## 1 Constituents vs. Dependencies

## 2 Universal Dependencies

- A Tour through UD Syntax
- Nonverbal Predicate and Copula
- Core Arguments vs. Oblique Dependents
- Ellipsis and Enhanced UD

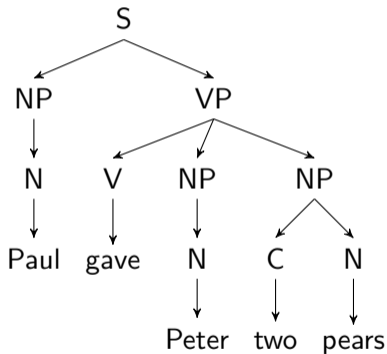

## Constituents vs. Dependencies

- Different shapes in different theories
- Typically a tree
  - Constituents (phrase tree structure)
  - Dependencies (dependency tree structure)

# Constituent Tree

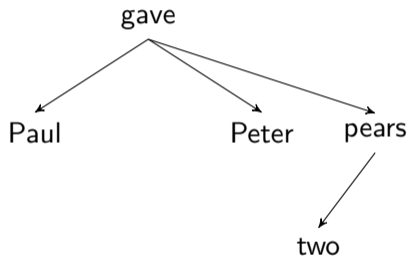

(S (NP (N Paul)) (VP (V gave) (NP (N Peter)) (NP (C two) (N pears))))

## Dependency Tree

[gave,2] ( [Paul,1], [Peter,3], [pears,5] ( [two,4] ) )

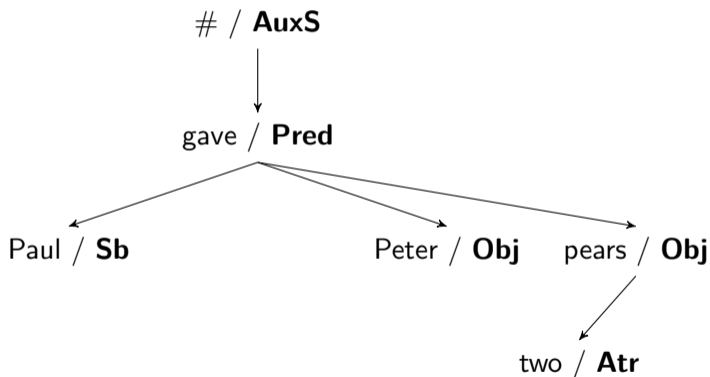

*Paul gave Peter two pears.*

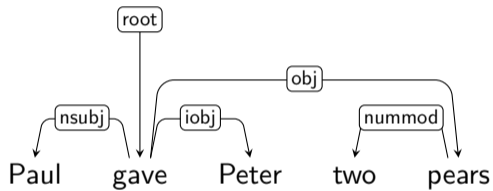

## Dependency Tree with Labels

[#,0] ([gave,2] ([Paul,1], [Peter,3], [pears,5] ([two,4])), [.,6])

# Dependency Tree with Labels

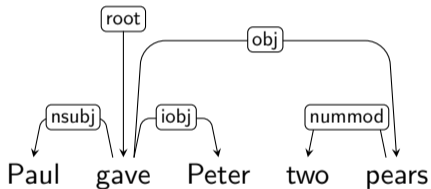

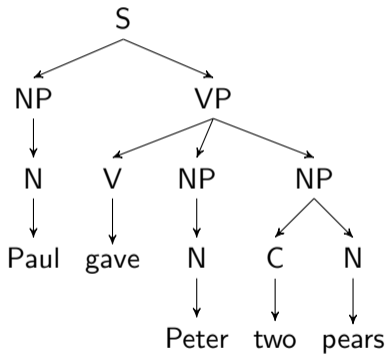

# Constituents vs. Dependencies

- The two models are interconnected
- Sentence divided to **phrases** (constituents)
  - Recursive: phrases divided to smaller phrases
  - The smallest phrases are words
- There are **dependencies** (relations) between words (constituents)
  - **Head** of phrase = governing node, parent node
  - The other nodes are dependent nodes, children of the head

# Phrase vs. Dependency Trees

# Phrase vs. Dependency Trees

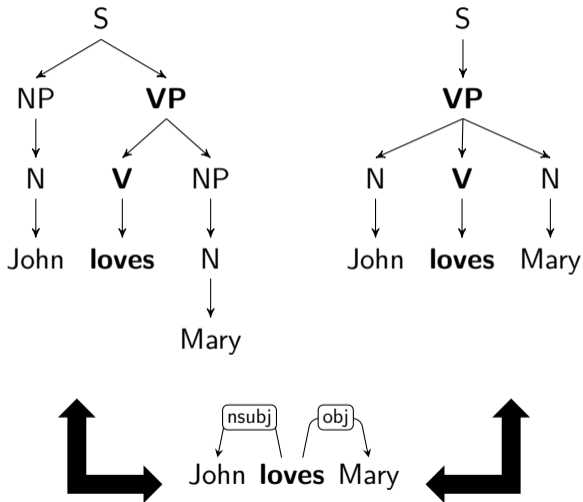

- Phrase trees
  - Usually do not mark the **head**
  - May not mark the **function** of the constituent in the superordinate constituent

# Phrase vs. Dependency Trees

- Phrase trees
  - Usually do not mark the **head**
  - May not mark the **function** of the constituent in the superordinate constituent
- Dependency trees
  - Do not show **nonterminals** (phrase types)
    - Nor any other phrase-level features
  - Do not show “how the sentence is generated” (order, recursion, **proximity** of constituents)

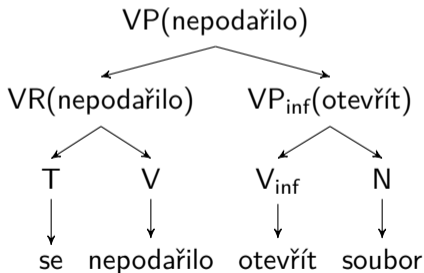

## Example

# Discontinuous Phrases

- Classical context-free grammar cannot describe them!
- They cannot be represented by bracketing.
-  English example: *I found the **best** example **ever**.*
-  Czech example: (***Soubor** (se nepodařilo) **otevřít***). “File couldn’t be opened.”

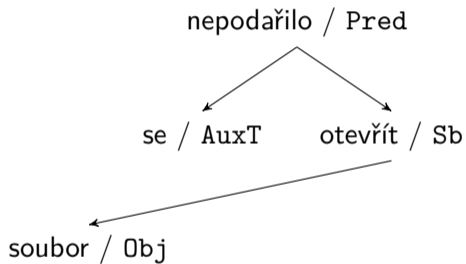

# Nonprojectivity

- Dependency tree including word order (x-coordinate of nodes).
- Projection to the base: the vertical from the node crosses a dependency (**nonprojective edge**).
- Formally:
  - Dependency  $([g, x_g], [d, x_d])$  where  $x_w$  is the order of the word  $w$  in the sentence.
  - There exists a node  $[n, x_n]$  that  $x_g < x_n < x_d$  or  $x_d < x_n < x_g$  and  $[n, x_n]$  is not in subtree rooted by  $[g, x_g]$ .
- Informally: The string spanned by the subtree of the governing node is discontinuous, it contains **gaps**.

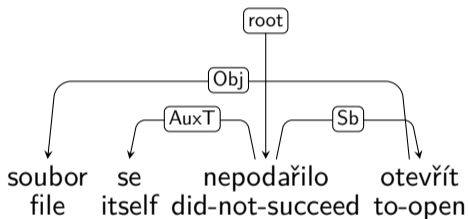

# Nonprojectivity Can Be Handled by a Dependency Tree!

# Nonprojectivity Can Be Handled by a Dependency Tree!

## Milestones:

- 2008-05 InterSet (morphological features)
- 2012-05 Google Universal POS tags
- 2012-05 HamleDT (harmonized Prague-style treebanks)
- 2013-08 Google Universal Dependency Treebank
- 2014-05 Universal Stanford Dependencies
- 2014-04 EACL Göteborg, **kick-off meeting of UD**
- 2014-10 UD guidelines version 1
- 2015-01 released first 10 treebanks
- every ~6 months new release
- 2016-12 **UD guidelines version 2**
- 2017-05 CoNLL Shared Task in parsing UD
- 2018-06 second Shared Task
- every ~6 months new release

# Universal Dependencies

- Same things annotated same way across languages...
- ... while highlighting different **coding strategies**

# Manning's Law

*The secret to understanding UD is to realize that the design is a very subtle compromise between approximately 6 things:*

- ① UD must be satisfactory on linguistic analysis grounds for **individual languages**.

*It's easy to come up with a proposal that improves UD on one of these dimensions. The interesting and difficult part is to improve UD while remaining sensitive to all these dimensions.*

# Manning's Law

*The secret to understanding UD is to realize that the design is a very subtle compromise between approximately 6 things:*

- ① UD must be satisfactory on linguistic analysis grounds for **individual languages**.
- ② UD must be good for linguistic **typology**, i.e., providing a suitable basis for bringing out cross-linguistic parallelism across languages and language families.

*It's easy to come up with a proposal that improves UD on one of these dimensions. The interesting and difficult part is to improve UD while remaining sensitive to all these dimensions.*

# Manning's Law

*The secret to understanding UD is to realize that the design is a very subtle compromise between approximately 6 things:*

- 1 UD must be satisfactory on linguistic analysis grounds for **individual languages**.
- 2 UD must be good for linguistic **typology**, i.e., providing a suitable basis for bringing out cross-linguistic parallelism across languages and language families.
- 3 UD must be suitable for **rapid, consistent annotation** by a human annotator.

*It's easy to come up with a proposal that improves UD on one of these dimensions. The interesting and difficult part is to improve UD while remaining sensitive to all these dimensions.*

# Manning's Law

**Universal Dependencies**  
A Tour through UD Syntax

## 1 Constituents vs. Dependencies

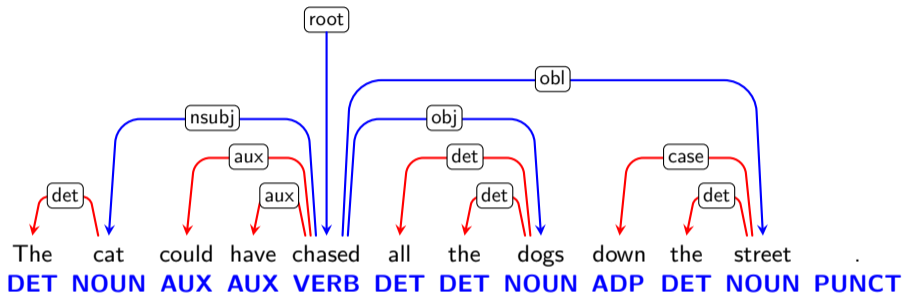

## 2 Universal Dependencies

- A Tour through UD Syntax
- Nonverbal Predicate and Copula
- Core Arguments vs. Oblique Dependents
- Ellipsis and Enhanced UD

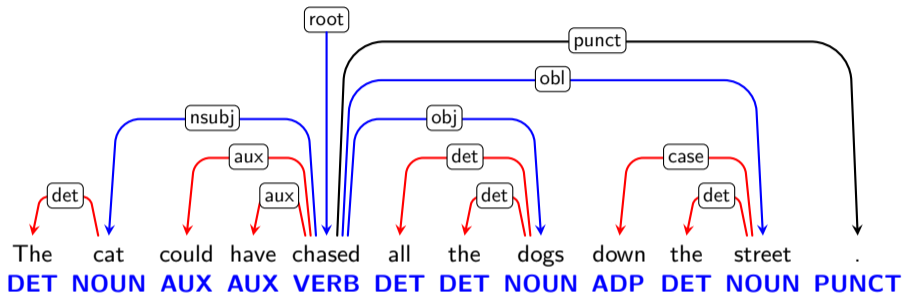

The cat could have chased all the dogs down the street .  
DET NOUN AUX AUX VERB DET DET NOUN ADP DET NOUN PUNCT

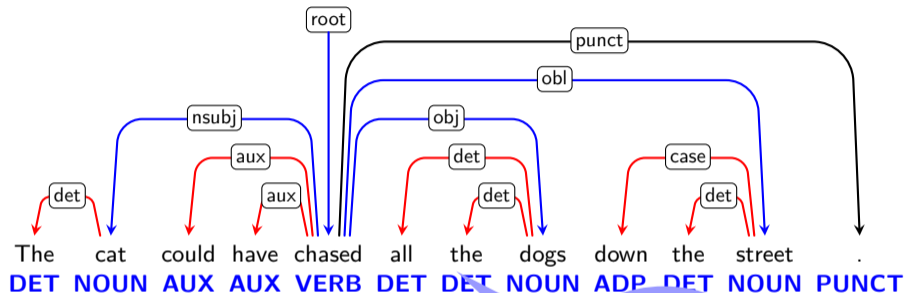

- Content words are related by dependency relations

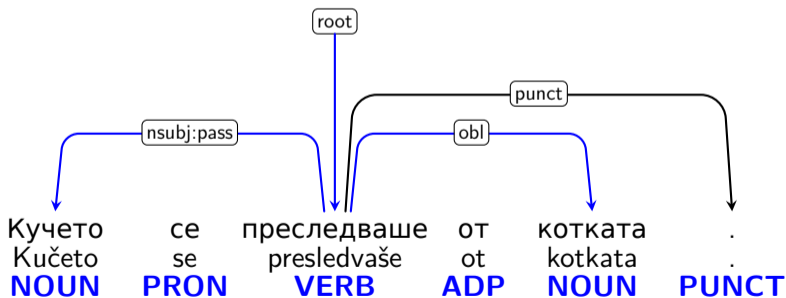

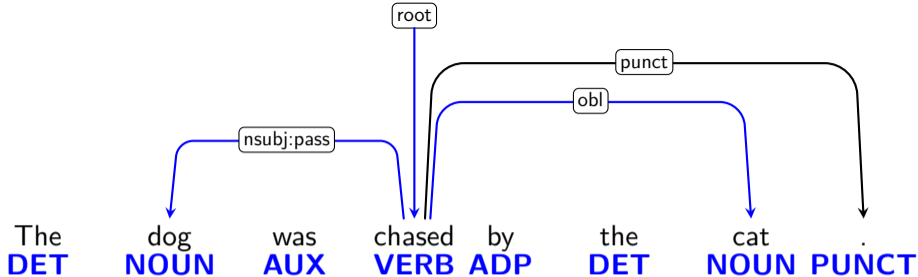

- Content words are related by dependency relations
- Function words attach to closest content words

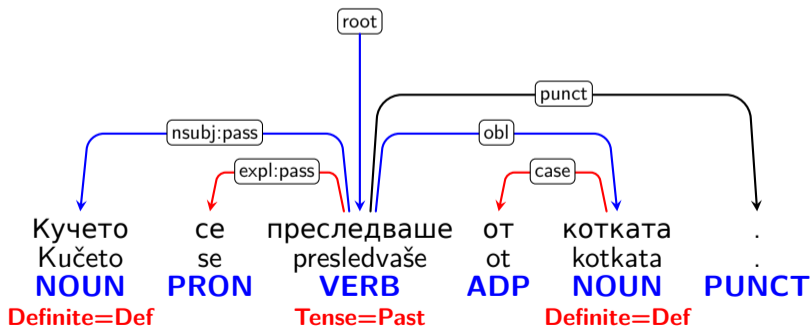

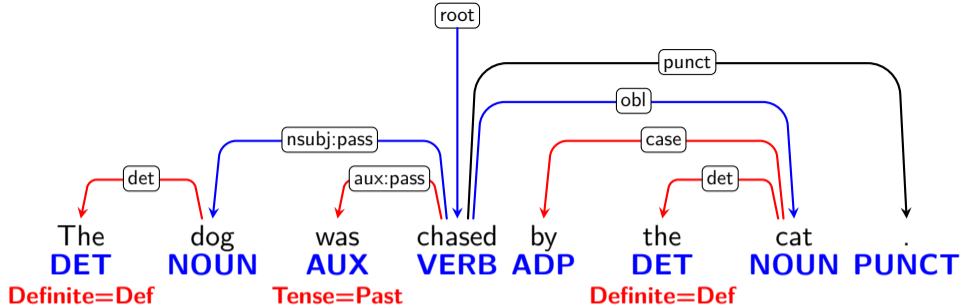

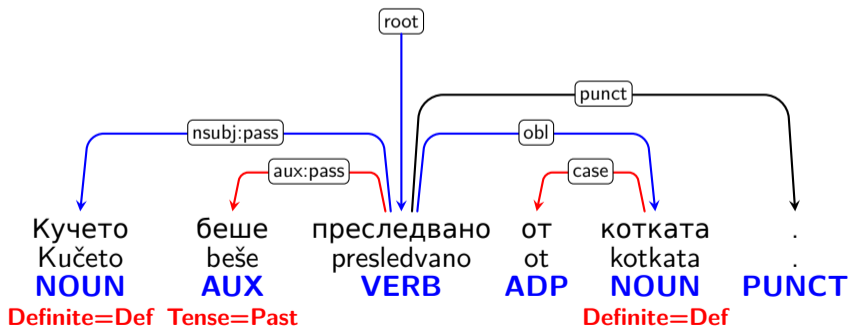

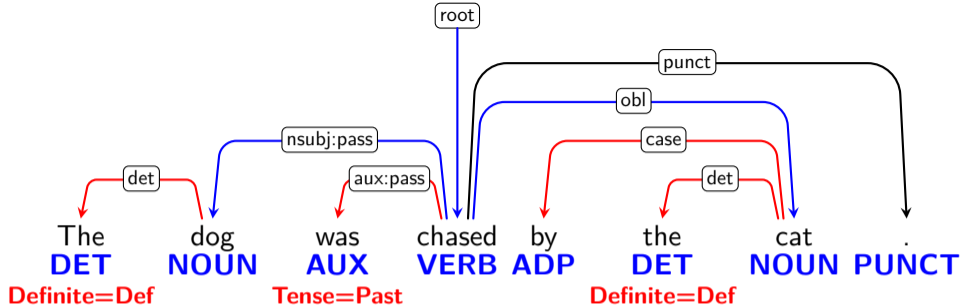

- Content words are related by dependency relations
- Function words attach to closest content words
- Punctuation attach to head of phrase or clause

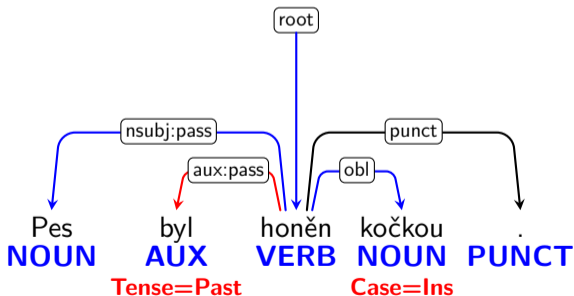

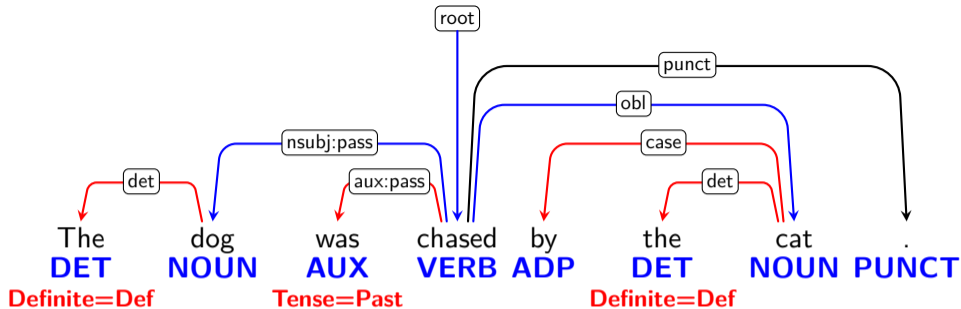

Not  
"dependency"  
in the strictly  
syntactic  
sense!

## Dependents of Clauses (Verbal or Not)

	Nominal	Clausal	Modifier	Function
Core	nsubj	csubj		
Non-Core	obl vocative dislocated expl	advcl	advmod discourse	aux cop mark

## Dependents of Verbs, Adjectives and Adverbs

	Nominal	Clausal	Modifier
Core	obj iobj	ccomp xcomp	
Non-Core	obl expl	advcl	advmod

## Dependents of Nominals

Nominal	Clausal	Modifier	Function
nmod appos	acl	amod nummod	det case

# Noun Phrase

## Dependents of Nominals

### Nominal

nmod

appos

compound

flat

### Clausal

acl

### Modifier

amod

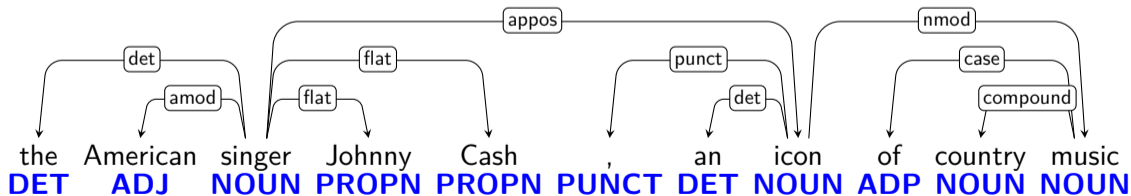

nummod

### Function

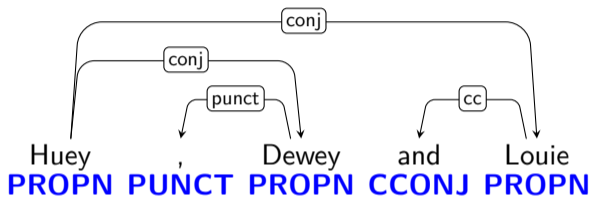

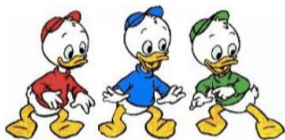

det

case

clf

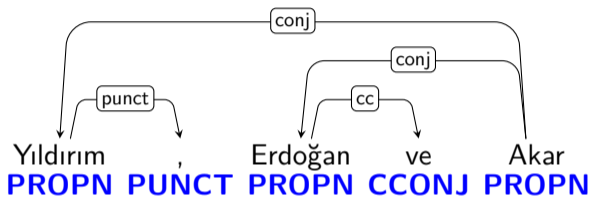

# Coordination

- Coordinate structures are headed by the first conjunct
  - Subsequent conjuncts depend on it via the **conj** relation
  - Conjunctions depend on the next conjunct via the **cc** relation
  - Punctuation marks depend on the next conjunct via the **punct** relation

## But Some Languages Might Prefer the Opposite

- Coordinate structures would be headed by the last conjunct
  - Preceding conjuncts would depend on it via the **conj** relation
  - Conjunctions would depend on the preceding conjunct
  - Punctuation marks would depend on the preceding conjunct

## Multiword Expressions

<b><i>Relation</i></b>	<b><i>Examples</i></b>
<i>fixed</i>	<i>in spite of, as well as, ad hoc</i>
<i>flat</i>	<i>president Havel, New York, four thousand</i>
<i>compound</i>	<i>phone book, dress up</i>
<i>goeswith</i>	<i>notwith standing, with out</i>

- UD annotation **almost** does not permit “words with spaces”
  - Multiword expressions are analyzed using special relations
  - The **fixed**, **flat** and **goeswith** relations are always head-initial
  - The **compound** relation reflects the internal structure
- Words with spaces may be allowed in v2:
  - Vietnamese (spaces delimit syllables, not words)
  - Numbers (“1 000 000”)
  - Possibly other approved cases, e.g. multi-word abbreviations

## Other Relations

<b><i>Relation</i></b>	<b><i>Explanation</i></b>
<i>parataxis</i>	<i>Loosely linked clauses of same rank</i>
<i>list</i>	<i>Lists without syntactic structure</i>
<i>orphan</i>	<i>Orphans in ellipsis linked together</i>
<i>reparandum</i>	<i>Disfluency linked to (speech) repair</i>
<i>foreign</i>	<i>Elements within opaque stretches of code switching</i>
<i>dep</i>	<i>Unspecified dependency</i>
<i>root</i>	<i>Syntactically independent element of clause/phrase</i>

# Language-specific Relation Subtypes

- Language-specific relations are **subtypes** of universal relations added to capture important phenomena
- Subtyping permits us to “back off” to universal relations

## Language-specific Relation Subtypes

Relation	Explanation
acl:relcl	Relative clause
compound:prt	Verb particle (dress <b>up</b> )
nmod:poss	Possessive nominal ( <b>Mary</b> 's book)
obl:agent	Agent in passive (saved <b>by the bell</b> )
cc:preconj	Preconjunction ( <b>both</b> ... and)
det:predet	Predeterminer ( <b>all</b> those ...)

**Universal Dependencies**

Nonverbal Predicate and Copula

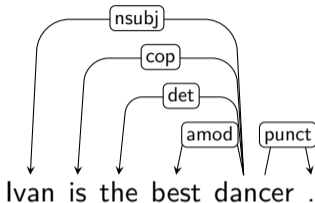

## 1 Constituents vs. Dependencies

## 2 Universal Dependencies

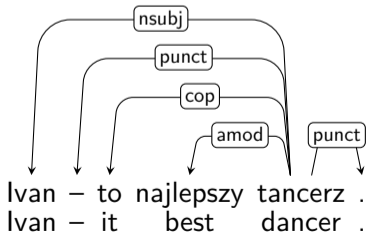

- A Tour through UD Syntax
- Nonverbal Predicate and Copula
- Core Arguments vs. Oblique Dependents
- Ellipsis and Enhanced UD

# Nonverbal Predicate and Copula

- 🇬🇧 Some languages use a copula verb:

- 🇵🇱 Some languages use a copula **pronoun**:

# Nonverbal Predicate and Copula

- Some languages use a copula verb:

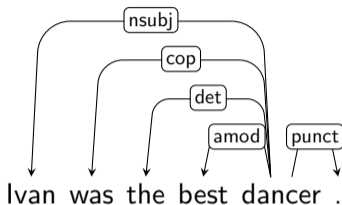

- Some languages **omit the copula**:

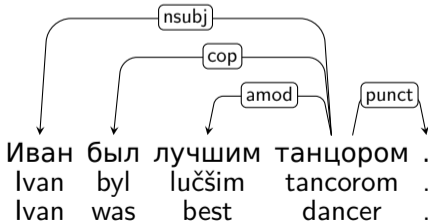

# Nonverbal Predicate and Copula

- 🇬🇧 Some languages use a copula verb:

- 🇷🇺 Some languages use it **only in some tenses**:

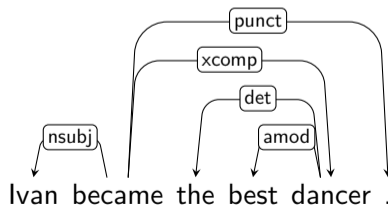

# Copula Verbs: We Are Restrictive!

- 🇬🇧 *To be* is copula:

- 🇬🇧 *To become* is not copula:

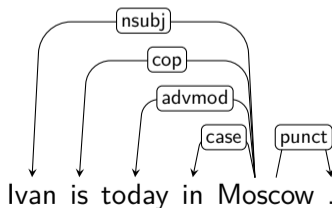

# Once Copula, Always Copula!

-  This is parallel with Russian:

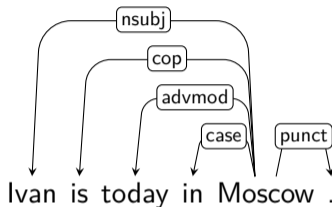

-  This is also parallel with Russian:

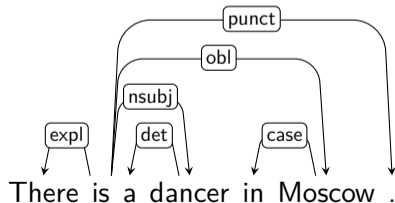

# Well, Almost...

- 🇬🇧 This is parallel with Russian:

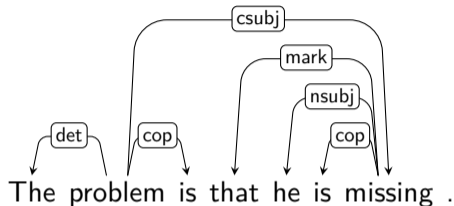

- 🇬🇧 But not with this in English:

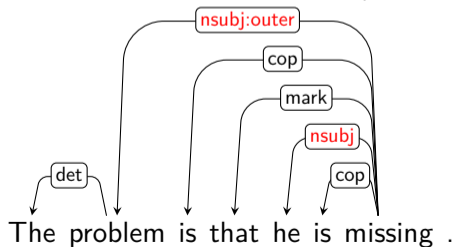

# Clauses and Copula

-  A clause can be the subject:

-  Or it can be annotated as the nonverbal predicate (note the two subjects):

## **Universal Dependencies**

# UD is NOT about Semantic Roles!

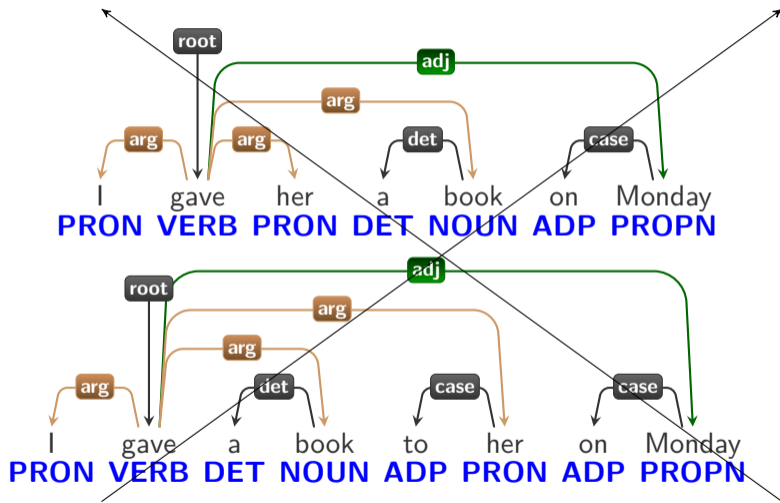

# Manning's Law – What If We Do Semantic Roles?

*The secret to understanding the design and current success of UD is to realize that the design is a very subtle compromise between approximately 6 things:*

- 1 UD must be satisfactory on linguistic analysis grounds for **individual languages**.
- 2 UD must be good for linguistic **typology**, i.e., providing a suitable basis for bringing out cross-linguistic parallelism across languages and language families.
- 3 UD must be suitable for **rapid, consistent annotation** by a human annotator.
- 4 UD must be easily comprehended and used by a **non-linguist**, whether a language learner or an engineer with prosaic needs for language processing. ... it leads us to favor traditional grammar notions and terminology.
- 5 UD must be suitable for **computer parsing** with high accuracy.
- 6 UD must support well **downstream language understanding tasks** (relation extraction, reading comprehension, machine translation, ...)

*It's easy to come up with a proposal that improves UD on one of these dimensions. The interesting and difficult part is to improve UD while remaining sensitive to all these dimensions.*

# UD Avoids Argument-Adjunct Distinction!

# Avoiding an Argument-Adjunct Distinction

- From the guidelines:
  - Subtle, unclear, and frequently argued over
  - Questionable as a categorical distinction
  - Best practical solution is to eliminate it

# Avoiding an Argument-Adjunct Distinction

- From the guidelines:
  - Subtle, unclear, and frequently argued over
  - Questionable as a categorical distinction
  - Best practical solution is to eliminate it
- BUT:
  - Cannot be eliminated completely
  - Some people/data have it and want to keep it
    - It aligns well with traditional grammars
  - $\Rightarrow$  there is now a relation subtype `obl:arg`

# Avoiding an Argument-Adjunct Distinction

- From the guidelines:
  - Subtle, unclear, and frequently argued over
  - Questionable as a categorical distinction
  - Best practical solution is to eliminate it
- BUT:
  - Cannot be eliminated completely
  - Some people/data have it and want to keep it
    - It aligns well with traditional grammars
  - $\Rightarrow$  there is now a relation subtype `obl:arg`
- **AND** I will argue that
  - Core-oblique distinction is unclear and argued over too
  - (Though I will **not** propose to discard it.)

# So What Is Core and Why?

THE CORE

# Community Confusion

- UD v1 guidelines took core-oblique for granted
- English (simplified):
  - Bare noun phrase  $\Rightarrow$  core argument (nsubj, obj, iobj)
  - Prepositional phrase  $\Rightarrow$  oblique argument or adjunct (obl)

- UD v1 guidelines took core-oblique for granted
- English (simplified):
  - Bare noun phrase  $\Rightarrow$  core argument (nsubj, obj, iobj)
  - Prepositional phrase  $\Rightarrow$  oblique argument or adjunct (obl)
- Other languages: not necessarily! (Spanish, Japanese)
  - But some people simply took the English rule...
  - Manning's law: non-linguists!

# Community Confusion

- UD v1 guidelines took core-oblique for granted
- English (simplified):
  - Bare noun phrase  $\Rightarrow$  core argument (nsubj, obj, iobj)
  - Prepositional phrase  $\Rightarrow$  oblique argument or adjunct (obl)
- Other languages: not necessarily! (Spanish, Japanese)
  - But some people simply took the English rule...
  - Manning's law: non-linguists!
- Clash with traditional terminology
  - Grammars of German, Czech etc. define **prepositional objects**
  - But these are not necessarily core...
  - Yet some people took their national definition of object...

# Language-specific Coding Strategy

- Idea:
  - **Oblique** arguments are marked **similarly to adjuncts** (prepositions, certain morphological cases...)
  - Core arguments are marked differently
    - $\Rightarrow$  easy for annotators and non-linguists!
- Why are core arguments special?
  - They tend to be **targeted by grammatical rules**
    - Passivization
    - Control verbs
    - Reflexives
    - ...

# Language-specific Coding Strategy

- Core vs. oblique is not defined in traditional grammar
- How shall we define it?

# Language-specific Coding Strategy

- Core vs. oblique is not defined in traditional grammar
- How shall we define it?
- Andrews, 2007 (In Shopen: Language Typology)
  - Identify **primary transitive predicates**
    - We need semantic roles for this! (One-time only.)

# Language-specific Coding Strategy

- Core vs. oblique is not defined in traditional grammar
- How shall we define it?
- Andrews, 2007 (In Shopen: Language Typology)
  - Identify **primary transitive predicates**
    - We need semantic roles for this! (One-time only.)
  - Actor/agent = function **A**
  - Undergoer/patient = function **P**

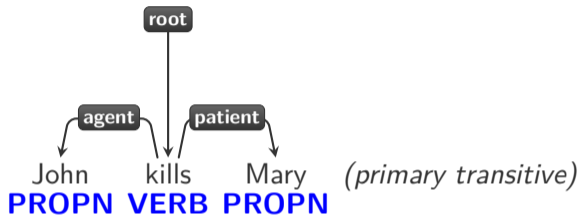

# Language-specific Coding Strategy

- Core vs. oblique is not defined in traditional grammar
- How shall we define it?
- Andrews, 2007 (In Shopen: Language Typology)
  - Identify **primary transitive predicates**
    - We need semantic roles for this! (One-time only.)
  - Actor/agent = function **A**
  - Undergoer/patient = function **P**
  - Note the way they are coded
  - Note other grammatical rules that target them
  - Generalize to other predicates with same coding and rules

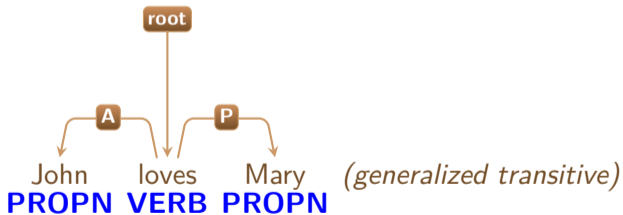

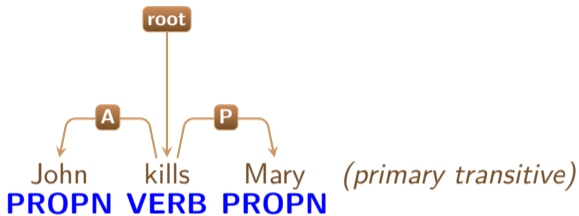

# Language-specific Coding Strategy

- Core vs. oblique is not defined in traditional grammar
- How shall we define it?
- Andrews, 2007 (In Shopen: Language Typology)
  - Identify **primary transitive predicates**
    - We need semantic roles for this! (One-time only.)
  - Actor/agent = function **A**
  - Undergoer/patient = function **P**
  - Note the way they are coded
  - Note other grammatical rules that target them
  - Generalize to other predicates with same coding and rules
- Then define:
  - function A  $\Rightarrow$  **nsubj**
  - function P  $\Rightarrow$  **obj**

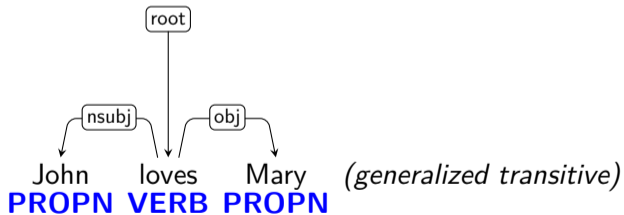

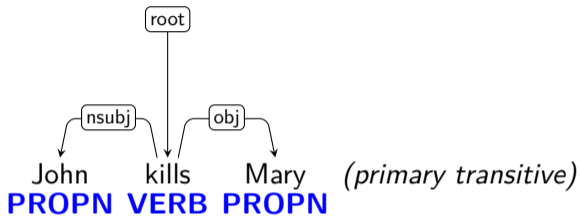

# Transitive Predicates in English

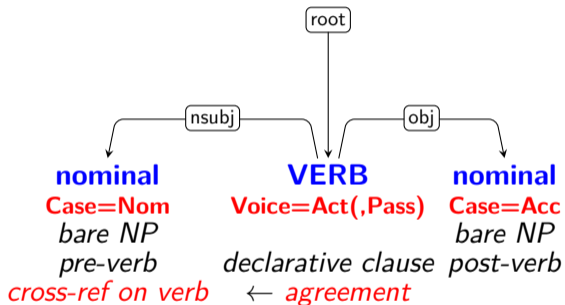

# Transitive Predicates in English

# Transitive Predicates in English

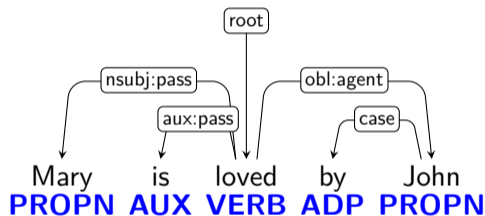

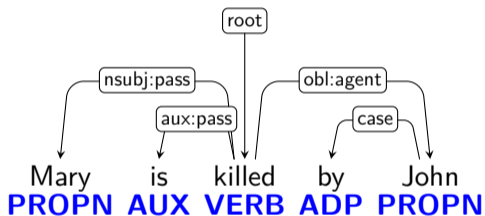

# Transitive Predicates in English

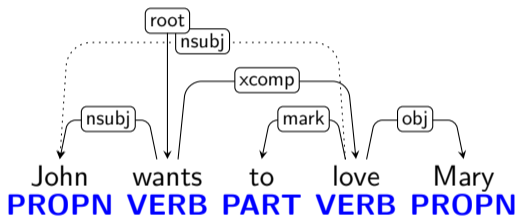

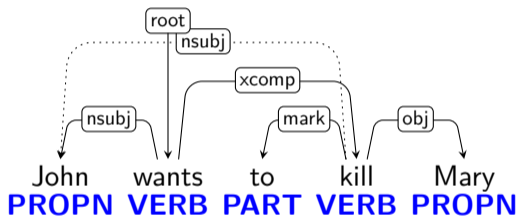

# Passivization in English

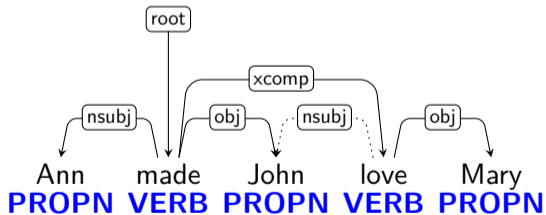

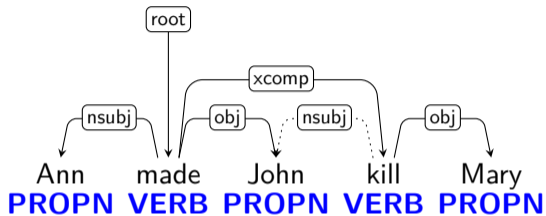

# Subject Control in English

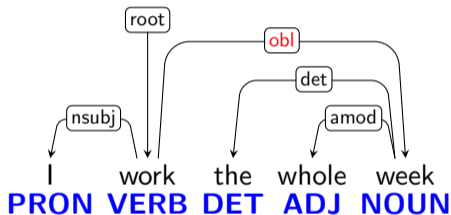

# Object Control in English

## Some Problems

- Some temporal adjuncts are bare noun phrases
  - I work the whole week.*
  - I work every Friday.*

- At least it cannot passivize:
  - \*The whole week is worked by me.*
  - \*Every Friday is worked by me.*
- But...

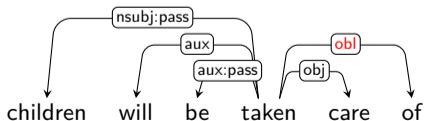

## Some Problems

- Some transitive verbs cannot passivize
  - *John **has** a new car.*
    - *\*A new car is had by John.*
  - *Friday does not **suit** me.*
    - *\*I am not suited by Friday.*

## Some Problems

- Some transitive verbs cannot passivize
  - John *has* a new car.
    - \*A new car is had by John.
  - Friday does not *suit* me.
    - \*I am not suited by Friday.
- Some prepositional verbs can passivize
  - You can *rely* on Ben.
    - Ben can be relied on.
  - They will *take* care of your children.
    - Your children will be taken care of.

# Tentative Summary?

- The borderline is inherently fuzzy
- No universally applicable and exact algorithm
- Better described in terms of probability

# Tentative Summary?

- The borderline is inherently fuzzy
- No universally applicable and exact algorithm
- Better described in terms of probability
- Core coding **not favored by adjuncts**
- Oblique coding **similar to most adjuncts**
- Passivization etc. may help...
- ... but does **not** work as **strict criterion**

# Tentative Summary?

- The borderline is inherently fuzzy
- No universally applicable and exact algorithm
- Better described in terms of probability
- Core coding **not favored by adjuncts**
- Oblique coding **similar to most adjuncts**
- Passivization etc. may help...
- ... but does **not** work as **strict criterion**
- Semantic roles needed when starting a new language
- Argument-adjunct needed to describe exceptions (*the whole week*)

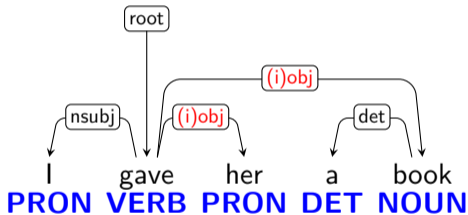

# Intransitive Predicates

- Just one core argument
  - We already “know” how to find out if there are two
- $\Rightarrow$  function **S**
  - Regardless of semantic role:
    - *John runs.*
    - *John sleeps.*
    - *John falls.*
- Then define:
  - function **S**  $\Rightarrow$  **nsubj**

# Ditransitive Predicates

- Three core arguments
- Is one of them “least core”?  $\Rightarrow$  **iobj**
- (Alternatively, we could look at the semantic roles once again.)

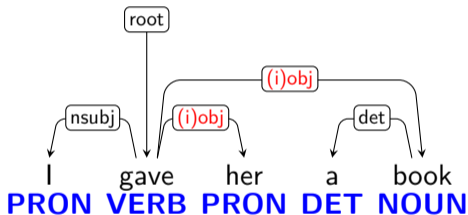

- Passivization:
  - *She was given a book by me.*
  - *?A book was given her by me.*

# Ditransitive Predicates

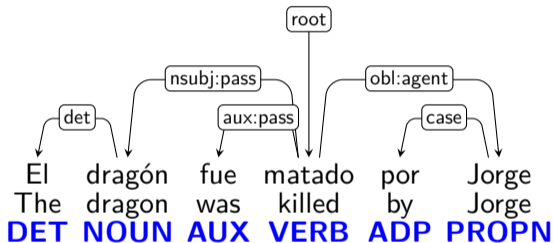

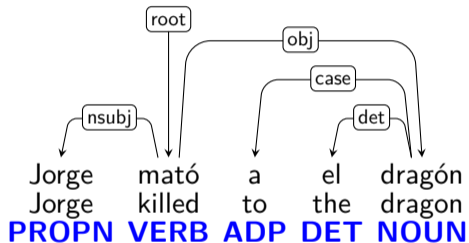

- Three core arguments
- Is one of them “least core”?  $\Rightarrow$  **iobj**
- (Alternatively, we could look at the semantic roles once again.)

- Andrews (2007): *the status of the notion of ‘indirect object’ is problematic and difficult to sort out. The top priority is to work out what properties recipients and themes do and do not share with P arguments of primary transitive verbs.*

# Monotransitive with Preposition?

## Tentative Summary 2

- There is a core-oblique scale:
- **Nom** > **Acc** > **Gen,Dat** > **Ins** > **preposition**
- Where is the borderline?

## Tentative Summary 2

- There is a core-oblique scale:
- **Nom** > **Acc** > **Gen,Dat** > **Ins** > **preposition**
- Where is the borderline?
- UD Czech 1.0: object = argument
  - **Nom, Acc, Gen, Dat, Ins, ADP** > “adverbial”

## Tentative Summary 2

- There is a core-oblique scale:
- **Nom** > **Acc** > **Gen,Dat** > **Ins** > **preposition**
- Where is the borderline?
- UD Czech 1.0: object = argument
  - **Nom, Acc, Gen, Dat, Ins, ADP** > “adverbial”
- UD Czech 2.1–2.5: bare NP > PP
  - **Nom, Acc, Gen, Dat, Ins** > **ADP** + adjuncts

## Tentative Summary 2

- There is a core-oblique scale:
- **Nom** > **Acc** > **Gen,Dat** > **Ins** > **preposition**
- Where is the borderline?
- UD Czech 1.0: object = argument
  - **Nom, Acc, Gen, Dat, Ins, ADP** > “adverbial”
- UD Czech 2.1–2.5: bare NP > PP
  - **Nom, Acc, Gen, Dat, Ins** > **ADP** + adjuncts
- UD Czech 2.6 (May 2020):
  - **Nom, Acc** > **Gen, Dat, Ins, ADP** + adjuncts

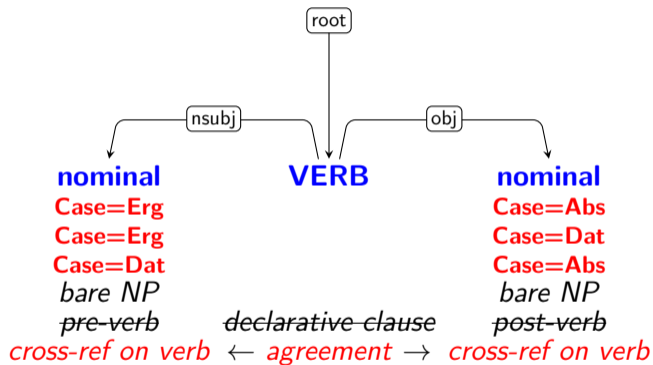

## Tentative Summary 2

- There is a core-oblique scale:
- **Nom** > **Acc** > **Gen,Dat** > **Ins** > **preposition**
- Where is the borderline?
- UD Czech 1.0: object = argument
  - **Nom, Acc, Gen, Dat, Ins, ADP** > “adverbial”
- UD Czech 2.1–2.5: bare NP > PP
  - **Nom, Acc, Gen, Dat, Ins** > **ADP + adjuncts**
- UD Czech 2.6 (May 2020):
  - **Nom, Acc** > **Gen, Dat, Ins, ADP + adjuncts**
  - $\Rightarrow$  No ditransitives in Czech!
  - (Exception: *učit* “to teach” takes two Acc.)

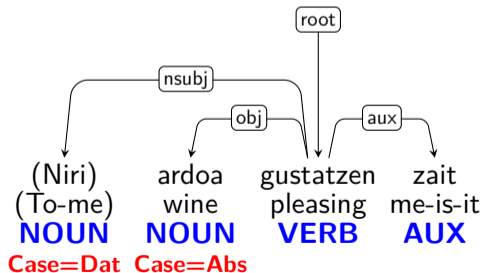

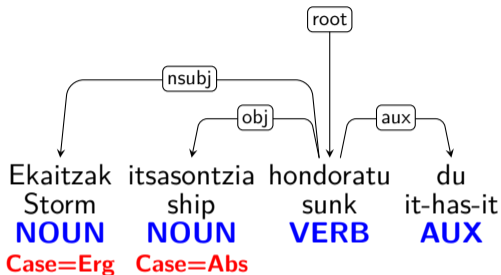

# Basque Transitive Clauses

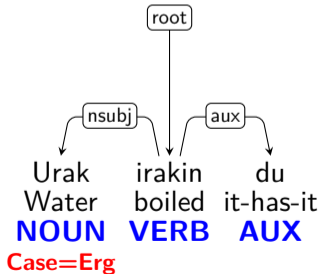

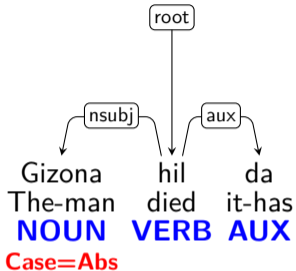

# Basque Transitive Clauses

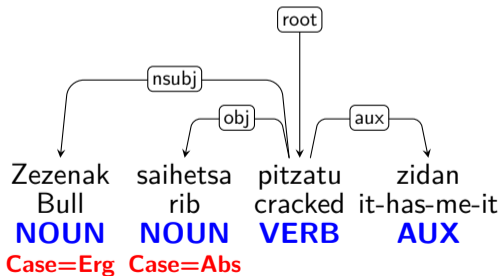

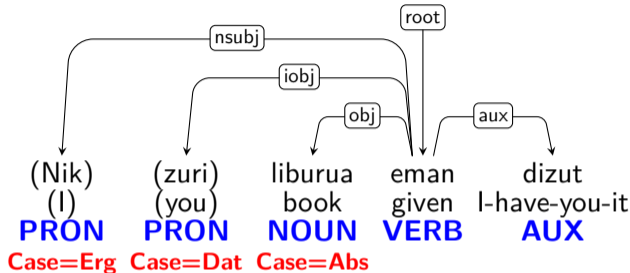

## Basque Intransitive Clauses

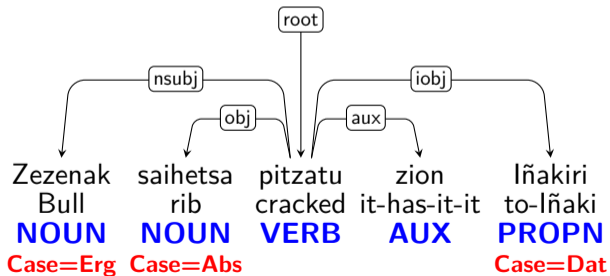

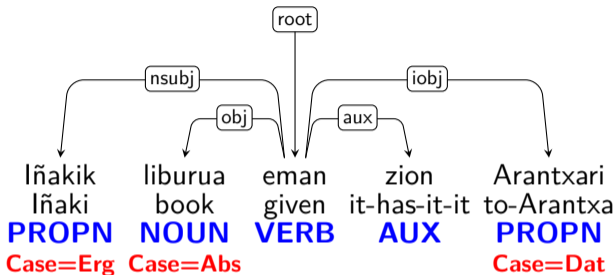

# Basque Ditransitive Clauses

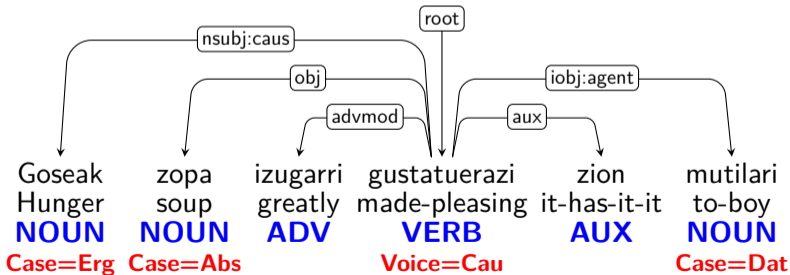

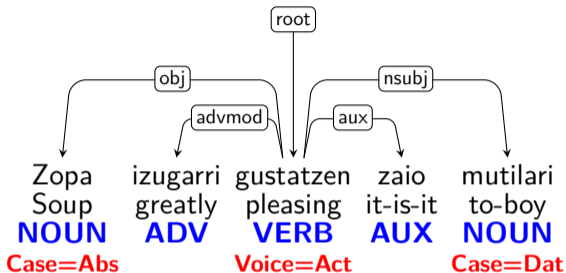

# Basque Ditransitive Clauses

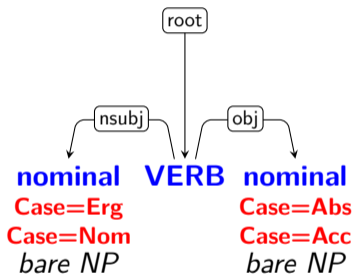

# Basque Causative Applied to Dative Subject

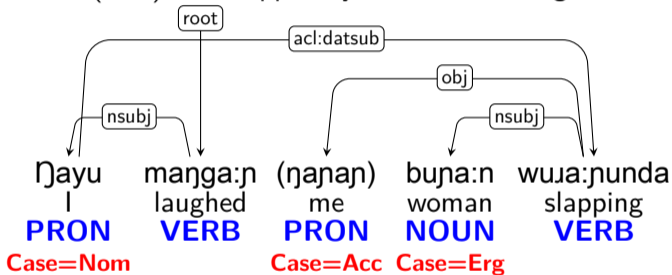

# Yidj Transitive Clauses

# Yidjn “Dative” Adnominal Clauses

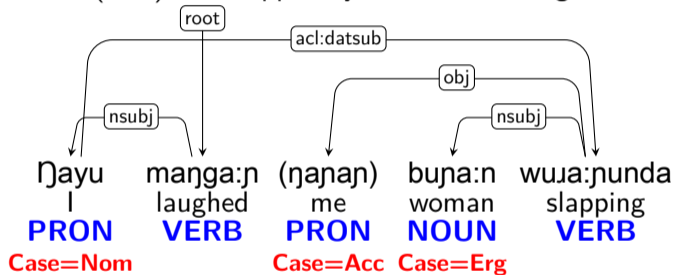

“I, (who) was slapped by the woman, laughed”

## Yidinj “Dative” Adnominal Clauses

“I, (who) was slapped by the woman, laughed”

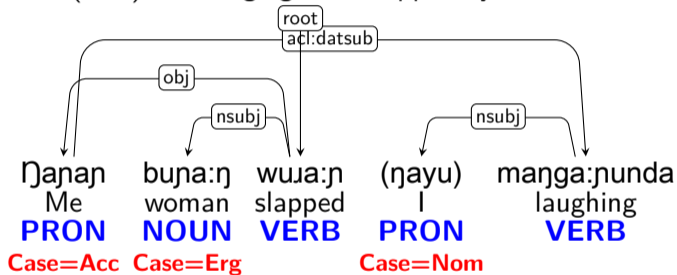

The coreferential (and elidable) NP must have **S** or **P** function.

## Yidjn “Dative” Adnominal Clauses

“I, (who) was laughing, was slapped by the woman”

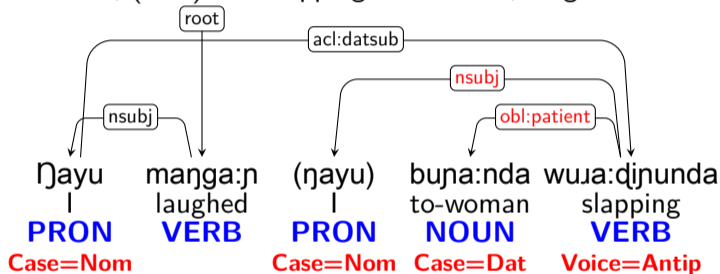

The coreferential (and elidable) NP must have **S** or **P** function.

# Yidjn Antipassive

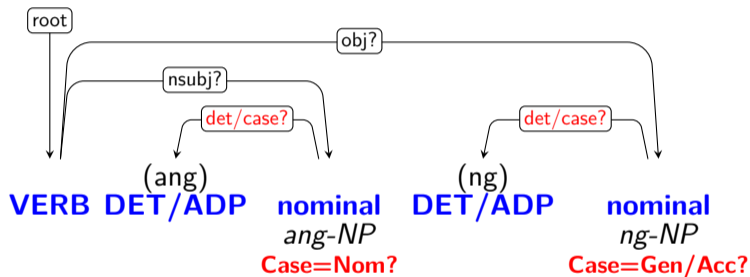

“I, (who) was slapping the woman, laughed”

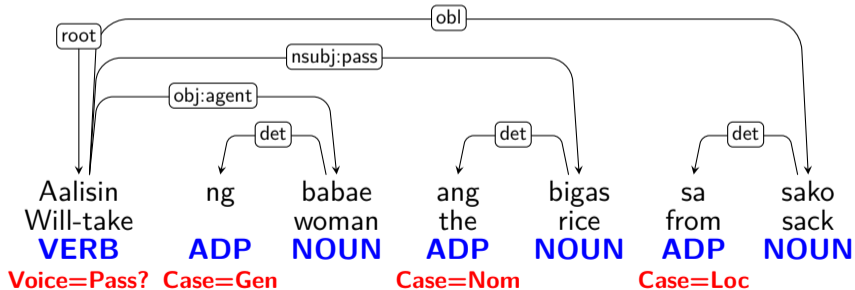

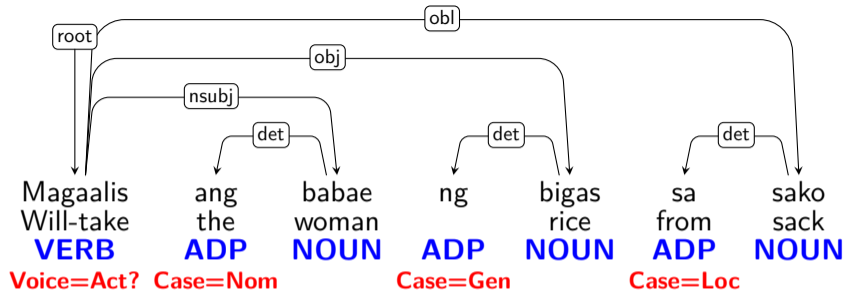

Original P is now oblique and original A is now **S**.

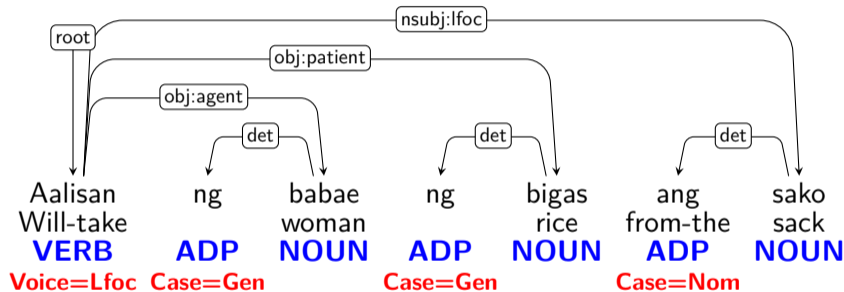

# Tagalog Transitive Clauses

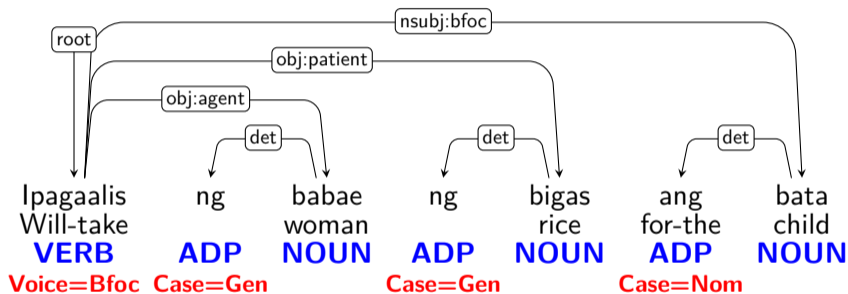

# Tagalog Locative Voice $\Rightarrow$ Ditransitive!

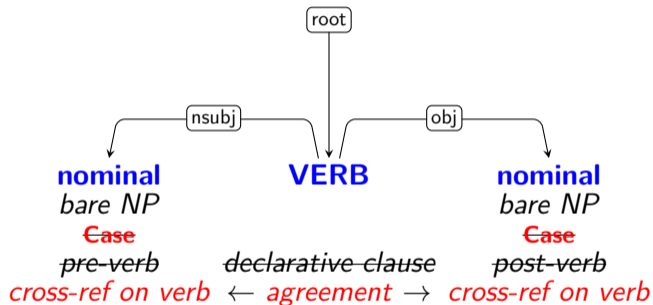

# Tagalog Benefactive Voice $\Rightarrow$ Ditransitive!

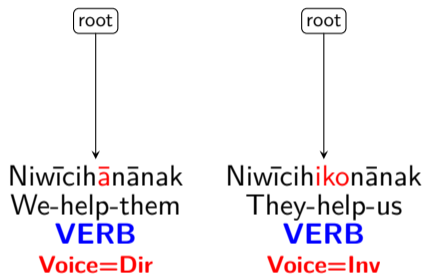

# Plains Cree Transitive Clauses

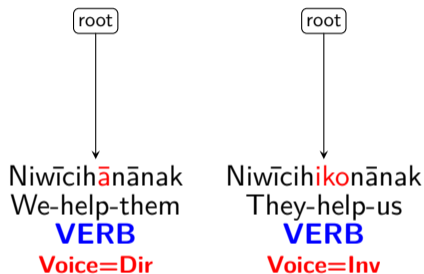

## Direct-Inverse Voice in Plains Cree

Animacy hierarchy: 1st person > 3rd person

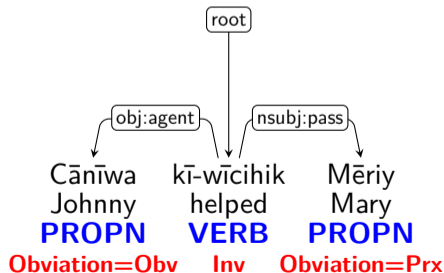

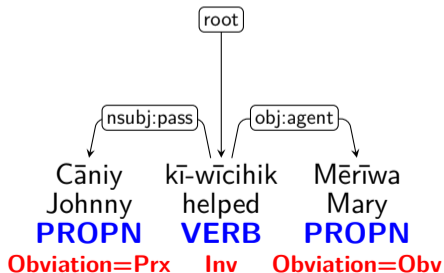

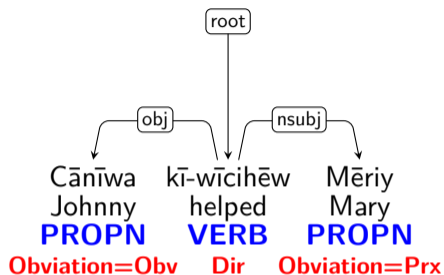

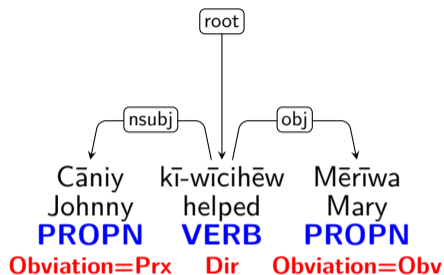

## Direct-Inverse Voice in Plains Cree

Animacy hierarchy: 1st person > 3rd person  
Should we set **nsubj** > **obj**?

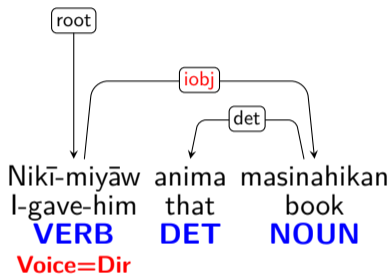

# Direct-Inverse Voice in Plains Cree

## Plains Cree Ditransitive Clauses

The **theme** (not the recipient) is indirect object because it is not cross-referenced on the verb (it is **inanimate**, while the verb references an animate object).

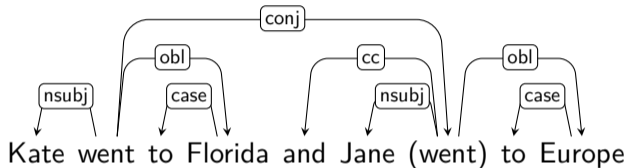

**Universal Dependencies**  
Ellipsis and Enhanced UD

## 1 Constituents vs. Dependencies

## 2 Universal Dependencies

# Enhanced Dependencies: Relative Clauses

# Basic Universal Dependencies: 138 (136) Languages and Growing

■ **I.-E.:**  Armenian (+West),  Greek (+Ancient),  Albanian,  Gheg,  Hittite,  Breton,  Irish,  Manx,  Scottish,  Welsh,  Afrikaans,  Danish,  Dutch,  English,  Faroese,  Frisian,  German,  Gothic,  Icelandic,  Low Saxon,  Norwegian,  Swedish,  Swiss German,  Catalan,  French,  Galician,  Italian,  Latin,  Ligurian,  Neapolitan,  Old French,  Portuguese,  Romanian,  Spanish,  Umbrian,  Belarusian,  Bulgarian,  Church Slavonic,  Croatian,  Czech,  Old Russian,  Polish,  Pomak,  Russian,  Serbian,  Slovak,  Slovenian,  Ukrainian,  Upper Sorbian,  Latvian,  Lithuanian,  Kurmanji,  Persian,  Khunsari,  Nayini,  Soi,  Urdu,  Hindi,  Kangri,  Bhojpuri,  Bengali,  Marathi,  Sinhala,  Sanskrit ■ **Dravidian:**  Malayalam,  Tamil,  Telugu ■ **Uralic:**  Erzya,  Estonian,  Finnish,  Hungarian,  Karelian,  Livvi,  Komi Permyak+Zyrian,  Moksha,  Sámi North+Skolt ■ **Turkic:**  Kazakh,  Old Turkish,  Tatar,  Turkish,  Uyghur,  Yakut ■  Buryat ■  Xibe ■  Korean ■  Japanese ■ **Sino-T.:**  Cantonese,  Classical Chinese,  Chinese ■ **Tai-Kadai:**  Thai ■ **Aus.-As.:**  Vietnamese ■ **Austron.:**  Indonesian,  Javanese,  Tagalog,  Cebuano ■ **Pama-Nyu.:**  Warlpiri ■ **Chu.-Kam.:**  Chukchi ■ **Esk.-Al.:**  Yupik ■ **U.-Az.:**  Nahuatl ■ **Mayan:**  Kiche ■ **Arawakan:**  Apurinã ■ **Arawan:**  Madi ■ **Tupian:**  Akuntsu,  Guajajara,  Kaapor,  Karo,  Makurap,  Mundurukú,  Nheengatu,  Tupinambá,  Mbyá,  Guaraní,  Teko ■ **M.-Je:**  Xavante ■ **Af.-As.:**  Akkadian,  Amharic,  Arabic Standard+Levantine,  Assyrian,  Beja,  Coptic,  Hebrew (+Ancient),  Maltese,  Zaar ■ **Niger-Congo:**

## Summary

- Constituent (phrase) trees ... context-free grammar
- Dependency trees (or graphs)
  - Nonprojective dependencies
- Universal Dependencies
  - Unified annotation for all languages
    - Language-specific extensions
  - Content words higher than function words ... better parallelism
  - Clauses – nominals – modifier words
  - Core arguments vs. oblique dependents
