Faculty of Mathematics and Physics,
Institute of Formal and Applied Linguistics

Programming questions

- **Feature frequency**

- Implement a function that receives a vector of 1s and 0s and returns the number of 1s.

- **MOV data set**

- Run this script
`https://ufal.mff.cuni.cz/~hladka/2015/docs/load-mov-data.R`
- Work with `movies` data frame. For each genre-related feature compute its feature frequency. Plot all the feature frequency values.

Programming questions

- **USArrests data set**

- `d <- USArrests`
- Print a vector of the state names from the highest Assault rate to the lowest Assault rate.
- Produce a scatter plot of Rape and Murder.
- Compute Pearson correlation coefficient for Murder and Rape, Rape and UrbanPop, Murder and UrbanPop.
- Run K-Means clustering algorithm for $K=3$ and experiment with Assault and Rape
- Run K-Means clustering algorithm for $K=3$ and experiment with all the four features.
- Use the Elbow Method to find an optimal value of K

- **Titanic data set**

- `d <-
read.csv("https://ufal.mff.cuni.cz/hladka/2021/docs/train.csv")`
