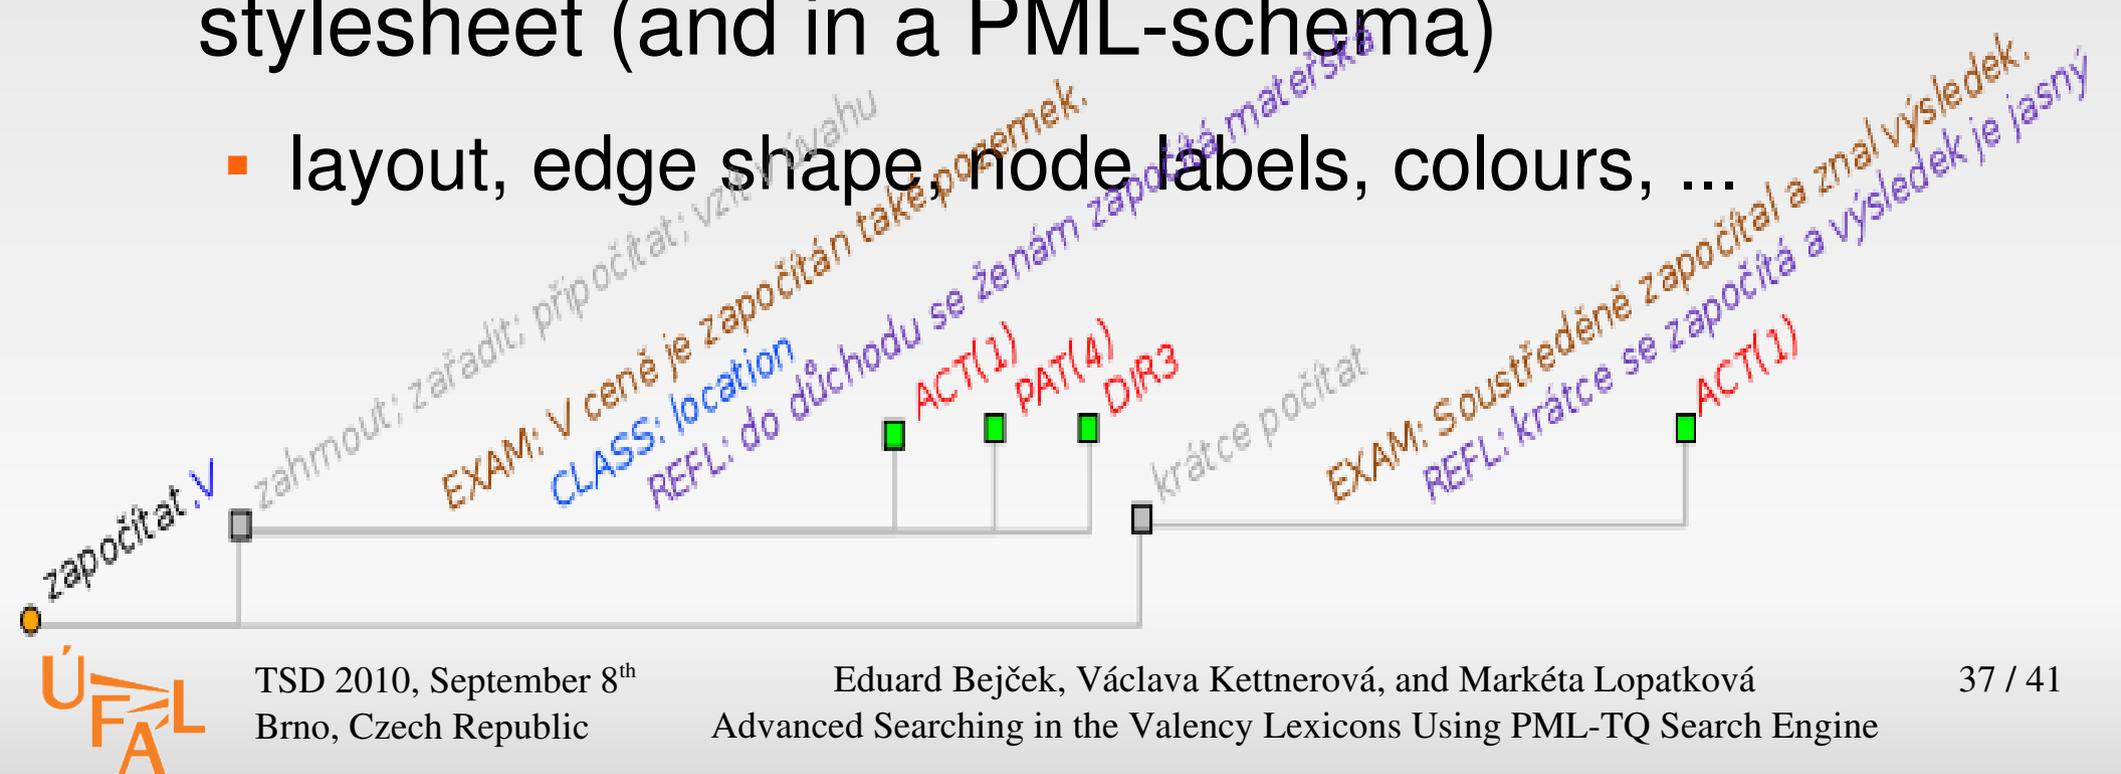

What can we do with lexicons?

- A) Display, go through
 - each lexicon entry as one "tree"
- B) Search, display the search
 - query in the form of a tree with constrains
- C) Interlink, display these links
 - links within a single lexicon
 - links to the other lexicon

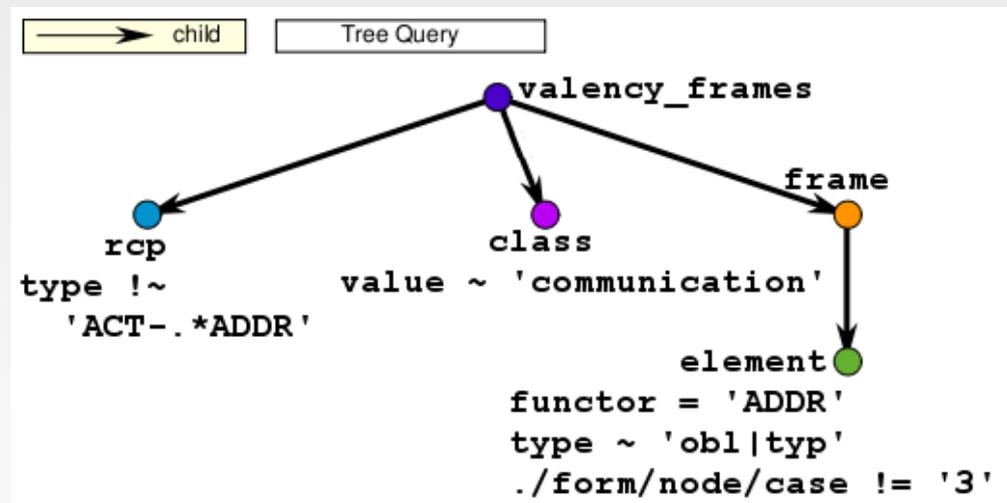

A) Viewing in TrEd

- TrEd <http://ufal.mff.cuni.cz/~pajas/tred/>
- lexicon entry (= a verb) as a tree
- the specific appearance is defined in a stylesheet (and in a PML-schema)
 - layout, edge shape, node labels, colours, ...

B) Searching by PML-TQ

- PML Tree Query
<http://ufal.mff.cuni.cz/~pajas/pmltq/>
- a query created in a graphical mode – by drawing a subtree (with possible constraints) to search
- verbs from the class 'communication' with obligatory ADDR realized in other than dative case that cannot be in a reciprocity relation with ACT

B) Searching by PML-TQ (2)

- textual alternative to each query
- further processing ("filters")
 - frequency of found lemmas in individual verb classes
 - can be appended to any query
 - generate simple text table

C) Interlinking

- Three types
 - aspectual counterpart
 - lemma variant
 - same lemma/frame in the other lexicon (future work)
- view the linked lemma/frame in TrEd

Conclusion

- format for linking valency lexicons
- universal method, adaptable for other lexicons
- any tree-like structure (XML based lexicon)
- necessary modifications
 1. PML-schema from DTD
 2. assignment of PML roles
 3. stylesheet
 4. (transfer into the database)

Thank you.
