

Information Structure and Anaphoric Links – A Case Study and Probe

Eva Hajičová, Anna Nedoluzhko
Charles University in Prague

- “Semantics (as the study of meaning) is central to the study of communication. (p. ix) ... The final category of meaning ... is *thematic meaning*, or what is *communicated* by the way in which a speaker or writer organizes the message in terms of ordering, *focus*, and emphasis.” (p.22) (Leech 1974)

- Communication – *anaphoric links*
- Semantics – *information structure*

Topic-Focus Articulation

- * Topic-focus articulation (**information structure**): reflects the cognitively based ,given' – ,new' strategy BUT belongs to the **systems** of individual languages rather than to the domain of cognition
- * the description of TFA is an integral part of the representation of the (literal) **meaning of the sentence** (Sgall et al. 1986) = TFA is semantically relevant
- * a declarative sentence asserts that its Focus holds about its Topic:
FOCUS (TOPIC)

Primary distinction: contextual boundness

- The primary opposition for the description of TFA: the distinction of **contextually bound** (*cb*) and **non-bound** (*nb*) items.
- “Contextual boundness” should not be understood in a straightforward etymological way: an *nb* element may be ‘known’ in a cognitive sense (from the context or on the basis of background knowledge) but structured as non-bound, ‘**non-identifiable**’:
 - John called Mary a Republican.
 - Then she insulted HIM. X Then she INSULTED him.

Contextual Boundness (TFA)

a specific **TFA attribute** in the **Prague Dependency Treebank** values:

t for a non-contrastive **contextually bound node**

c for a **contrastive contextually bound node**

f for a contextually **non-bound node**

(Preceding context: Irena had two boyfriends and separated from both of them).

She had separated from her first boyfriend with no great pain.

The dichotomy of Topic and Focus on the basis of the values of this attribute:

TOPIC: *She had separated from her first boyfriend*

FOCUS: *with no great pain*

Anaphoric links

- coreference

Irena was in love. She knew that.

- bridging relations

I looked into the room. The ceiling was very high.

- reference to a text segment

Mary suggested to visit John's mother. She also proposed to go swimming. Her last wish was to look at the city center. John denied it all.

Contextual Boundness and Anaphoric Links

Irena had two boyfriends and separated from both of them.

bridging relation:
set – element of the set

She had separated from her first boyfriend_{cb} with no great pain.

Contextually Bound Nouns

Contextually Bound Nouns

Why?

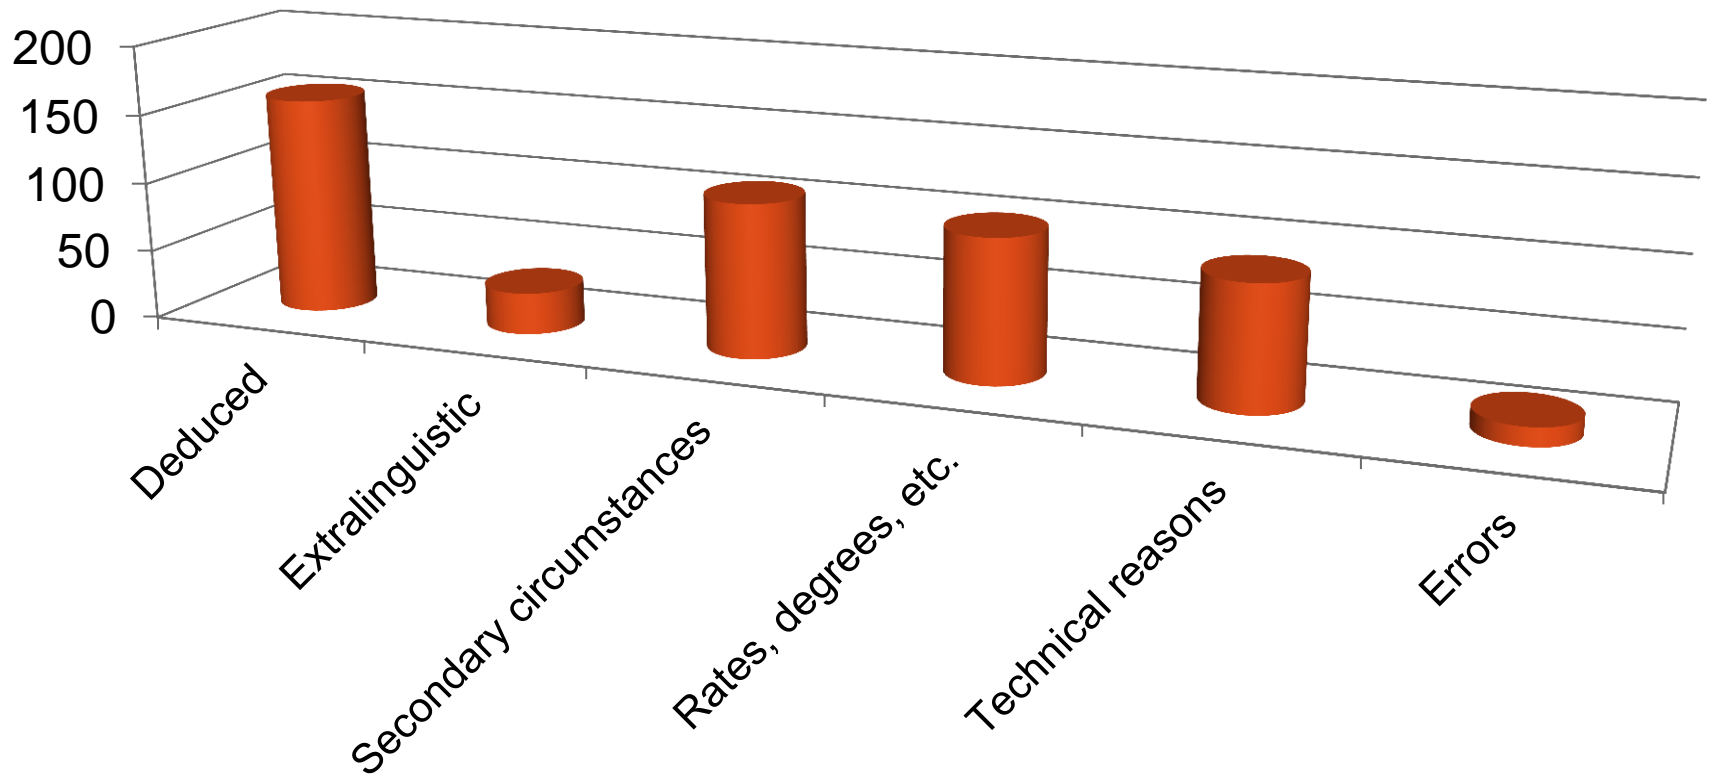

Analyzed Data

- 500 cases from PDT
 - not elided, present on surface
 - study of possible reasons
 - distribution between reasons is not sharp

Reasons of contextual boundness without anaphoric links

- Contextual boundness is deduced from some kind of **semantic** or **pragmatic** relation to the previous context
- Contextual boundness of a noun group has **extralinguistic** reasons - **world knowledge**
- Contextually bound expressions represent rates, degrees, scales, proportions, etc.
- **Technical** reasons
- **Errors**

Reasons of contextual boundness without anaphoric links

Reasons (1): Contextual boundness is deduced from some kind of semantic or pragmatic relation to the previous context

According to this law, the insurance companies, which do not have the authorization, are not allowed to tender their products here.

Yet it seems that the best hope for alleviating the waves is the stormy weather that forecasters expect from today.

Reasons (1): Summary

- Contextual boundness is deduced from previous context from relations **close to bridging relations** (types *SUBSET*, *CONTRAST*, *ANAPH*, etc.); however, these relations have not been annotated in PDT because of their **vague** nature and high **ambiguity** in the given context;
- Contextual boundness is deduced from the relation of **co-hyponymy** in a broad sense;
- Contextual boundness is deduced from **general topic of the text**;
- Contextual boundness is given by **anaphoric adjectives**;
- Contextual boundness is **part of formal characteristics** (addresses, sport lists, etc.)

Reasons (2) Contextual boundness of a noun group has extralinguistic reasons

Complete information for small investors in Lidove noviny are at two sites.

the reader has the paper in his hands when reading this sentence

(The) double page was prepared by Jaromír Složil.

the same, can be used with a definite article or without

Reasons(3): A noun group refers to „scene“ settings

temporal setting

In December last year, a detached workplace of the future institute appeared in the Musical Theatre in Berlin.

local setting

Another trend, which is even prescribed by the construction or reconstruction of administration buildings in some countries, is structured cabling.

Reasons (4): Contextually bound expressions represent rates, degrees, scales, proportions, etc.

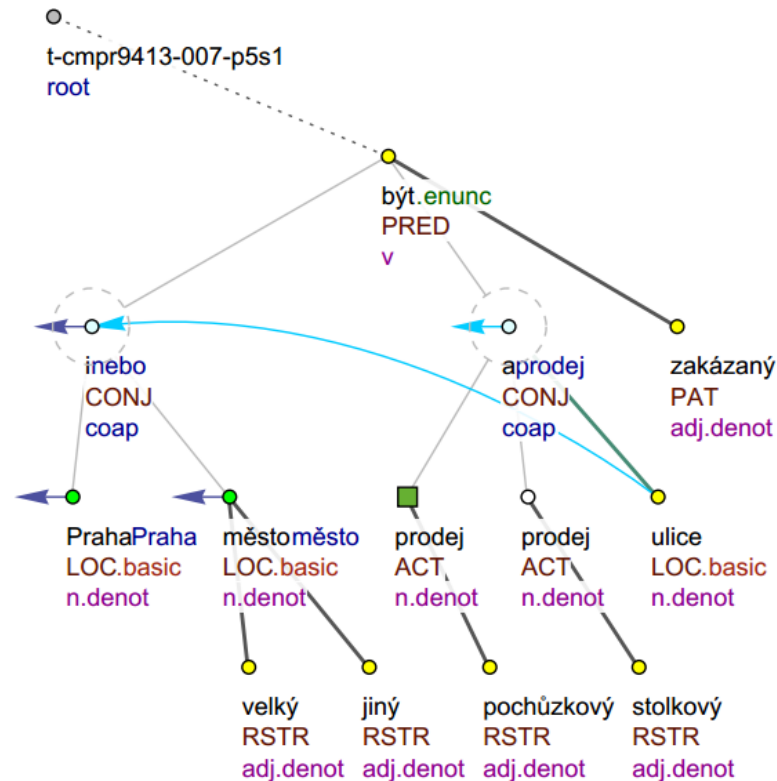

- *According to the Czech Statistical Office, the largest amount of production was achieved in wheat, which was estimated to 3,718 million tons.*
- *The Indonesia's minimum daily wage is one and a half dollar and sometimes workers must work during 10 to 12 hours.*
- *During the same period, the employment at the airport increased from 1,250 to 2,200 people*

Reasons (5): Technical reasons

- reference – yes, link – no
- due to
 - conventions based on tectogrammatical structure of PDT trees (**reconstruction of ellipses**, expressions with some tectogrammatical functors)
 - **multiword expressions** (including constructions with functional words).

anaphoricity of unlinked expressions may be deduced

Reasons (5): Technical reasons

*V Praze i v jiných velkých městech je pochůzkový [prodej] a stolkový prodej na ulicích zakázaný.
[In Prague and other big cities, walk [selling] and table selling on the streets is prohibited.]*

Summary

- Largest group: (i) association given by **semantic** and **pragmatic** reasons
- Next largest group: (ii) **world knowledge** and broader extralinguistic context
- **Technicalities**: mainly in coordinate structures: reconstruction of deletions
- Lessons learned for future work: **re-examination** of annotation of coreferential links for **groups (i) and (ii)**
