---

morphology

## auxiliary verbs

*John is preparing his homework.*

*John has been attending the school since 2011.*

*Byl by přišel včas.*

*Bude chodit včas.*

syntactic core  
of (surface) sentence

copula

Pred

light verbs

modal verbs  
phase verbs

Pred

semantic core

full/lexical/autosemantic verbs

Pred

---

# Copula

- a word used to link the subject of a sentence with a predicate
- semantically empty, but syntactic center

*Mary and John **are** my friends.*

*The sky **was** blue.*

*I **am** taller than most people.*

*The birds and the beasts **were** there.*

# Copula

- a word used to link the subject of a sentence with a predicate
- semantically empty, but syntactic center

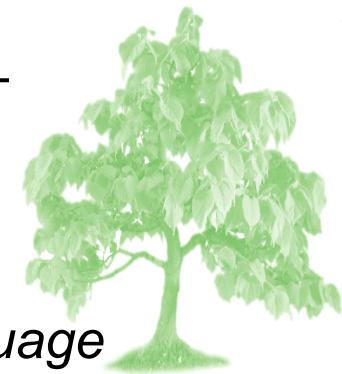

*Mary and John **are** my friends.*

*The sky **was** blue.*

*I **am** taller than most people.*

*The birds and the beasts **were** there.*

- it expresses
  - identity ... *The Morning Star is the Evening Star.*
  - membership of a class or a subset relationship ... *She was a nurse.*
  - express some property, relation or position, permanent or temporary:  
*The trees are green.*  
*I am your boss.*  
*John was in England.*  
*The children are confused.*
- main/principal copula .... typically (equivalent of) "to be"  
*plus* "verbs equivalent in function to the principal copula, the verb "be"  
→ no clear cut between copular verbs and full verbs

# Copula

Randolph Quirk: *A comprehensive grammar of the English Language*

"A verb is said to have a copular complementation when it is followed by a **subject complement** or a **predicational adjunct**, and when this complement cannot be dropped without changing the meaning of the verb.

The verb in such a clause is a copular (or linking) verb, and is equivalent in function to the principal copula, the verb *be*."

**current copulas** (typically stative):

- (i) **be** (friendly) (my friend)
- (ii) appear (happy) (the only solution)  
feel (annoyed) (a fool)  
look (pretty) (a fine day)  
seem (very restless)(a genius)  
smell (sweet)  
sound (surprised) (a reasonable idea)  
taste (bitter)
- (iii) remain (uncertain) (good friends)  
keep (silent)  
stay (motionless)

**resulting copulas:**

- (iv) **become** (older) (an expert)  
come (true)  
end up (happy) (her slave)  
get (ready)  
go (sour)  
grow (tired)  
prove (rather useful)(his equal)  
turn (cold) (traitor)  
turn out (fortunate) (a success)  
wind up (drunk) (a millionaire)

# Copula in Czech

Czech ling. tradition:

**Sponová slovesa** se využívají v přísudku slovesně-jmenném (přísudek jmenný se sponou), kde jsou doplněna jménem.

Mezi sponová slovesa patří **být, bývat, stát se, stávat se** a v záporu **nebýt, nebývat, nestat se a nestávat se**.

Marta je nemocná.

Simona bývala učitelkou.

Petr se stal lékařem.

(jinde též mít, zůstat, zdát se)

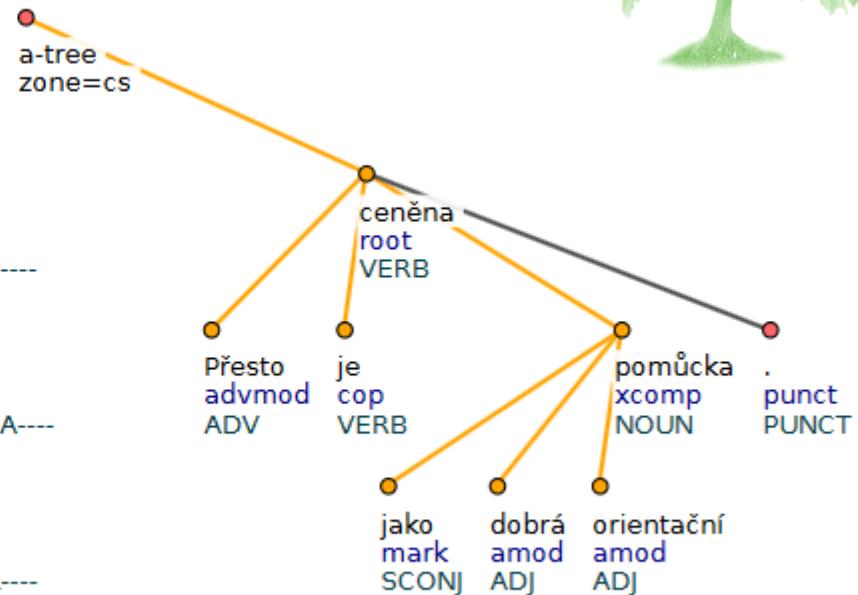

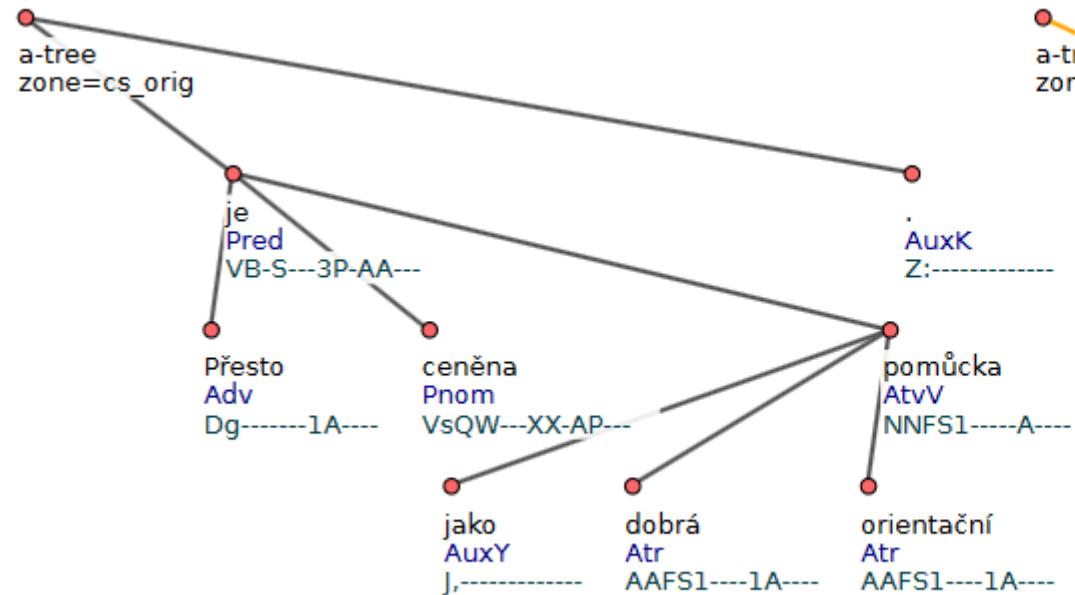

# Copula in data (Czech and English)

**LINDAT/CLARIN** ... provides technical background and assistance  
... to share, create and modernise their **tools** and **data** used for research in linguistics  
... also provides an open digital repository and archive open to all academics

# Copula in HamleDT for Czech (PDT vs. UDs, version 1)

<http://lindat.mff.cuni.cz/services/pmltq/#!/home>

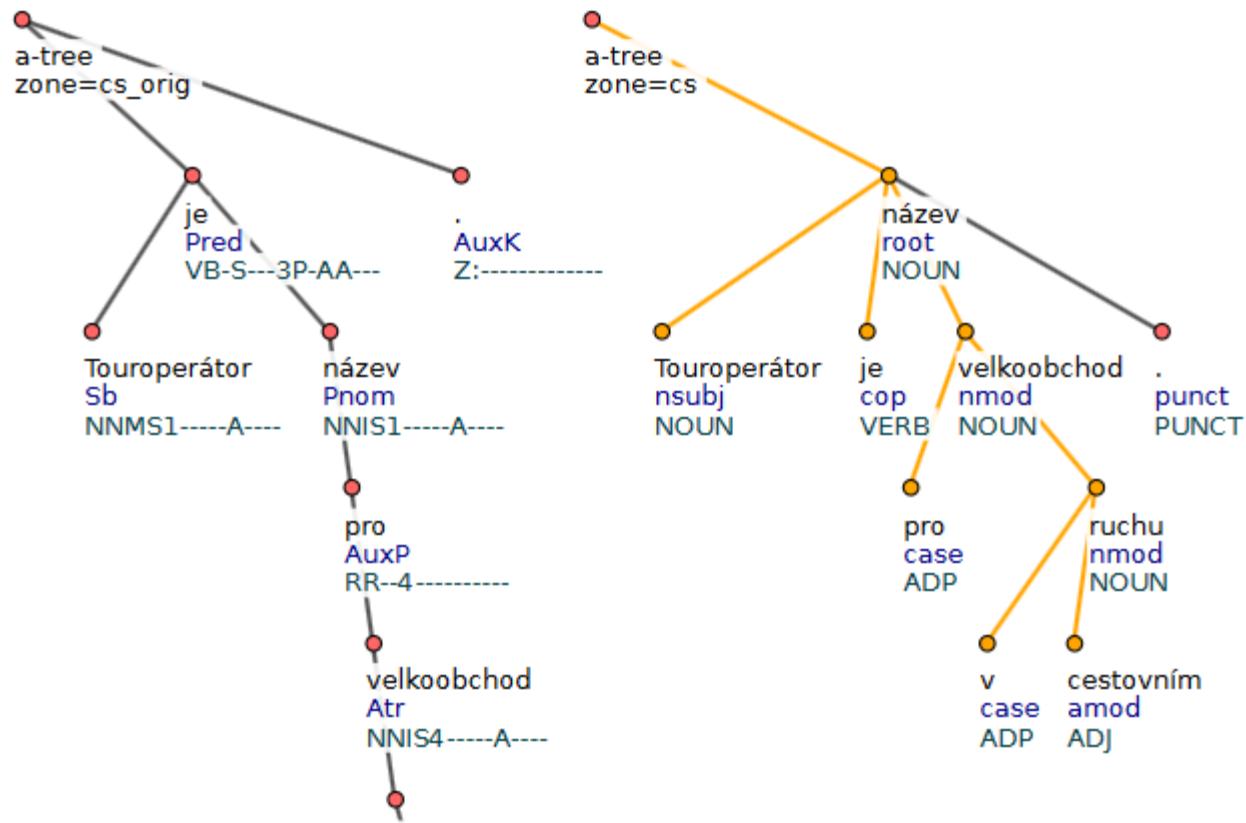

PML-TQ query:

```
a-node $pred :=  
[id ~ "prague", depth() = "1",  
 1x a-node [ afun = "Pnom",  
 ],  
 ]  
>> for $pred.lemma give $1, count()  
>> sort by $2 desc
```

# Copula in HamleDT for Czech (PDT vs. UDs, version 1)

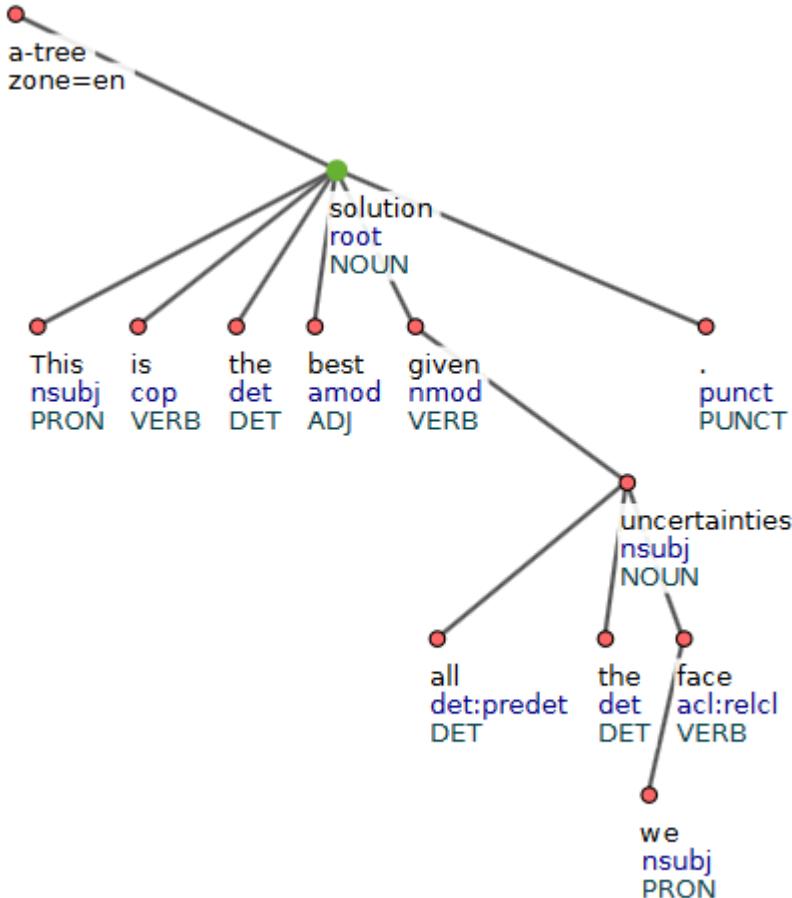

<http://lindat.mff.cuni.cz/services/pmltq/#!/home>

lemma	count
být	7974
bývat	41
:	37
a	10
-	5
čí	2
=	2
bývávat	2
respektive	1
,	1
totiž	1

# Copula for English in UDs, version 1

<http://lindat.mff.cuni.cz/services/pmltq/#!/home>

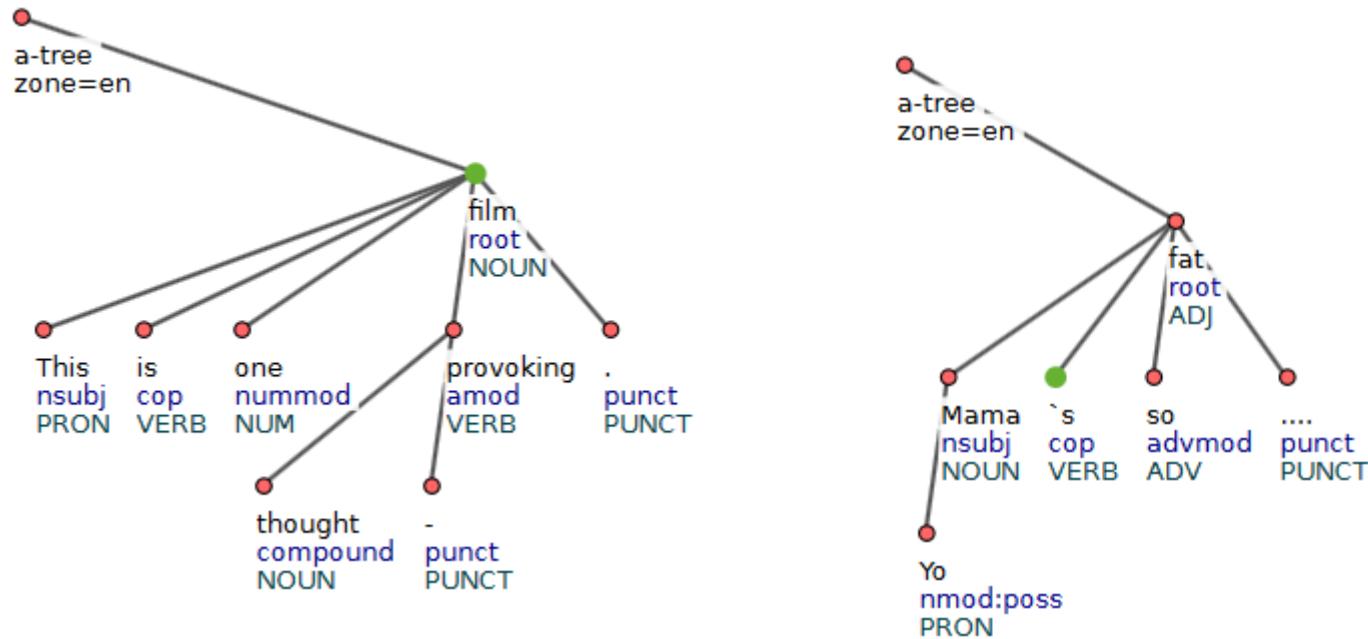

PML-TQ query:

```
a-node $cop := [ deprel = "cop" ]  
>> for $cop.lemma give $1, count()  
>> sort by $2 desc
```

# Copula for English in UDs, version 1

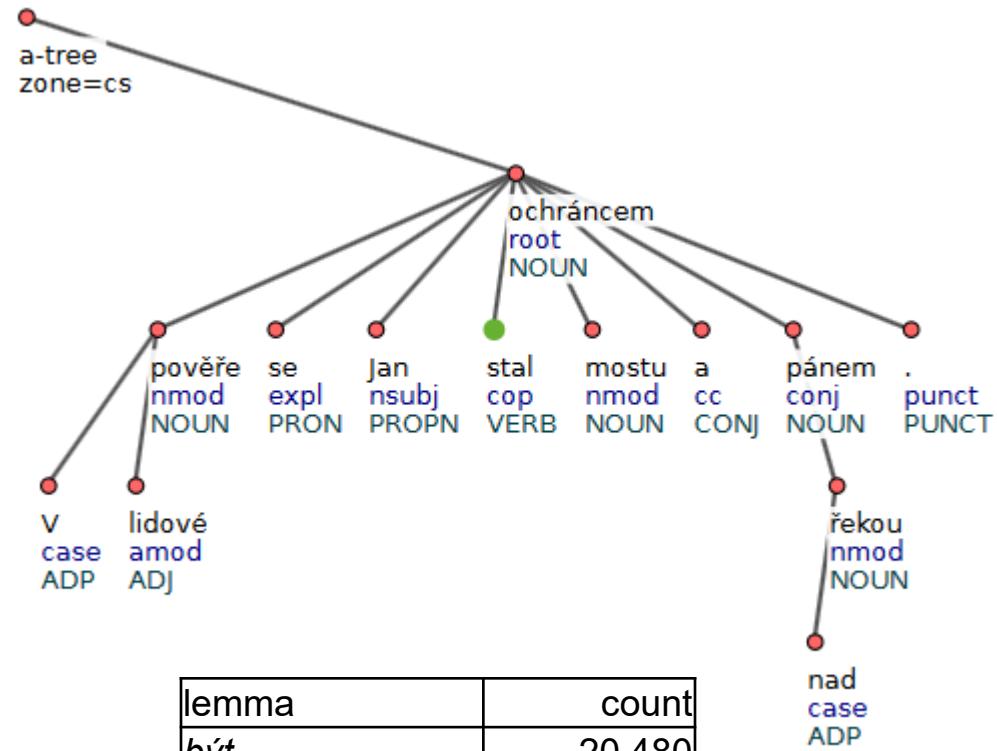

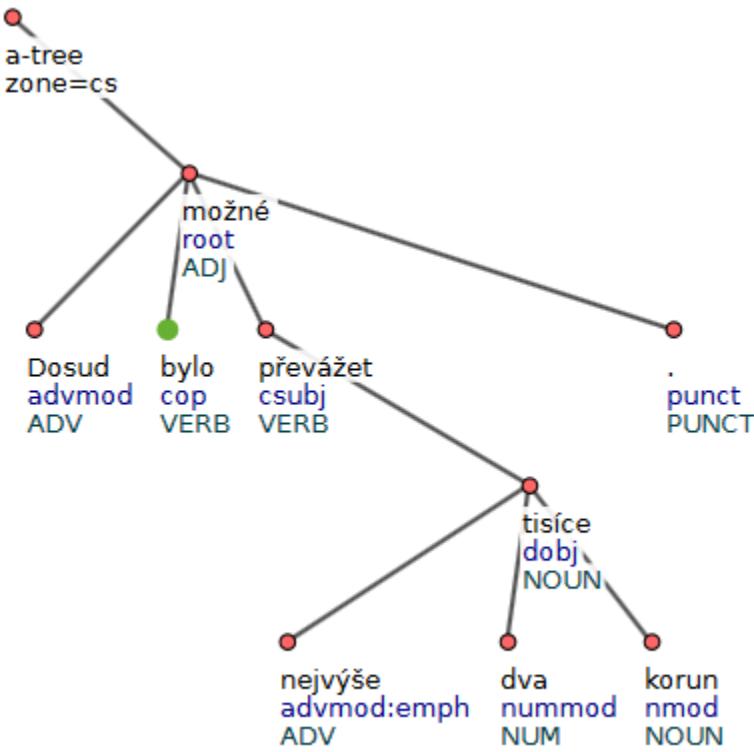

<http://lindat.mff.cuni.cz/services/pmltq/#!/home>

copula	count	example
be	5598	This is one thought-provoking film.
`s	8	"Yo Mama`s so fat ...."
'	1	"so, enemy, what's your point?"
b	1	"o and the cheaper the better (we are trying to save money now, sooo..thatd b helpful) thanks"

# Copula for Czech in UDs, version 1

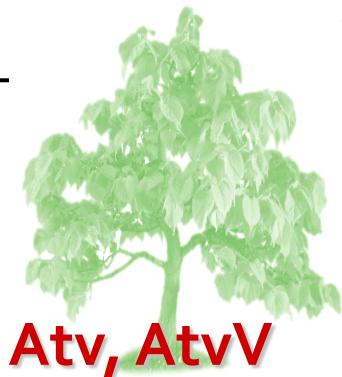

lemma	count
být	20 480
bývat	110
stát	3
bývávat	3
moci	1
mít	1

---

# "Doplněk" ~ verbal attribute

# "Doplňek" ~ verbal attribute

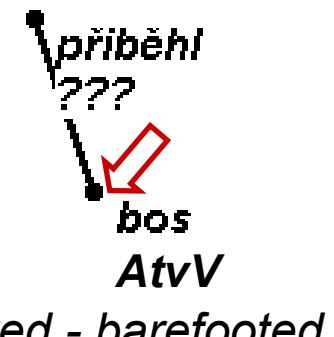

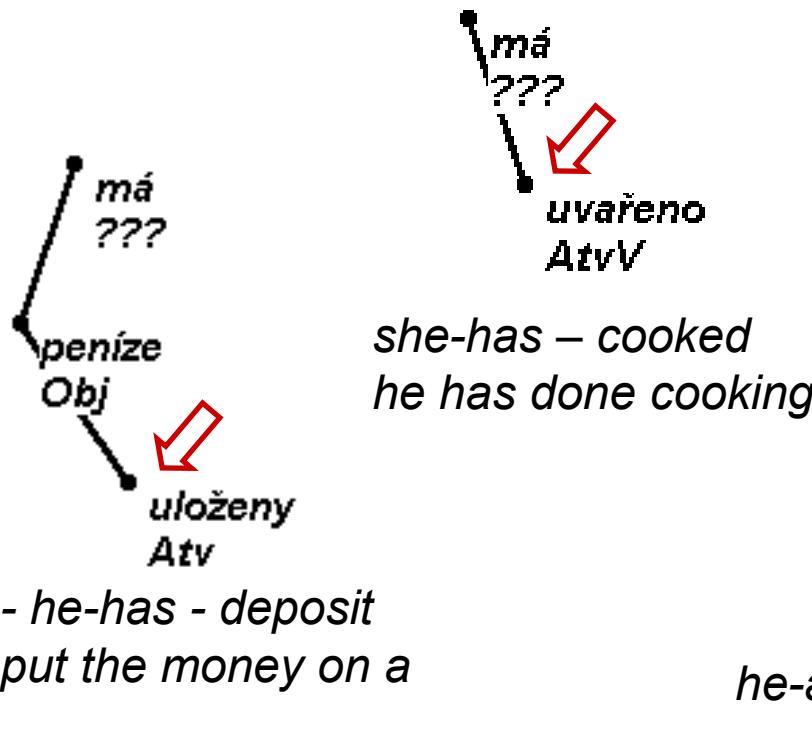

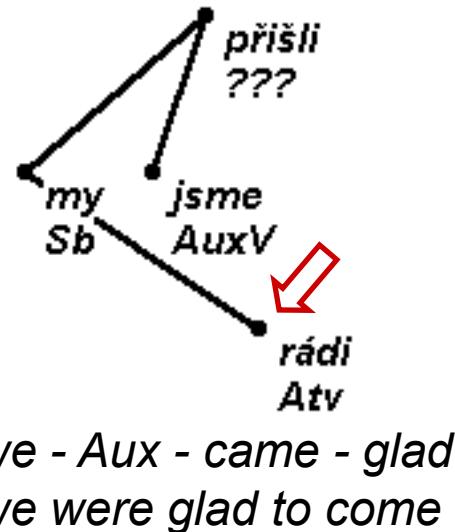

**Complement** (verbal attribute) ... analytical functions: **Atv, AtvV**

- modifies two sentence members, verb and noun

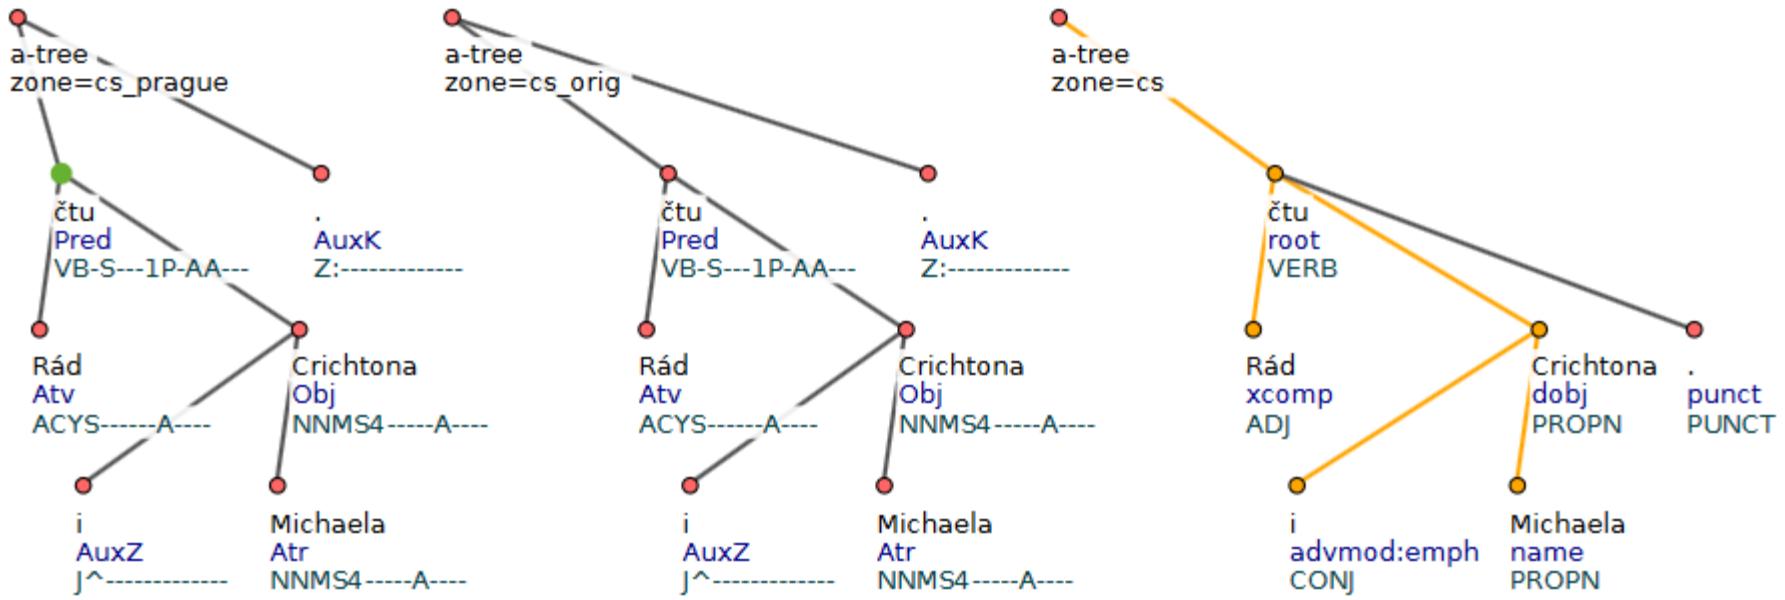

*chlápec ležel nemocen, viděl ho nemocného*

[boy – lay – ill]

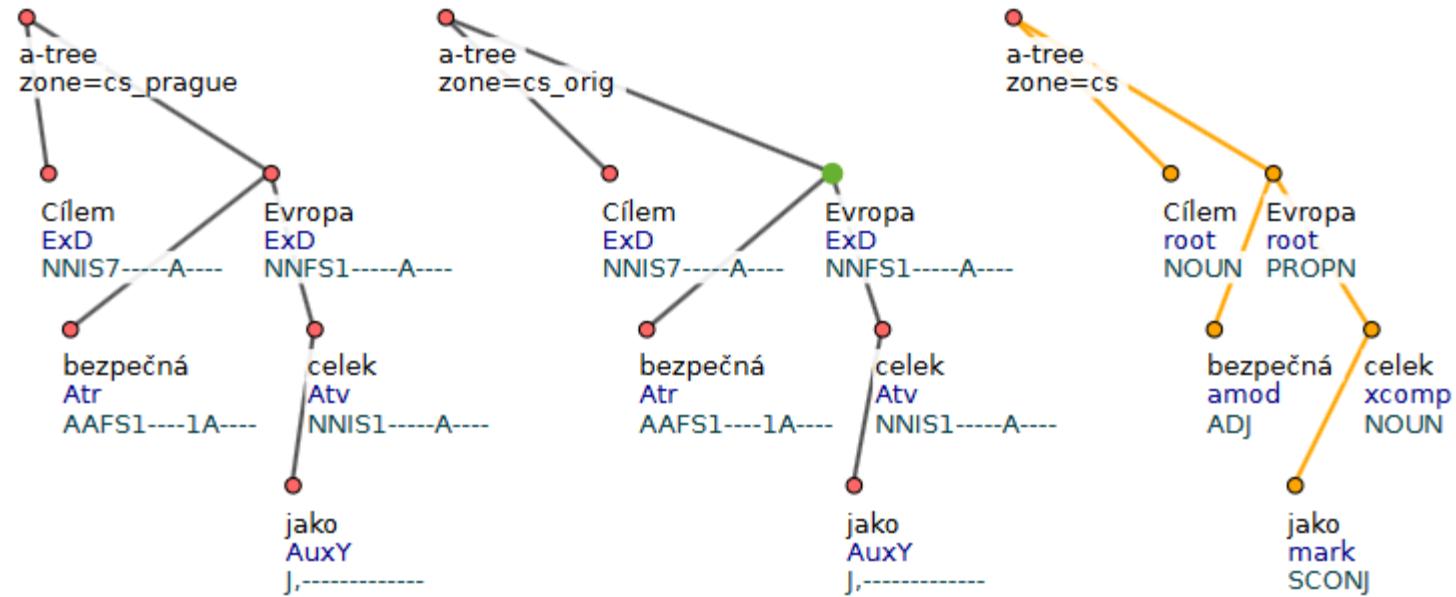

[he – saw – him – (being) ill]

# "Doplňěk" in HamleDT for Czech (PDT vs. UDs, version 1)

# "Doplněk" in HamleDT for Czech (PDT vs. UDs, version 1)

# Complex sentences

- **main clause** (= independent clause) vs. **non-main clause**
- **relative clause** ... syntactic function: Atribute

*The Ferrari [which I can't afford \_ ].*

*I imagined the house where I want to live.*

- starting with a relative pronoun or relative adverb

- **dependent clause** ... either modify the main clause of a sentence or serve as a component of it (plus recursivity!!)

... syntactic function: Object or Adverbial

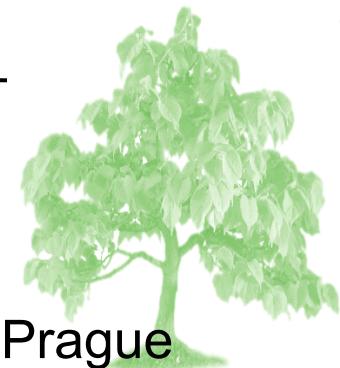

- starting with a subordinating conjunction (that, if, whether, in order that)

*I know (that) he is here.*

- starting with an interrogative pronoun or relative adverb

*I know who said that.*

*I know where he wanted to go.*
