#### Abstract

The 2019 Shared Task at the Conference for Computational Language Learning (CoNLL) was devoted to Meaning Representation Parsing (MRP) across frameworks. Five distinct approaches to the representation of sentence meaning in the form of directed graph were represented in the training and evaluation data for the task, packaged in a uniform abstract graph representation and serialization. The task received submissions from eighteen teams, of which five do not participate in the official ranking because they arrived after the closing deadline, made use of additional training data, or involved one of the task coorganizers. All technical information regarding the task, including system submissions, official results, and links to supporting resources and software are available from the task web site at:

```
http://mrp.nlpl.eu
```

## A Background

This file provides a 'virtual appendix' to the task overview paper (Oepen et al., 2019) for the shared task on Cross-Framework Meaning Representation Parsing (MRP) at the 2019 Conference for Computational Language Learning (CoNLL). The appendix provides more detailed evaluation results, broken down by both individual frameworks and different component types in the semantic graphs.

## B Cross-Framework Metric

Tables 1 through 5 provided per-framework results using the official MRP metric, reporting precision $(\mathrm{P})$, recall $(\mathrm{R})$, and $\mathrm{F}_{1}$ score $(\mathrm{F})$.

## C Framework-Specific Metrics

This section provides per-framework results using the pre-existing framework-specific metrics: SDP (Oepen et al., 2014) for the bi-lexical DM and PSD graphs in Tables 6 and 7; EDM (Dridan and Oepen, 2011) for the EDS frameworks in Table 8; the SemEval 2019 UCCA metric (Hershcovich et al., 2019) in Table 9; and, finally, SMATCH scores (Cai and Knight, 2013) for AMR in Table 10.
